It must be clearly understood that the percentages stated above are only indicative and not absolute. These proportions can vary substantially depending upon the perception of the fund manager; the intention being at all times to seek to protect the interests of the Unit holders. Such changes in the investment pattern will be for short term and for defensive considerations only. In case of deviation, the portfolio would be rebalanced within 7 days from the date of deviation

B. WHERE WILL THE SCHEME INVEST?

The Scheme will invest in following instruments:

- Debt instruments & Money Market instruments
- Units of Mutual Fund Schemes

The Scheme shall invest in any other instruments as may be permitted by SEBI/RBI from time to time.

Kindly refer detailed definitions and applicable regulations/guidelines for each instruments in the Section II.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The scheme follows an active investment strategy.

The investment objective of the Scheme is to generate returns by investing primarily in debt and money market instruments with overnight maturity.

The total assets of the Scheme will be invested in debt securities and money market instruments maturing on or before next Business Day. In case of securities with put and call options (daily or otherwise) the residual maturity (deemed or actual) shall be on or before the next Business Day. Investments under the Scheme would be made predominantly in Tri Party Repos, overnight reverse repos and fixed income securities/instruments with a residual maturity of 1 business day.

The Scheme may also invest in units of Overnight Schemes of other mutual funds.

The investment team of the AMC will carry out rigorous in depth credit evaluation of the money market and debt instruments proposed to be invested in. The credit evaluation will essentially be a bottom up approach and include a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term / long term financial health of the issuer.

PORTFOLIO TURNOVER

The Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager these opportunities can be played out to enhance the total return of the portfolio, which will result in increase in portfolio turnover. Fund Manager will seek to maximize the returns by taking advantage of swift moves in the market and can further increase the turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

For details pertaining to Risk Controls and Risk Mitigation refer Point no. C Part I of Section II of the Scheme Information Document.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

For details refer Point no. VII – Part I - Section I of the Scheme Information Document.

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. Separate NAV will be calculated and disclosed for each Option.

The NAVs will be calculated and disclosed on all the Calendar Days.

Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

Particulars	Amount in Rs
Market or Fair Value of Scheme's Investments.... (A)	10,00,00,000.00
Add: Current Assets including Accrued Income... (B)	75,34,345.00
Less: Current Liabilities and Provisions. (C)	(30,00,000.00)
Net Assets (A+B-C)	10,45,34,345.00

No. of Units outstanding under Scheme on the Valuation Day: 100,00,000

The NAV per unit will be computed as follows: 10,45,34,345.34 / 100,00,000 = Rs. 10.4534 per unit (rounded off to four decimals)

The Mutual Fund will ensure that the Redemption Price will not be lower than 95% of the Applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI

To further illustrate in rupee terms the above, for the Scheme under reference, suppose an Investor invested Rs. 10,000/- (after deduction of stamp duty and transaction charges, if any) under the Growth Option, the impact of expenses charged will be as under:

Sr. No.1	Particulars	Regular Plan	Direct Plan
A.	Amount invested at the beginning of the year (Rs.)	10,000	10,000
B.	Returns before expenses (Rs.)	1,500	1,500

E.	Returns after expenses at the end of the year (Rs.) [B – (C + D)]	1300	1450
	Returns after expenses at the end of the year (in %) [(E/A) – 1]	13%	14.5%

Note(s):

- The purpose of the above illustration is purely to explain the impact of expense ratio charged to the Plan(s) under the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan of the Scheme will be lower to the extent of the distribution expenses/commission
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to seek appropriate advice.

The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Section II

I. Introduction

A. Definitions/interpretation

For details refer website of Axis Mutual Fund: <https://www.axismf.com/statutory-disclosures>

B. Risk factors

Scheme Specific Risk Factors

Risks associated with investments in Fixed Income Securities

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds, money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Schemes' investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Risks associated with Repo transactions in Corporate Bonds

The Scheme may be exposed to counter party risk in case of repo lending transactions in the event of the counterparty failing to honour the repurchase agreement. However, in repo transactions, the collateral may be sold and a loss is realized only if the sale price is less than the repo amount. The risk is further mitigated through over-collateralization (the value of the collateral being more than the repo amount).

Risks associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

C. Risk mitigation strategies

Risk Control:

Risk management is going to be an integral part of the investment process. Effective risk management is critical to fund management for achieving financial soundness. The investment team of the AMC will carry out rigorous in depth credit evaluation of the money market and debt instruments (other than G-Secs) proposed to be invested in. The credit evaluation will essentially be a bottom up approach and include a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term / long term financial health of the issuer. The AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process, which would be periodically evaluated. The scheme will also use derivatives and other hedging instruments, as may be permitted by RBI, from time to time, in order to protect the value of the portfolio. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has implemented the Bloomberg Portfolio Order Management System as Front Office System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

Risk control measures with respect to Debt & Money Market Instruments

Market Risk / Interest Rate Risk: Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The price movement up and down in fixed income securities will lead to possible movements in the NAV.

Mitigation - In a rising interest rates scenario the scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.

Credit risk or default risk: It refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Mitigation- Apart from the basic examination, management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower.

Liquidity Risk Management Framework

Potential Risk Matrix (PRC) & Risk-o-meter: Investors are requested to review this scheme's Potential Risk Matrix (PRC) to understand the maximum risk that this scheme will run as per design and & Risk-o-meter to understand periodical measurement of that risk on a regular basis. Investors are suggested to read about various disclosures under the section "PERIODIC DISCLOSURES" pertaining to "Potential Risk Class Matrix" &

“Risk-o-meter” to understand in detail the disclosure frequency and remedial measures in case of breaches in the boundaries.

Liquidity risk management framework: AMC has put in place a liquidity risk management policy in accordance with SEBI circular and AMFI guidelines (issued from time to time) which monitors liquidity risk for all its open ended debt schemes (except overnight fund, gilt fund and gilt fund with 10 year constant duration). The Key objectives of the liquidity risk management is primarily to help estimate liquidity requirement by determining liquidity risk arising from the liability side under stressed market conditions in order to honor its redemption requests.

As per the prescribed guidelines, the liquidity ratios are calculated and liquid assets are maintained on a daily basis at scheme level for all mandated schemes. These ratios address the potential liquidity risk scenarios up to agreed confidence interval and has mandated remedial measures both for managing the risk on an ongoing basis (LRaR & LCRaR) as well as action plan in case there is a difference between actual outcome and projected outcome. Further, the AMC monitors asset-liability mismatch requirement which addresses potential liquidity requirement over a 90-day period and relevant asset side liquidity to be maintained as prescribed by the SEBI circular.

Investors can refer to the circular 135/ BP/93/ 2021-22 dated July 24, 2021 and subsequent circulars for detail understanding on the Liquidity Risk Management Framework.

Stress testing the scheme portfolio: The investment manager periodically stress tests the scheme portfolio to address the asset side risk from an Interest Rate, Credit and Liquidity Risk perspective at an aggregate portfolio level and evaluate the stress in terms of its impact on the NAV of the scheme. The stress test is performed using the methodology and periodicity as mandated by AMFI in consultation to SEBI.

Swing Pricing: The AMC has a Swing Pricing policy in place to help in case of severe liquidity stress at an AMC level or a severe dysfunction at market level, the Swing Pricing offers the contingency plan in case of extreme exigencies. Investors are suggested to read the detail disclosure pertaining to this policy in “Swing Pricing Framework”.

The Scheme may undertake repo or reverse repo transactions in accordance with the directions issued by RBI and SEBI from time to time. Such investment shall be made subject to the guidelines which may be prescribed by the Board of Directors of the Asset Management Company and Trustee Company.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market, consists of G-Sec outstanding of Rs. 80,59,921.302cr as on Feb 28, 2022 (State Govt securities - Rs 38,31,895.100 cr, (as on Feb'21) Source: CCIL), is the oldest and the largest component (50% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri Party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated

on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing on September 30, 2024 on some of the instruments and further illustrates this point.

Instrument	Current Yield range (%)
Tri-party Repo	6.50-6.60
Repo	6.50-6.60
3M T-bill	6.65-6.70
1Y T-bill	6.50-6.55
10Y G-sec	6.75-6.80
3m PSU Bank CD	7.00-7.10

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

18. The Scheme shall participate in repos in corporate debt securities as per the guidelines issued by SEBI and/ or RBI from time to time and the guidelines framed by the Board of Directors of Trustee Company and the Asset Management Company, from time to time. At present the following conditions and norms shall apply to repo in corporate debt securities:

- (i) The gross exposure of the Scheme to repo transactions in corporate debt securities shall not be more than 10 % of the net assets of the Scheme.
- (ii) The cumulative gross exposure through repo transactions in corporate debt securities along with equity, debt and derivatives shall not exceed 100% of the net assets of the Scheme.
- (iii) The Scheme shall participate in repo transactions only in AA and above rated corporate debt securities.
- (iv) The Scheme shall borrow through repo transactions only if the tenor of the transaction does not exceed a period of six months.
- (v) The Trustee and the Asset Management Company have framed guidelines inter alia considering the following aspects:
 - i. Category of counterparty
 - ii. Credit rating of counterparty
 - iii. Tenor of collateral
 - iv. Applicable haircuts
- (vi) Counterparty selection & credit rating
- (vii) The counterparty must be an acceptable counterparty for debt transactions. The Mutual Fund follows a counterparty empanelment process for fixed income transactions and the same shall be used for selection of counterparties for corporate bond repos. All repo transactions in corporate bonds will be governed by a repo agreement as specified by FIMMDA and / or other specified authorities.
- (viii) Collateral tenor & quality
The exposure limit/investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.
- (ix) Applicable haircuts
Currently mutual funds are permitted to carry out repo transactions in government securities without any haircuts. The Reserve Bank of India has notified a minimum haircut based on rating of the corporate bond and other securities. In addition, the Fixed Income and Money Market Dealers Association (FIMMDA) would maintain a rating-haircut matrix on an ongoing basis. The Scheme shall further follow guidelines framed by Trustee and the AMC from time to time.

The haircuts seek to protect the lender of funds from the event of the counterparty failing to honor the repurchase leg of the repo. In such a circumstance, the Fund would suffer a loss if the value of the collateral depreciates by more than the haircut. The fall in the value of the collateral could be on account of higher yields and/ or deterioration of credit quality.

As the typical tenor of repos is short (typically overnight), the haircuts represent a relatively high degree of safety in relation to the interest rate risk on the collateral. The risk of collateral depreciation based on historical volatility is given in the table below:

Bond Tenor (yrs.)	1	3	5	10
Price Volatility (%) (annualized)	0.6	1.2	1.7	3.4
Repo Tenor	Number of standard deviations needed to lose 10%			
1 day	258	136	94	48
7 days	98	52	36	18

In the above table, the price volatility of a 10-year bond is about 3.4% annualized. That is a 10% price move represents nearly a 3-sigma event on an annualized basis. For overnight tenors, this represents a 48-sigma event (for comparison a 6-sigma event occurs about once in a million observations).

It is apparent that the haircuts stipulated by RBI are more than sufficient to mitigate interest rate risk. Credit event risk remains (the collateral could default during the tenor of the repo). This risk is to be mitigated by ensuring that the collateral is acceptable from a credit point of view.

The exposure limit/ investment restrictions prescribed under the Seventh Schedule of the Regulations and circulars issued there under (wherever applicable) shall be applicable to repo transactions in corporate bonds.

19. The Mutual Funds can participate in repos on following corporate debt securities:

- (i) Listed AA and above rated corporate debt securities
- (ii) Commercial Papers (CPs) and Certificate of Deposits (CDs)

For the purpose of consideration of credit rating of exposure on repo transactions for various purposes including for Potential Risk Class (PRC) matrix, liquidity ratios, Risk-o-meter etc., the same shall be as that of the underlying securities, i.e., on a look through basis.

For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits

The Scheme will comply with the other Regulations applicable to the investments of Mutual Funds from time to time.

Apart from the investment restrictions prescribed under SEBI (MF) Regulations, the fund may follow any internal norms vis-à-vis limiting exposure to a particular scrip or sector, etc

All the investment restrictions will be applicable at the time of making investments.

The AMC/Trustee may alter these above stated restrictions from time to time to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for mutual funds to achieve its respective investment objective.
