I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

1. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme.
4. UTI-Fixed Term Income Fund - Series XXXI - XV (1099 days) (UTI-FTIF-Series XXXI - XV (1099 days)) is only the name of the scheme and does not in any manner indicate either the quality of the scheme or its future prospects or returns. There may be instances where no dividend distribution could be made.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of ₹10,000/- made by them towards setting up the Fund.
6. **The present scheme is not a guaranteed or assured return scheme.**
7. Statements/Observations made in this Scheme Information Document are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, dividend and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures.
10. Mutual Funds and securities investments are subject to market risks and the NAVs of the units issued under the scheme may go up or down depending on the factors and forces affecting the capital markets.
11. The Scheme is not guaranteeing or assuring any dividend. The Scheme is also not assuring that it will make periodical dividend distributions, though it has every intention of doing so. All dividend distributions are subject to the availability of distributable surplus of the Scheme.
12. **Credit Risk:** Bonds /debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit/ default risk in view of the sovereign status of the issuer.
13. **Interest-Rate Risk:** Bonds/ Central Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI and the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and

the increase or decrease in the level of interest rates. The prices of Bonds/Central Government securities are also influenced by the liquidity in the financial system and/or the open market operations (OMO) by RBI. Pressure on exchange rate of the Rupee may also affect security prices. Such rise and fall in price of bonds/central government securities in the portfolio of the schemes may influence the NAVs of the schemes as and when such changes occur. For a fixed term scheme, where the maturity of the debt securities in the portfolio are in line with the maturity period of the respective schemes, the interest rate risk may not be there, if the investment is held upto maturity.

14. **Price Risk:** As long as the scheme will be invested, their Net Asset Value (NAV) is exposed to market fluctuations, and their value can go up as well as down. The portfolio of fixed-income securities that the Scheme invest in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions. In general, price of fixed-income securities go up when interest rates fall, and vice versa.
15. **Liquidity Risk:** The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the schemes might have to incur a significant “impact cost” while transacting large volumes in a particular security. A lower level of liquidity affecting an individual security (ies) or an entire market may have an adverse bearing on the value of the Scheme’s assets. This may more importantly affect its ability to sell particular securities with minimal impact cost as and when necessary to meet requirement of liquidity or to sell stocks in response to triggers such as a specific economic/corporate event. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few of the investments.
16. **Risks relating to duration:** Fixed Income securities of any issuer that has higher duration could be more risky in terms of price movements relative to those with lower duration. Thus any impact of interest rate changes would be higher on securities with higher duration irrespective of the status of the issuer of the security.
17. **Non-diversification Risk:** The scheme may pursue a reasonable degree of diversification adhering to the SEBI guidelines on limits for investments in a single sector, limits on investments in securities issued by a single issuer etc. It may invest a greater proportion of assets in the securities of one issuer / single sector (within the limit permitted by regulation) as compared to a diversified fund. This could have implications for the performance of the Scheme. The Scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the Scheme.
18. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
19. **Money Market Securities** are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
20. **Trading in derivatives involves certain specific risks like:**
 - a. **Credit Risk:** This is the risk of default by the counter party. This is usually to the extent of difference between actual position and contracted position. This risk is substantially mitigated where derivative transactions happen through clearing corporation.
 - b. **Market Risk:** Market movement may also adversely affect the pricing and settlement of derivative trades like cash trades.
 - c. **Illiquidity Risk:** The risk that a derivative product may not be sold or purchased at a fair price due to lack of liquidity in the market.

- d. An exposure to derivatives can lead to losses. Success of dealing in derivatives depends on the ability of the fund manager to correctly assess the future market movement and in the event of incorrect assessment, if any, performance of the schemes could be lower.
- e. Interest Rate Swaps (IRSs) and Forward Rate Agreements (FRAs) do also have inherent credit and settlement risks. However, these risks are substantially less, as they are limited to the interest stream and not the notional principal amount.
- f. Participating in derivatives is a highly specialised activity and entails greater than ordinary investment risks. Notwithstanding such derivatives being used for limited purpose of hedging and portfolio balancing, the overall market in these segments could be highly speculative due to the action of other participants in the market.
- g. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- h. The risk associated with the use of derivatives are different from or possibly greater than, the risk associated with investing directly in securities and other traditional investments.
- i. Risk associated with imperfect hedging:**

Basis risk is the risk associated with imperfect hedging. It arises because of the difference between the price of the asset to be hedged and the price of the asset serving as the hedge, or because of a mismatch between the expiration date of the hedge asset and the actual selling date of the asset (calendar basis risk).

Under these conditions, the spot price of the asset, and the futures price, do not converge on the expiration date of the future. The amount by which the two quantities differ measures the value of the basis risk. That is,

Basis = Futures price of contract – Spot price of hedged asset.

For example, in the attempt to hedge against a three-year bond with the purchase of Treasury bill futures, there is a risk the Treasury bill and the bond will not fluctuate identically.

21. Scheme Specific Risk Factors & Risk mitigation measures:

- a. The value of the Scheme's investments, may be affected generally by factors affecting securities markets, such as interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments, a specific sector or all sectors including debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

As the scheme is close ended, the assets that mature on or before the date of maturity of the scheme are purchased immediately after the New Fund Offer and are normally held till the maturity of the scheme thereby nearly eliminating interest rate risks. Thus the impact of risk factor mentioned above would be minimal.

- b. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The inability of the Scheme to make intended securities purchases due to settlement problems could also cause the Scheme to miss certain investment

opportunities. By the same rationale, the inability to sell securities held in the Scheme's portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the Scheme's portfolio.

- c. Though it is the endeavor of fund manager to invest in debt securities maturing in line with the maturity of the respective Scheme there could be instances of not finding debt instruments with appropriate maturity date and hence there may be reinvestment risk. Investments in debt instruments are subject to reinvestment risks as interest rates prevailing on interest or maturity due dates may differ from the original coupon of the bond, which might result in the proceeds being invested at a lower rate.
- d. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may choose to invest in unlisted securities that offer attractive yields. This may however increase the risk of the portfolio.
- e. The Scheme may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives.
- f. The scheme intends to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the scheme will be subject to credit risk as well as settlement risk, which might effect the liquidity of the scheme.

As the said scheme is a close ended scheme with no redemption till maturity, the risk factors mentioned in Point No. b to d above, will be minimal.

Interest Rate Risk / Reinvestment Risk: Scheme would manage the interest rate risk & reinvestment risk by adequately matching the duration of assets in line with the duration of the scheme.

Credit Risk: Scheme would predominantly invest in highly rated securities where there is an internal credit comfort which would reduce the probability of credit risk.

Concentration Risk: The scheme would have modest presence of issuers with reasonable limits which would mitigate the credit concentration risk.

Portfolio Risk: By monitoring the return deviation and adequately managing all the above risks namely interest rate risk, reinvestment risk & credit cum concentration risk the scheme would mitigate the overall portfolio risk.

- g. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.
- h. Redemption will be done on the maturity date at the Net Asset Value on the date of maturity. As per SEBI guidelines, the AMC/MF shall not redeem the units of the Plan before the date of maturity. Redemption will be done on the maturity date at the Net Asset Value on the date of

maturity. As per SEBI guidelines, the AMC/MF shall not redeem the units of the scheme before the date of maturity.

22. Risk associated with Close Ended Scheme

In a close ended scheme, redemption / repurchase shall not be allowed prior to maturity of the Scheme. Redemption will be allowed only on maturity of the Scheme. Scheme will mature at the end of the close ended period. For liquidity purpose units of the scheme are to be listed on Stock Exchange. Investors who wish to trade on the exchange and Investors wishing to exit / redeem before the scheduled maturity may do so through stock exchange mode where the scheme will be listed. For the units listed on the exchange it is possible that the market price at which the units are traded may be at a discount to the NAV of such Units and investor may not get the desired return. Also there may not be sufficient liquidity on the stock exchange for the investors to exit from the stock exchange mode.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. These conditions will be complied with immediately after the close of the NFO itself i.e. at the time of allotment. In case of non-fulfillment with the condition of minimum 20 investors, the Scheme shall be wound up in accordance with Regulation 39 (2) (c) of SEBI (MF) Regulations automatically without any reference from SEBI. In case of non-fulfillment with the condition of 25% holding by a single investor on the date of allotment, the application to the extent of exposure in excess of the stipulated 25% limit would be liable to be rejected and the allotment would be effective only to the extent of 25% of the corpus collected. Consequently, such exposure over 25% limits will lead to refund within 5 business days of the date of closure of the New Fund Offer.

5) Debt market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	:	Stated value of the paper /Principal Amount
Coupon	:	Zero; fixed or floating
Frequency	:	Semi-annual; annual, sometimes quarterly
Maturity	:	Bullet, staggered
Redemption	:	FV; premium or discount
Options	:	Call/Put
Issue Price	:	Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Long Term Debt market in India comprises mainly of two segments *viz.*, the Government securities market and the corporate securities market.

Government securities include central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple Price' method while State Govt are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and of late Mutual Funds have also started hedging their exposures through these products.

(iii) Regulators:

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment Facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of security issuance and eligible investors:

Issuer	Instruments	Yields (as on 22.04.2019)	Maturity	Investors
Central Government	Dated Securities	6.56% - 7.74%	1-30 years	Banks, Insurance Co, PFs, MFs, PDs, Individuals, FPI
Central Government	T-Bills	6.42% - 6.32%	364/91 days	Banks, Insurance Co, PFs, MFs, PDs, Individuals, FPI
State Government	Dated Securities	8.20% - 8.25%	10 years	Banks, Insurance Co, PFs, MFs, PDs, Individuals
PSUs Corporates	Bonds	7.95% - 8.55%	5-10 years	Banks, Insurance Co, PFs, MFs, PDs, Individuals, FPI
Corporates (AAA rated)	Bonds	7.90% - 8.75%	1-10 years	Banks, MFs, Corporates, Individuals, FPI
Corporates	Commercial Papers	6.95% - 7.85%	15 days to 1 year	Banks, MFs, Fin Inst, Corporates, Individuals, FPIs
Banks	Certificates of Deposit	6.85% - 7.70%	15 days to 1 year	Banks, Insurance Co, PFs, MFs, PDs, Individuals
Banks	Bonds	8.60% - 8.65%	10-15 years	Banks, Companies, MFs, PDs, Individuals

(vi) Trading Mechanism:

Government Securities and Money Market Instruments

Currently, G-Sec trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in Government Securities owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

D. WHERE WILL THE SCHEME INVEST?

1. As per Regulation 43(1) of SEBI (Mutual Fund) Regulations, the corpus of the scheme can be invested in any (but not exclusively) of the following instruments.
 - ★ Securities issued /guaranteed by the Central, State, and Local governments (including but not limited to coupon bearing bonds, Zero coupon bonds and treasury bills).
 - ★ Corporate debt (Public & private sector).

- ★ Debt instruments of domestic government agencies and statutory bodies which may or may not carry a central /state govt. guarantee [including but not limited to Municipalities, Public Sector Undertakings, and State Electricity Boards (SEBs).
- ★ Bonds issued by Banks (public & private sector) and Financial Institutions.
- ★ Money market instruments as permitted by SEBI and or RBI (including CPs, CDs and Triparty Repos).
- ★ Securities with floating rate instruments.
- ★ Derivative instruments as permitted by SEBI/RBI.
- ★ Any other instruments as may be permitted by RBI/SEBI/other Regulatory authorities from time to time.

The securities as mentioned above could be listed, unlisted, privately placed, secured, unsecured, rated or unrated (post investment in portfolio) and of any maturity. The securities may be acquired through initial public offers, private placements, secondary market transactions, rights offer or negotiated deals.

2. Participating in Derivative Products:

- (i) The scheme may use hedging techniques including dealing in derivative products - like futures and options, warrants, interest rate swaps (IRS), forward rate agreement (FRA) as may be permissible under SEBI (MFs) Regulations.
- (ii) The scheme may take derivatives position based on the opportunities available and in line with the overall investment objective of the scheme. These may be taken to hedge the portfolio and rebalance the same.
- (iii) The value of derivative contracts outstanding at any point of time will comply with overall limits and norms of SEBI Circular No Cir / IMD / DF / 11 / 2010 dated August 18, 2010 and SEBI/HO/IMD/DF2/CIR/P/2017/109 dated September 27, 2017.
- (iv) Derivatives: A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, fixed income index (if any), interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Swaps:

The exchange of a sequence of cash flows that derive from two different financial instruments. For example, the party receiving fixed in an ordinary Interest Rate Swap receives the excess of the fixed coupon payment over the floating rate payment. Of course, each payment depends on the rate, the relevant day count convention, the length of the accrual period, and the notional amount.

Illustration for Interest Rate Swap:

In a plain vanilla fixed-to-floating interest rate swap, party A makes periodic interest payments to party B based on a variable interest, say MIBOR plus 50 basis points. Party B in turn makes periodic interest payments based on a fixed rate of say 6%. The payments are calculated over the notional amount. The first rate is called variable, because it is reset at the beginning of each interest calculation period to the then current reference rate, such as say MIBOR.

The scheme may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions will be an entity recognised as a market maker by RBI. Further the value of the notional principal in such cases will not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counter party in such transactions will not exceed 10% of the net assets of the scheme.

The Fund may use derivative instruments like Fixed Income Index (if any), Futures, Interest Rate Swaps and Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing, as permitted under the Regulations and guidelines from time to time.

Some of the derivative techniques/ strategies that may be used are:-

- (i) The scheme may use hedging techniques including dealing in derivative products - like futures and options, warrants, interest rate swaps (IRS), forward rate agreement (FRA) as may be permissible under SEBI (MFs) Regulations.
- (ii) The scheme may take derivatives position based on the opportunities available and in line with the overall investment objective of the scheme. These may be taken to hedge the portfolio and rebalance the same.

Exposure limits as per SEBI Circular No. Cir/IMD/DF/11/2010 dated 18th August 2010 & SEBI Circular No. Cir H.O./IMD/DF2/CIR/P/2017/109 dated 27th September 2017:

- a. The total investments in debt, money market instruments and derivatives shall not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- e. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

Definition of Exposure in case of Derivative Positions

- h. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- i. (i) To reduce interest rate risk a scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in

IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$

- (ii) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (iii) Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:

- a. Exposure to IRFs is created **only for hedging** the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- b. Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (*excluding the hedged portions, if any*) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of Para 3 of SEBI circular dated August 18, 2010. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- i. *The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or*
- ii. *The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.*
- c. At no point of time, the net modified duration of part of the portfolio being hedged should be negative.
- d. The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of Para 3 of SEBI circular dated August 18, 2010.
- (iv) The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

- (v) The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

E. WHAT ARE THE INVESTMENT STRATEGIES?

The scheme would invest in a diversified portfolio of various rated papers i.e., corporate bonds, debentures, etc. which mature on or before the date of maturity of the scheme. As the scheme is a close ended fund with no regular inflows and as redemption is not allowed till maturity, the portfolio normally constructed in the beginning for the tenure of the scheme would have low portfolio turnover. The locked-in portfolio would nearly eliminate interest rate risks providing a potential opportunity for better returns.

Portfolio Turnover Policy:

Definition of Portfolio Turnover - Portfolio Turnover is defined as the least of purchase or sales as a percentage of average size of a fund during any specified period of time. As sales and purchases of securities can be made on daily basis, it would be difficult to estimate with reasonable level of accuracy the likely turnover in portfolios. There could be instances of churning of portfolio to take advantage of trading opportunity existing in the market. But it would be difficult to set the target for the portfolio turnover as it would be a function of purchases/redemptions, general market conditions, trading opportunities, creation of liquidity to meet income distribution etc. The portfolio turnover shall be targeted so as to have return maximisation for the unitholders. At the same time, expenses such as brokerage and transaction cost shall be kept at low level so that it does not affect the earnings of the scheme.

For this Scheme

In view of the nature of the Scheme as there are no purchases/redemptions during the tenure of the Scheme and as the portfolio of the Scheme is maturing on or before the duration of the scheme, there will be low portfolio turnover for the Scheme.

<p>Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)</p>	<p>FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents (“US persons” as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant.</p> <p>FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts.</p> <p>The identification of US person will be based on one or more of following “US indicia”-</p> <ul style="list-style-type: none"> • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. <p>FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary</p>

	<p>by the AMC / Fund in accordance with the Applicable Laws.</p> <p>FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously.</p> <p>In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date.</p> <p>Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI).</p> <p>All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form.</p> <p>AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above.</p> <p>Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to AMFI’s Circular No.135/BP/63/2015-16 dated 18th September 2015 and SEBI Circular Nos.
