The Fund Manager reserves the right to invest in such securities as maybe permitted from time to time and which are in line with the investment objectives of the Scheme.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme follows an active investment strategy.

The Scheme will seek to generate reasonable returns while assuming low risk and concurrently ensuring a high degree of liquidity in the portfolio of the Scheme. The Scheme will invest in Debt Securities and Money Market Instruments with maturity upto 1 business day only. The Scheme may also invest in liquid funds for overnight deployment.

The investment team of the AMC will, as a mitigation and risk control procedure, carry out rigorous credit evaluation of the issuer company proposed to be invested in. The credit evaluation will analyse the operating environment of the issuer, the sector analysis, business model, management, governance practices, quality of the financials, the past track record as well as the future prospects of the issuer and the financial health of the issuer.

Portfolio Turnover:

The Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager these opportunities can be played out to enhance the total return of the portfolio, which will result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable measure accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

Risk Control:

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Since investing requires disciplined risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process. The risk control process involves reducing risks through portfolio diversification; The AMC believes that this diversification would help achieve the desired level of consistency in returns. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. AMC has implemented a robust as Front Office System (FOS) for this purpose The system has incorporated all the investment restrictions as per SEBI guidelines and “soft” warning alerts at appropriate levels for preemptive monitoring.

The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyses the same and acts in a preventive manner.

Risk Management Framework to mitigate Liquidity Risk

Liquidity is a measure of ease with which an asset can be liquidated without experiencing material exit barriers or considerable loss of value. Further, Liquidity Risk or mismatch for the Scheme could be defined as a situation where meeting its financial obligations could be uncertain. The AMC has adopted a comprehensive liquidity risk management framework in accordance with the extant regulatory framework, to mitigate potential mismatches between the Scheme’s assets and liabilities in order to protect the interest of investors of the Scheme.

Some of the liquidity management tools which also encompass applicable regulatory requirements, implemented by the AMC are listed below:

Liquidity Ratios – One of the factors determining the liquidity of the Scheme is the composition of its portfolio in terms of its assets as different types of instruments exhibit different market depths. The AMC endeavors to ensure that the Scheme is invested in securities with sufficient liquidity by maintaining prescribed liquidity ratios. The asset size, potential heightened redemptions evolving from historical redemption statistics and concentrations of investors and distributors determine these liquidity ratios thus looking at the asset side liquidity in conjunction with the liability side. The ratios are reset and monitored on timely basis by the AMC in line with the applicable regulatory requirements.

Calculating and monitoring the Liquidity Ratios defines Liquidity Risk arising from the liability side and covers all potential liquidity risk scenarios upto 99% confidence interval. It also has remedial

measures both for managing this risk on an ongoing basis (LR-RaR & LR-CRaR) as well as action plan in case there is a difference between actual outcome and projected outcome.

For more details, please refer Point no. A “HOW WILL THE SCHEME ALLOCATE ITS ASSETS?” of Part II – “INFORMATION ABOUT THE SCHEME” under Section I.

Potential Risk Class (PRC) Matrix and Risk-o-meter The liquidity of the fund is also impacted by its duration and credit profile. The fund is classified in terms of the PRC matrix and risk-o-meters for the fund and its benchmark. This is done considering the allowable thresholds of interest rate risk and credit risk as per regulations. The PRC matrix and risk-o-meter of the fund are monitored on timely basis to ensure that the fund is operating within its interest rate and credit risk appetite. Remedial measures to treat exceptions have been put in place by the AMC.

- a) **Stress Testing** – The ability of the fund to generate liquidity is impacted by the dynamic liquidity conditions in the market. Hence it is not prudent to assume that normal stress-free environment shall always prevail in the market. The AMC monitors impact of adverse events in terms of interest rate risk, liquidity risk and credit risk on the NAV of the fund. The portfolio of the fund is subjected to stress defined by the above and the impact on the fund NAV is compared against dynamic thresholds on timely basis. Deviations if any are addressed according to the regulations to ensure the portfolio is sufficiently prepared to better handle such unprecedented shocks.
- b) **Bucketing of Assets and Liabilities** – Liquidity of the fund is subject to test if there is a mismatch between the residual maturity of its assets and the redemptions faced by the fund. Therefore, the assets of the fund are segregated into maturity buckets are compared against the thresholds determined in accordance with maximum drawdown experienced by the fund.

Concentration Monitoring – Higher concentration of investors or distributors in a Scheme could culminate into sizable redemptions which may be difficult to manage if the Scheme portfolio is not prepared. The AMC monitors the concentration at investor and distributor level and its trend over a period of time to detect potential concerns of large redemptions.

With all the above-mentioned tools and processes in place which aim to protect the interest of the investors of the fund, the AMC has incorporated a robust liquidity risk management framework.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark (Total Returns Index): CRISIL Liquid Overnight Index (First Tier Benchmark)

The Scheme intends to invest predominantly in overnight debt and money market instruments which are mainly captured by benchmark index and hence the index is an appropriate benchmark for the Scheme.

The Trustee reserves the right to change the benchmark for the evaluation of the performance of the Scheme from time to time, keeping in mind the investment objective of the Scheme and the appropriateness of the benchmark, subject to the Regulations and other prevalent guidelines.

PART III – OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme for each option will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Eighth Schedule of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

$$\text{Nav per unit (Rs.)} = \frac{\text{(Market / Fair Value of Scheme's Investments + Current Assets including Accrued Income - Current Liabilities and Provisions)}}{\text{No. of units outstanding under the Scheme / Option on the valuation day}}$$

The NAV shall be calculated/rounded up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the Income Distribution cum Capital Withdrawal/IDCW Option will be different after the declaration of the first IDCW. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

Illustration on Computation of NAV for a Scheme has been provided below:

Particulars	Amount in Rs
Market or Fair Value of Scheme's investments	2,00,00,000.00
Current Assets including accrued income	15,00,000.00
Current Liabilities and Provisions	5,00,000.00

No. of Units outstanding under the Scheme = 6,80,000.000

The NAV per unit will be computed as follows:

$$\text{NAV per unit (Rs.)} = \frac{2,00,00,000.00 + 15,00,000.00 - 5,00,000.00}{6,80,000.000}$$

NAV per unit (Rs.) = 30.8824

Note : The aforesaid provisions pertaining to “Calculation of NAV” shall apply in respect of each individual Scheme and/or plan as the case may be. The NAV per unit above is rounded off to four decimals.

• Methodology of calculating the sale price

The price or NAV a unitholder is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to Pursuant to clause 10.4.1.(a) of the SEBI Master Circular, no entry load will be charged by the Scheme to the unitholders.

Therefore, Sale / Subscription price = Applicable NAV

- **Methodology of calculating the repurchase price**

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the “Applicable NAV” to calculate the repurchase price.

Therefore, Repurchase / Redemption Price = Applicable NAV *(1 – Exit Load, if any)

For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the Unitholder redeems units before completion of 1 year, then the repurchase/redemption price will be:

$$= \text{Rs. } 10 * (1 - 0.02)$$

$$= \text{Rs. } 9.80$$

As per regulation 49 (3) of the SEBI (MF) Regulations, while determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 95 per cent of the Net Asset Value.

For other details such as policies w.r.t computation of NAV, rounding off, investment in Foreign Securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

SECTION II

I. INTRODUCTION

A. DEFINITIONS

For details refer <https://www.mahindramanulife.com/downloads#mandatory-disclosures+-Scheme-Information-Document-Disclosures>

B. RISK FACTORS

i. STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

ii. SCHEME SPECIFIC RISK FACTORS

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

Risks associated with investments in Fixed Income Securities

- **Interest-Rate Risk:** Fixed income securities such as government bonds, corporate bonds, and money market instruments and fixed income derivatives run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.
- **Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.
- **Basis Risk:** Basis risk arises due to an unidentical in the price movement of the derivative vis-à-vis that of the security being hedged.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of

selling the security, the security can become less liquid, leading to loss in value of the portfolio.

- **Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is considered to be the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they are required to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- **Counterparty Risk:** - This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Risks associated with unrated instruments:** - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.
- **Duration Risk:** - Duration risk refers to the movement in price of the underlying invested money market / debt instruments due to movement/change in interest rates over different durations of maturity of instruments. In a portfolio of debt assets, the duration risk is measured by the average duration of the portfolio. Duration, expressed in years, is used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. Usually Individual duration of the fixed income instruments in the portfolio is calculated and the portfolio duration is the weighted average of such individual instrument duration. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.
- **Performance Risk** - Performance risk refers to the risk of a scheme being unable to generate returns matching / above the returns of the scheme's benchmark. It would also mean the scheme underperforming against its peer set of other mutual fund schemes having similar portfolios, scheme classification, objective, benchmark and asset allocation. The performance risk is a function of various variables which include interest rate movement and the associated price movement of the invested debt/money market instruments, the duration risk, the credit quality movement and the liquidity of the invested instruments. These risks could arise due to a variety of market and economic activities, government policies, global economic changes, currency fluctuations, tax policies, political changes, corporate actions and investors' behaviour.

Risk factors associated with repo transactions in Corporate Debt Securities

Counterparty Risk: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. Fund Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis and / or with regulated entities. In the event of default by the repo counterparty, the Scheme will have recourse to the corporate debt securities given as collateral to recover the investment by selling the collateral in the market. However, selling of collateral will also be subject to liquidity risk in the market and the Scheme may incur impact cost at the time of selling the collateral.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations or there is downward migration in rating of collateral. Further if the rating of collateral goes below the minimum required rating during the term of repo or collateral becomes ineligible for any reason, counterparty will be expected to substitute the collateral. In case of failure to do so, the AMC / Scheme will explore the option for early termination of the trade.

Risks associated with ‘Right to limit redemptions’

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph “Right to Limit Redemptions” for further details including the procedure to be followed while imposing restriction on redemptions.

Risks Factors associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control. Further, there is no guarantee about sufficient liquidity of units of the Scheme on stock exchange platforms(s).

C. RISK MITIGATION STRATEGIES

Risk is an inherent part of the investment function. The AMC has incorporated adequate safeguards to manage risk in the fund management process. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools.

Nature of Risk	Risk mitigation measures
Risks associated with Debt Securities and Money Market Securities	
Market Risk / Interest Rate Risk	In expectation of a rising interest rate scenario, the Scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent. The funds' duration could be actively managed, taking into account the investment strategy, applicable regulations, scheme objectives, and prevailing market and interest rate conditions.
Liquidity Risk	Liquidity Risk shall be addressed by monitoring the asset side secondary market liquidity in conjunction with the concentration and the profile of the liability side on timely basis. The liquidity risk will be managed and/or sought to be addressed by creating a portfolio which has adequate access to liquidity in the secondary market. The

	portfolio construction and management shall be executed in line with the Regulatory and internal guidelines for liquidity risk management. Creating portfolios that are diversified across maturities, ratings, types of assets, etc. in accordance with the fund objectives, regulations, and investing strategy could be a way to decrease liquidity risk.
Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit analyst will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, off-balance sheet exposures, notes, auditors' comments, disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap based on issuer ratings on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio. Further, there are firm wide issuer limits to keep credit risk under control through diversification.
Re-investment Risk	Reinvestment risk on intermittent cashflows received by the Scheme manifests during a falling interest rate scenario. While the Scheme would be subjected to reinvestment risk, it is also expected to benefit from the capital appreciation in fixed income instruments driven by falling interest rates. Reinvestment risk and interest rate risk for fixed income securities mitigate each other.

Fixed Income Markets in India

The Fixed Income markets in India can be broken down into three parts:

1. Debt Market.
2. Money Market.
3. Derivatives Market.

Debt Market: The debt market is active since the mid 1990s with the introduction of major reforms in the debt market such as the auction system for sale of dated government securities, establishing the system of primary dealers to name a few reforms. This market is predominantly gilt oriented and corporate papers became a part of it since late 1990s. Even today, the Government Securities (G-sec) segment is the largest segment in the debt market with an outstanding stock of Rs. 1,08,48,747.291 crore in September 2024. The Government securities market had a volume of Rs. 14,54,969 crore in August 2024 vs 12,76,082 crore in August 2019 (Source: The Clearing Corporation of India Ltd.).

The debt market consists of the following instruments:

- Government securities – Issued by the Government of India.
- State government securities – Issued by the State Government.
- Debt securities – Issued by various Corporate, Banks, Financial Institutions.
- Other approved securities like government guaranteed papers.

The nature of instruments is in the form of plain vanilla bonds, Floaters, Zero coupon bonds/deep discounted bonds, securitized papers and structured debt papers.

The major players in Indian debt market are Banks, Mutual Funds, Financial Institutions, Foreign Portfolio Investors, Primary Dealers, Insurance companies and others.

Money Market: The money market is a key component of the financial system as it is the fulcrum of monetary operations conducted by the Central Bank in its pursuit of monetary policy objectives. It is a market for short-term funds with maturity ranging from overnight to one year and includes financial instruments that are deemed to be close substitutes of money. Money market instruments facilitate borrowing for relatively short periods of time. They are generally issued at a discount to the maturity value.

The money market in India mainly consists of the following instruments:

- Call money market.
- Tri-party Repo (Treps)
- Treasury bills.
- Commercial papers.
- Certificates of deposits.
- Short Non-Convertible Debentures-fixed and floaters and term lending instruments.

RBI has been taking active steps to develop the money market in India with the objective to improve the signaling mechanism for monetary policy while ensuring financial stability. Various reform measures have resulted in a relatively deep, liquid and vibrant money market with a shift from administered and direct to indirect market based instruments of monetary management. For e.g. the call

money market was transformed into a pure interbank market, while other money market instruments such as market repo and TREPS were developed to provide avenues to non-banks, including mutual funds, for managing their short-term liquidity mismatches. For the fortnight ended September 30, 2024, the total amount outstanding of commercial papers (at face value) issued was Rs. 397590 crore, whereas the total amount outstanding of certificates of deposits issued by Banks was Rs. 474684 crore for the fortnight ended September 20, 2024 (Source-RBI).

The yield ranges (as on Oct 08, 2024) of various instruments mentioned above, and the factors affecting prices of such securities are given hereunder:

Instrument	Current Yield range (%)
Treps	6.17%-6.27%
Repo	6.27%-6.37%

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macroeconomic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

3. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems.

Such restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period.
