Flexi Systematic Transfer Plan (Flexi STP) available as Source and Destination Scheme

The facility of Flexi STP is introduced from Dec 18, 2019 wherein the unit holder(s) can opt to transfer an amount at regular intervals from a designated

	open-ended Scheme of UTI Mutual Fund (“Transferor Scheme”) herein after referred to as Source Scheme to the Growth Option of a designated, open-ended Scheme of UTI Mutual Fund (“Transferee Scheme”) hereinafter referred to as Destination Scheme. i. Available Mode: The Flexi STP Facility is available only for units held / to be held in Non-Demat Mode in the Source and the Destination Scheme. ii. Available Schemes: The Flexi STP will be available in all source schemes and for the destination schemes in which the Regular STP is allowed. List of Schemes is Annexed. iii. Limitation on Destination Scheme: Only one Flexi STP registration per destination scheme in a folio would be allowed. Though multiple Flexi STPs and / or Normal STPs are allowed in source schemes, only one Flexi STP or Normal STP will be allowed in the destination scheme. iv. Frequencies Available are Daily, Weekly, Monthly and Quarterly intervals. v. Date of transfer: Unitholders will be eligible to transfer a fixed amount on daily basis i.e. on every business day under Daily periodicity; on any pre-specified date under Weekly periodicity; Monthly periodicity and of the first month of each quarter, under Quarterly periodicity. If that day being a holiday, next business day would be considered for the transaction. However, if in any month, the Flexi STP date opted by the Investor is not available (Say, 29th & 30th in February and 31st in case of alternate months), then the Flexi STP for those dates shall be processed for the last available Business Day in that month. vi. Target Investment Value: In Flexi STP, transfers into the Destination Scheme from the Source Scheme are made to achieve the Total Target Investment Value in the Destination Scheme. The amount to be transferred will be arrived at on the basis of difference between the Target Investment Value and the Actual Market Value of the holdings in the Destination Scheme on the date of transfer. vii. First Flexi STP Instalment: The first Flexi STP instalment will be processed for the instalment amount specified by the Unit holder at the time of enrollment. From the second instalment, Flexi STP instalment will be higher of the instalment amount or the amount as derived by the formula stated below: $[(\text{Instalment amount}) \times (\text{Number of instalments including the current instalment})] - (\text{Market Value of the investments through FLEXI STP in the Destination Scheme on the date of transfer})$ viii. Total Amount Invested: The total amount invested through Flexi STP over its tenure in the Destination Scheme, may be higher or lower than the Total Target Investment Value of the investment i.e. the $[(\text{Instalment amount}) \times (\text{total number of instalments specified by the Unit holder})]$. This may be on account of fluctuations in the market value of the Destination Scheme. If Unit Holder decides to take up this facility, then he/she should be aware of the possibility, that the total amount invested through Flexi STP could be higher or lower than the Total Target Investment Value of the investment. ix. Minimum Amount, Frequency and Number of STPs: The minimum amount per Flexi STP instalment amount and number of STPs at the time of registration shall be as follows:
--	--

Frequency	Minimum Amount per Instalment	Minimum Number of Instalments
Daily	Rs.100 and in multiples of Re.1	20
Weekly & Monthly	Rs.1000 and in multiples of Re.1	6
Quarterly	Rs.3000 and in multiples of Re.1	2

- x. **Minimum Redemption Amount:** The provision of ‘Minimum Redemption Amount’ as specified in the Scheme Information Document(s) (SID) of the respective designated Source Scheme(s) and ‘Minimum Application Amount’ specified in the SID(s) of the respective designated Destination Scheme(s) will not be applicable for Flexi STP.
- xi. **Minimum Investment Amount for STP Activation:** Minimum amount of investment in case of new investment / Unit value in case of existing investment in the source scheme for registration of Flexi STP is **Nil**.
- xii. **Turnaround time for activation of STP:** All the Flexi STPs will be registered and activated on a T+1 business day basis from the date clear funds are available in the source scheme. T being the date on which clear funds are available.
- xiii. **Load Structure:** In respect of units created under Flexi STP enrolments, the Load Structure prevalent at the time of registration of the Flexi STP mandate shall govern the investors during the tenure of the Flexi STP.
- xiv. **Exit Load:** The transfer under the Flexi STP from the Source Scheme to the Destination Scheme will take effect by redeeming units of Source Scheme / Plan / Option at the Applicable NAV, after payment of Exit Load & TDS (In case of NRIs), if any, and subscribing to the units of the Destination Scheme at Applicable NAV.
- xv. **Termination of Flexi STP:** Flexi STP will be terminated in case any of the below reasons are met.
- The units balance becomes NIL in the Source Scheme or their value is lower than minimum amount to be transferred as stipulated.
 - Upon registration of Lien or Pledge or STOP against the Units in Source Scheme.
 - Upon receipt of intimation of death of the unit holder.
 - If the unit holder submits a duly signed request for termination of Flexi STP, such Flexi STP shall be cancelled on a T+1 basis on receipt of a valid request from the Unit Holder.
- xvi. The Trustee reserves the right to change/modify the terms and conditions of Flexi STP or withdraw the Flexi STP at a later date.

Use of Interest Rate Futures (IRFs)

As per provision no. 13.15.2 of para 13.15 under chapter 13 of SEBI Master Circular for Mutual Funds on 'Review of norms for participation in derivatives by Mutual Funds', it is proposed to use Interest Rate Futures (IRFs) for imperfect hedging against interest rate volatility by the scheme, subject to applicable investment limits. Some of the key points of circular are as follows:

- (a) To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price / Par Value})$$

- (b) At no point of time, the net modified duration of part of the portfolio being hedged shall be negative.

- (c) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (d) Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to certain conditions such as exposure to IRFs is created only for hedging, the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

Debt market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value : Stated value of the paper / Principal Amount
 Coupon : Zero, fixed or floating
 Frequency : Semi-annual, annual, sometimes quarterly
 Maturity : Bullet, staggered
 Redemption : FV, premium or discount
 Options : Call/Put
 Issue Price : Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on Government Securities or treasury bill, etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates,

public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

Securitised Debt Instruments – Asset securitization is a process of transfer of risk whereby commercial or consumer receivables are pooled packaged and sold in the form of financial instruments. A typical process of asset securitisation involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments to investors, which are rated by an independent credit rating agency. Bank, Corporates, Housing and Finance companies generally issue securitised instruments. The underlying receivables generally comprise of loans of Commercial Vehicles, Auto and Two wheeler pools, Mortgage pools (residential housing loans), Personal Loan, credit card and Corporate receivables. The instrument, which is issued, includes loans or receivables maturing only after all receivables are realized. However depending on timing of underlying receivables, the average tenure of the securitized paper gives a better indication of the maturity of the instrument.

(iii) Regulators

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Strategy:

i. Investment focus and asset allocation strategy:

The fund aims to generate optimal returns with low risk and high liquidity by investing atleast 80% of the portfolio in AA+ & above rated corporate bonds.

ii. Portfolio Turnover policy:

The scheme being an open-ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager these opportunities can be utilized to enhance the total return of the portfolio. The fund manager would endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost and overall scheme objective. The scheme has no specific target relating to portfolio turnover.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Nifty Corporate Bond Index A-II is the benchmark.

The Benchmark has been chosen on the basis of the investment pattern/objective of the scheme and the composition and weighted average maturity of the index.

UTI AMC reserves the right to change the benchmark in future if a benchmark better suited to the investment objective of the scheme is available.

The performance will be benchmarked to the Total Returns Variant of the Index.

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

- (a) The Net Asset Value (NAV) of the Scheme shall be calculated by determining the value of the scheme's assets and subtracting there from the liabilities of the scheme taking into consideration the accruals and provisions.
- (b) The NAV per unit shall be calculated by dividing the NAV of the scheme by the total number of units issued and outstanding on the valuation day. The NAV will be rounded off to 4 decimals and Units will be allotted upto three decimal places as follows or such other formula as may be prescribed by SEBI from time to time. NAV shall be declared separately for both the Plans.

NAV of the Units under the scheme shall be calculated as shown below:-

$$\text{NAV} = \frac{\text{Market or Fair Value of scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under scheme on the Valuation Date}}$$

Methodology for Calculation of Sale and Re-purchase price of the units of mutual fund scheme

i) In case of Purchase of mutual fund units

As per existing regulation, no entry load is charged with respect to applications for purchase / additional purchase of mutual fund units. Therefore, Computation of Sale Price is as below:

NAV	10.00
Entry Load	Not Applicable
Sale Price	10.00

This also means, Sale Price = NAV as on date of investment

ii) Redemption / Repurchase of mutual fund units

In case of redemption, repurchase price is calculated as below

Repurchase Price = NAV as on date of redemption - exit load (if applicable)

iii) Illustration showing how repurchase price is calculated under 2 different scenarios-

Amount Invested- Rs.10,000/-

Date of Investment - 1st April 2022

NAV as on date of investment - Rs.10/- per unit

Exit load- For exit on or before 12 months from the date of allotment- 1%

For exit after 12 months from the date of allotment- Nil

No of units allotted at the time of purchase

$$= \frac{\text{Amount invested}}{\text{NAV of the scheme on the date of investment}}$$

$$= 10,000 / 10 = 1000 \text{ units}$$

Particulars	Scenario I	Scenario II
	Redemption during applicability of exit load	Redemption in case of Nil Exit load
Date of Redemption	On or before 31st March 2023	After 31st March 2023
NAV as on date of redemption	Rs.12	Rs.12
Applicable Exit load	1%	Nil
Repurchase Price (NAV as on date of redemption-Exit load)	Rs.12 - (1-1%)	Rs.12- (Nil)
Repurchase Price on date of Redemption	Rs.11.88	Rs.12
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.11.88 x 1000	Rs.12 x 1000
	= Rs.11,880/-	Rs.12,000/-

Note - This is only for illustration purpose. Actual Exit load charged in the Scheme may vary.

The above mentioned example does not take into consideration any applicable statutory levies and taxes.

- (c) A valuation day is a day other than (i) Saturday and Sunday (ii) a day on which both the stock exchanges (BSE and NSE) and the banks in Mumbai are closed (iii) A day on which the purchase and redemption of units is suspended. If any business day in UTI AMC, Mumbai is not a valuation day as defined above then the NAV will be calculated on the next valuation day and the same will be applicable for the previous business day's transactions including all intervening holidays.
- (d) The Mutual Fund shall declare the Net asset value separately for both the Plans by 11 p.m. on every business day on the website of UTI Mutual Fund, www.utimf.com. and on AMFI's web-site www.amfiindia.com. The Mutual Fund shall prominently disclose the NAVs of the scheme under a separate head on the website and on the website of Association of Mutual Funds in India (AMFI). Further, the Mutual Fund will extend facility of sending latest available NAVs to unit holders through SMS, upon receiving a specific request in this regard.

'In case NAV of Corporate Debt Market Development Fund ('CDMDF') units is not available by 9:30 p.m. of same Business Day, NAV declaration timing for Mutual Fund Schemes holding units of CDMDF shall be 10 a.m. on next business day instead of 11 p.m. on same Business Day.'

Transaction cost (sub-regulation 10 of Regulation 66) - incurred for the purpose of execution of a trade shall mean regulatory levies and any other expenses charged by the stock exchanges, clearing corporation, and clearing house, as applicable. Such transaction costs shall not form part of the base expense ratio.

Any expense other than those specified in sub-regulation (4), sub-regulation (5), sub regulation (6), sub-regulation (9) and sub-regulation (10), as mentioned above, shall not be charged to the scheme and shall be borne by the AMC or trustee or sponsors.

No charges other than the base expense ratio, brokerage cost, transaction cost, statutory levy and exit load including levies as may be specified by SEBI, shall be charged to the investors.

Any expenditure in excess of the base limits specified in the MF Regulations shall be borne by the AMC or the trustees or sponsors. If any expense of the scheme is borne by the AMC or by the trustees or sponsors, the same shall be done only after the investment and advisory fees charged to the scheme, if any, is fully reversed.

Following AUM slab wise Base Expense Ratio Limits for scheme shall be as per the limits prescribed under the MF Regulations:

- The illustration is to simply describe the impact of expenses charged to the Scheme on schemes returns and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- The above calculations are based on assumed NAVs, and actual returns on investment would be different.

(v) Change in expense ratio

AMCs shall prominently disclose on a daily basis, the TER (scheme-wise, date-wise) of all schemes under a separate head – “Total Expense Ratio of Mutual Fund Schemes” on their website and on the website of AMFI in a downloadable spreadsheet format.

Any change in the base TER (i.e. TER excluding additional expenses provided in Regulation 66 (7) (c) SEBI (Mutual Funds) Regulations, 2026 and Goods and Services Tax on investment and advisory fees) in comparison to previous base TER charged to any scheme/plan shall be communicated to investors of the scheme/plan through notice via email or SMS at least three working days prior to effecting such change.

Provided that any increase or decrease in TER in a mutual fund scheme due to change in AUM and any decrease in TER in a mutual fund scheme due to various other regulatory requirements would not require issuance of any prior notice to the investors.

The above change in the base TER in comparison to previous base TER charged to the scheme shall be intimated to the Board of Directors of AMC along with the rationale recorded in writing.

The changes in TER shall also be placed before the Trustees on quarterly basis along with rationale for such changes.

C. LOAD STRUCTURE– for all classes of investors

- (1) Exit Load is an amount which is paid by the investor to redeem the units from the Scheme. This amount is used by the AMC to pay commissions to the distributor and to take care of other marketing and selling expenses. Load amounts are variable and are subject to change from time to time. For the current applicable structure, please refer to the website of the AMC www.utimf.com or call at 1800 266 1230 (toll free number) or (022) 6227 8000 (non toll free number) or your distributor.

Entry and Exit Load

Entry Load (As % of NAV): Nil (Not Applicable as per SEBI guidelines)

Exit Load (As % of NAV): Nil

The above load shall be applicable for all redemptions / switch out transactions including Systematic Withdrawal Plan (SWP) and Systematic Transfer Plan (STP) under Regular Plan and Direct Plan.

The AMC reserves the right to change/modify exit/switchover load, depending upon the circumstances prevailing at any given time. A load structure when introduced by the AMC may comprise of exit load and/or switchover load as may be permissible under the SEBI Regulations. The load may also be changed from time to time and in the case of an exit/redemption load this may be linked to the period of holding. The switchover load may be different for different plans. However, any such change in the load structure shall be applicable on prospective investment only.

The investor is requested to check the prevailing load structure of the Scheme before investing.

For any change in load structure, AMC will issue an addendum and display it on the website/UTI Financial Centres

- (2) Any imposition or enhancement of exit load shall be applicable on prospective investments only. The AMC shall not charge any load on issue of and units allotted on reinvestment of IDCW for existing as well as prospective investors.

At the time of changing the load structure, the Mutual Fund shall consider the following measures to avoid complaints from investors about investment in the Scheme without knowing the exit load:

- (i) The addendum detailing the changes shall be attached to the Scheme information documents and key information memoranda. The addendum shall be circulated to all the distributors/brokers so that the same can be attached to all Scheme information documents and key information memoranda already in stock.
- (ii) Arrangements shall be made to display the addendum in the Scheme information document in the form of a notice in all the official points of acceptance and distributors/brokers office.
- (iii) The introduction of the exit load along with the details may be stamped in the acknowledgement slip issued to the investors on submission of the application form and shall also be disclosed in the statement of accounts issued after the introduction of such load.
- (iv) Any other measures which the Mutual Fund may feel necessary.

SECTION II

I. Introduction

A. **Definitions/Interpretation** – <https://www.utimf.com/downloads/data-related-to-sid>

B. **Risk Factors**

Standard Risk Factors

1. Investment in Mutual Fund Scheme units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the Scheme invests fluctuate, the value of your investment in the Scheme may go up or down.
3. Past performance of the Sponsors / AMC / Mutual Fund does not guarantee future performance of the Scheme.
4. UTI Corporate Bond Fund is only the name of the scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.10,000/- made by them towards setting up the Fund.
6. **The present Scheme is not a guaranteed or assured return Scheme.**
7. Statements / Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, IDCW and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various market related factors, trading volumes, settlement periods and transfer procedures.
10. The Scheme is not guaranteeing or assuring any IDCW. The Scheme is also not assuring that it will make periodical IDCW, though it has every intention of doing so. All IDCWs are subject to the availability of distributable surplus of the Scheme.

Scheme Specific Risk Factors

Risk factors associated with investing in Fixed Income Securities

- (a) Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Investments in corporate debt carry a higher level of risk than investments in Government securities. Further even among corporate debt, AAA/P1+ rated instruments are comparatively less risky than AA/P1 rated instruments. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern.
- (b) The Net Asset Value (NAV) of the Scheme will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- (c) Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is

finally sold.

- (d) Investment in Corporate Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. Changes in financial conditions of an issuer, changes in economic and political conditions in general, or changes in economic or and political conditions specific to an issuer, all of which are factors that may have an adverse impact on an issuer's credit quality and security values.
- (e) The AMC may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- (f) As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- (g) Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the Schemes may not obtain any return on its investment.
- (h) Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- (i) While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- (j) Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- (k) As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under 'Right to Limit Redemptions' in Section 'Special Considerations', if any, on the right to freely retain or dispose of units being offered'.
- (l) At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme.
- (m) The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield

instruments.

- (n) **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- (o) **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- (p) Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
- (q) Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

Risk factors associated with investing in Foreign Securities

a. Currency Risk:

Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

b. Interest Rate Risk:

The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stands exposed to their interest rate cycles.

c. Credit Risk:

Investment in Foreign Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

d. Country Risk:

The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

Risk factors associated with investing in Derivatives

- a. The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include the risk of mispricing or

improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

- b. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- c. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- d. **Credit Risk:** The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- e. **Illiquidity risk:** This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

Risk factors associated with instruments having special features

- The scheme shall invest in certain debt instruments with special features which may be subordinated to equity and thereby such instruments may absorb losses before equity capital. The instrument is also convertible to equity upon trigger of a pre-specified event for loss absorption as may be decided by the RBI.
- The debt instruments with special features are considered as Non-Convertible Debentures, may be treated as debt instruments until converted to equity.
- The instruments are subject to features that grants issuer a discretion in terms of writing down the principal/coupon, to skip coupon payments, to make an early recall etc. Thus debt instruments with special features are subject to “Coupon discretion”, “Loss Absorbency”, “Write down on Point of Non-viability trigger (PONV) event” and other events as more particularly described as per the term sheet of the underlying instruments.
- The instrument is also subject to Liquidity Risk pertaining to how saleable a security is in the market. The particular security may not have a market at the time of sale due to uncertain/insufficient liquidity in the secondary market, then the scheme may have to bear an impact depending on its exposure to that particular security.

Risk factors associated with investing in Securitised Debt

Securitization– Features & Investment Strategy

Asset Securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. A typical process of asset securitization involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments (e.g. promissory notes, pass through certificates or other debt instruments) to investors, such instruments evidencing the beneficial ownership of the investors in the Receivables. The financial instruments are rated by an independent credit rating agency. An Investor’s Agent is normally appointed for providing trusteeship services for the transaction.

The Fund will predominantly invest only in those Securitized issuances, which have AAA rating indicating the highest level of safety from credit risk point of view at the time of making an investment.

Generally available Asset Classes for Securitization in India

- Commercial Vehicles
- Auto and Two wheeler pools
- Mortgage pools (residential housing loans)
- Personal Loan, credit card and other retail loans
- Corporate loans/receivables

The fund may invest in various type of Securitized issuances as mentioned above, including but not limited to Asset Backed Securitization, Mortgage Backed Securitization, Personal Loan Backed

Securitization, Collateralized Loan Obligation/ Collateralized Bond Obligation and so on.

Risk Factors specific to investments in Securitized Papers:

Types of Securitized Debt vary and carry different levels and types of risks. Credit Risk on Securitized Bonds depends upon the Originator and varies depending on whether they are issued with Recourse to Originator or otherwise. A structure with Recourse will have a lower Credit Risk than a structure without Recourse. Underlying assets in Securitized Debt may assume different forms and the general types of receivables include Auto Finance, Credit Cards, Home Loans or any such receipts, Credit risks relating to these types of receivables depend upon various factors including macro economic factors of these industries and economies. Specific factors like nature and adequacy of property mortgaged against these borrowings, nature of loan agreement/ mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loans, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower influence the risks relating to the asset borrowings underlying the securitized debt.

Holders of the securitized assets may have low credit risk with diversified retail base on underlying assets especially when securitized assets are created by high credit rated tranches, risk profiles of Planned Amortization Class tranches (PAC), Principal Only Class Tranches (PO) and Interest Only class tranches (IO) will differ depending upon the interest rate movement and speed of prepayment. Various types of major Risks pertaining to Securitized Paper are as below:

Liquidity & Price / Interest risk

Presently, secondary market for securitized papers is not very liquid. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure. The price risk of the instruments will be in line with the maturity/duration of such instruments. Domestic Securitized debt can have different underlying assets and these assets have different risk characteristics. These may be as given in the following example: Security 1-Backed by receivables of personal loans originated by XYZ Bank Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds. Security2 - Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from ABC Bank Limited.

Delinquency and Credit Risk

Securitized transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the Seller or the originator, or the parent or any Associate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the underlying Asset. However, many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Prepayment Risk

Asset Securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. Full prepayment of underlying loan contract may take place during the tenure of the paper. In the event of prepayments, investors may be exposed to changes in tenor and reinvestment risk.

Disclosures regarding investments in Securitized Debt:

a. How the risk profile of securitized debt fits into the risk appetite of the scheme?

Investment in these instruments will help the fund earn higher interest accrual and cash flows at regular intervals which would complement the fund's overall positioning. These returns come with a certain degree of risks namely credit and liquidity. Moreover the medium risk profile of the

securitized debt instruments matches that of the prospective investors of the fund and hence can be considered in the fund universe.

We invest in Securitised issuances with minimum credit rating of A1+ (in Short Term)/AAA to AA (in Long Term) indicating the high level of safety in credit risk at the time of making any investment.

b. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

Track record: We ensure that there is adequate past track record of the Originator before selection of the pool including a detailed look at the number of issuances in past, track record of issuances, experience of issuance team, etc.

Willingness to pay: As the securitized structure has underlying collateral structure, depending on the asset class, historical NPA trend and other pool / loan characteristics, a credit enhancement in the form of cash collateral, such as fixed deposit, bank guarantee etc. is obtained, as a risk mitigation measure.

Ability to pay: This assessment is based on a strategic framework for credit analysis, which entails a financial risk assessment.

c. Risk mitigation strategies for investments with each kind of originator

Careful selection of pool based on criteria such as –

- (i) Minimum seasoning of 3-6 months on overall basis higher for risky asset classes.
- (ii) Very low overdue status and a modest repayment track record.
- (iii) Loan to Value and tenure distribution should be at reasonable levels.
- (iv) Adequate regional diversity.
- (v) **Credit Enhancement** is provided to an SPV to cover the losses associated with the pool of assets. It may be divided into First Loss facility and Second Loss facility.
 - **First loss facility** represents the first level of financial support to a SPV as part of the process in bringing the securities issued by the SPV to investment grade. The provider of the facility bears the bulk (or all) of the risks associated with the assets held by the SPV.
 - **Second loss facility** represents a credit enhancement providing a second (or subsequent) tier of protection to an SPV against potential losses.
- (vi) **Liquidity Facility** is provided to assure investors of timely payments. These include smoothening of timing differences between payment of interest and principal on pool of assets and payments due to investors.
- (vii) **Collateral risk analysis:** Projecting the likely performance of the pool being securitized, based on qualitative and quantitative analysis of various factors past performance of the overall loan portfolio of the Originator, experience of other Originators in the same asset class, lending / collection norms and systems employed by the Originator, the specific composition of the selected pool, outlook on the asset class, as well as the expected overall economic conditions.

d. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Characteristics/Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs
Approximate Average maturity (in Months)	36-120 months	12- 60 months	12-60 months	15-48 months	15-80 weeks	5 months - 3 years	6 months - 5 years

Average single exposure range %	3-4%	3-4%	2-3%	2-3%	2-3%	2-3%	3-4%

e. Minimum retention period of the debt by originator prior to securitization

Minimum retention period for the ABS/MBS pool would be 3-6 months depending on the asset type as mentioned in the above table.

f. Minimum retention percentage by originator of debts to be securitized

Minimum retention percentage by originator would vary from originator to originator and by asset class by asset class and would also depend on the timing of origination. However we would require originators minimum skin in the game of 5%.

g. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments in these papers would be only post independent credit opinions from credit analysts towards such ABS/MBS exposure which would aid in mitigation conflict of interests.

h. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

Every ABS/MBS exposure would be tracked by credit analysts with relevant research expertise. Monitoring investment in these securitized debts would be through monthly surveillance of the ABS/MBS pool performance and periodic interaction with rating agencies regarding the trends in collection efficiencies and prepayment rates.

Risk factors associated with Securities Lending

It is one of the means of earning additional income for the scheme with a lesser degree of risk. Securities lending is lending of Securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent Securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the Securities borrowed. As per provision no. 12.11.1 of para 12.11 under Chapter 12 of SEBI Master Circular for Mutual Funds “The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs).”

The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme’s risk may increase or decrease depending upon its investment pattern for e.g. Corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

Risk factors associated with investments in REITs and InvITs –

VOLATILITY OF DISTRIBUTIONS

The REITs & InvITs distributions will be based on the Net Distributable Cash Flows available for distribution, and not on whether the REITs & InvITs makes an accounting profit or loss. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/INVIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things

- Economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
- Force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- Debt service requirements and other liabilities of the portfolio assets
- Fluctuations in the working capital needs of the portfolio assets
- Ability of portfolio assets to borrow funds and access capital markets
- Changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
- Amount and timing of capital expenditures on portfolio assets
- Insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents

OPERATIONAL AND RESIDUAL RISKS

- REIT & InvITs Assets are subject to various risks that we may not be insured against, adequately or at all, including:
 - (i) Changes in governmental and regulatory policies;
 - (ii) Shortages of, or adverse price movement for, materials, equipment and plants;
 - (iii) Design and engineering defects;
 - (iv) Breakdown, failure or substandard performance of the underlying assets and other equipments;
 - (v) Improper installation or operation of the underlying assets and other equipment;
 - (vi) Terrorism and acts of war;
 - (vii) Inclement weather and natural disasters;
 - (viii) Environmental hazards, including earthquakes, flooding, tsunamis and landslide
- Any additional debt financing or issuance of additional Units may have a material, adverse effect on the REITs & InvITs distributions.
- Any future issuance of Units by REITs & InvITs or sales of Units by the Sponsor or any of other significant Unitholders may materially and adversely affect the trading price of the Units.
- The Valuation Report, and any underlying reports, and the valuation contained therein may not be indicative of the true value of the Project SPVs' assets.
- Risk related to business or industry sector.
- There can be no assurance that REITs & InvITs will be able to successfully undertake future acquisitions.

Market Risk:

REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures.

Liquidity Risk:

As the liquidity of the investments made by the scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

Reinvestment Risk:

Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

Price-Risk or Interest-Rate Risk:

REITs & InvITs run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk:

In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.

Participation in Repo in Corporate Debt Securities

In accordance with Para 13.8 of SEBI Master Circular on Mutual Funds read along with SEBI Circular no. SEBI/HO/IMD/POD-2/CIR/P /2023/0085 dated June 8, 2023 and SEBI Circular no. SEBI/HO/ IMD/IMD PoD-2/P/CIR/2023/87 dated June 13, 2023 on ‘Participation of mutual funds in repo in corporate debt securities’, the Scheme may participate in repo transactions in Corporate Debt Securities, within the following overall framework, as per the guidelines of Securities and Exchange Board of India and Boards of UTI Trustee Company Private Limited & UTI Asset Management Company Limited:

(A) Eligibility

The scheme can participate in repos on following corporate debt securities:

- Listed AA and above rated corporate debt securities
- Commercial Papers (CPs) and Certificate of Deposits (CDs)

For the purpose of consideration of credit rating of exposure on repo transactions for various purposes including for Potential Risk Class (PRC) matrix, liquidity ratios, Risk-o-meter etc., the same shall be as that of the underlying securities, i.e., on a look through basis.

(B) Gross Exposure Norms

- (i) The gross exposure of any scheme to ‘corporate bonds repo transactions’ shall not be more than 10% of the net assets of the concerned scheme.
- (ii) The cumulative gross exposure through ‘corporate bonds repo transactions’ along with equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs) and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- (iii) For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits.

(C) Category of the counter-party to be considered for making investment

All entities eligible for transaction in corporate debt repos, as defined by Reserve Bank of India (RBI) and SEBI, shall be considered for repo transactions.

(D) Credit Rating of Counterparty to be considered for making investment

The scheme shall carry out repo transactions with only those counterparties, who have a credit rating of ‘AA- and above’ (Long term rating) or ‘A1+’ (Short term rating).

(E) Tenor of Repo

As a repo seller, the scheme can borrow for a period not more than six months as per the existing Regulation 42 (1) of the SEBI (Mutual Funds) Regulations, 2026.

As a repo buyer, the scheme can lend for a maximum period of one year, subject to provision/s of the Scheme Information Document (SID).

(F) Tenor and Credit Rating of the Collateral

The scheme shall participate in repo transactions in Corporate Bonds rated 'AA' and above ('A1+' in respect of money market instruments).

The tenor of the collateral shall not be more than 10 years.

(G) Minimum Haircut

In terms of RBI guidelines, repo transactions shall be subject to the following minimum haircuts:-

Rating of the Security AAA AA+ AA

Minimum Haircut 7.50% 8.50% 10%

The above are minimum stipulated haircuts where the repo period is overnight or where the re-margining frequency (in case of longer tenor repos) is daily. In all other cases, Fund Manager may adopt appropriate higher haircuts.

Depending on the market conditions and risk perceptions, the Fund Manager may seek higher haircut (while lending) or give a higher haircut (while borrowing).

(H) Risk factors and mitigation measures

(i) Illiquidity Risk

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties.

Therefore, to mitigate such risks, it has been stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

(ii) Counter-party Risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the scheme shall carry out repo transactions with only those counterparties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counterparty. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers.

Similarly, in the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

(iii) Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security ('AA' for long-term instruments / A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

Participation in Derivative Products

The Scheme may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme. The Scheme will comply with the prescribed disclosure requirements. Derivative Positions may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

Derivatives:

A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, index, interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Derivatives are further classified into

- Futures
- Options
- Interest Rate Swaps
- Forward Rate Agreements

Futures:

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Options:

An option is a derivative instrument which gives its holder (buyer) the right but not the obligation to buy or sell the underlying security at the contracted price on or before the specified date. The purchase of an option requires an up-front payment (premium) to the seller of the option.

There are two basic types of options, call option and put option.

(a) Call option:

A call option gives the buyer of the option the right but not the obligation to buy a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

(b) Put option:

A put option gives the buyer of the option the right but not the obligation to sell a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

On expiry of a call option, if the market price of the underlying asset is lower than the strike price the call would expire unexercised. Likewise, if, on the expiry of a put option, the market price of the underlying asset is higher than that of the strike price the put option will expire unexercised.

The buyer/holder of an option can make loss of not more than the option premium paid to the seller/writer but the possible gain is unlimited. On the other hand, the option seller/writer's maximum gain is limited to the option premium charged by him from the buyer/holder but can make unlimited loss.

Interest Rate Swaps:

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cash flows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cash flows need not occur on the same date. It may be noted that in such hedged positions (fixed v/s floating or vice versa), both legs of the transactions have interest rate volatility as underlying. Debt derivatives are as of now customised over the counter products and there is no guarantee that these products will be available on tap. The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme's to undertake trading on a day to day basis.

Forward Rate Agreement (FRA):

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

Investment in units of INVITs

Investment limits applicable for investment in units of InvIT-

- (a) At Mutual fund level - All schemes of mutual fund shall not own more than 10% of units issued by a single issuer of InvIT; and
- (b) At individual scheme level - A mutual fund scheme shall not invest –
 - i. more than 10% of its NAV in the units of InvIT; and
 - ii. more than 5% of its NAV in the units of InvIT issued by a single issuer.

Depending on the development of the market, the internal investment norms would be submitted to the Board of AMC for approval subsequently before making any investment in units of InvIT.

Participation in Interest Rate Futures (IRFs)

a) Investment Norms:

To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR value})$$

At no point of time, the net modified duration of part of the portfolio being hedged should be negative.

In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging. Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject certain conditions such as exposure to IRFs is created only for hedging the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

b) Risks associated with imperfect hedging:

With imperfect hedging, there is a risk that offsetting investments in a hedging strategy will not experience price changes in entirely same direction from each other. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.

For example, in the attempt to hedge interest rate risk of a scheme (diversified portfolio of various debt securities) with a modified duration of say 6 years, the fund manager takes a short position in 10 yr IRF having a modified duration of 6 years. The risk is that price changes in IRF and the scheme portfolio may not move in the same direction or in the same proportion.

Numerical Example:

To understand risk associated with imperfect hedging let us look at the following illustration:

On Nov 1, 2021 the fund buys Rs.100 Crs of 10 year Power Finance Co. (corporate bond) with a modified duration of 6 years from the spot market at a yield of 7.50% (Price: Rs.100). Subsequently, it is anticipated that the interest rate will rise in the near future. Therefore, to hedge the exposure in underlying corporate bond, the fund sells Nov 2021, 10 year benchmark Interest Rate Futures at yield of 7.00% (Price: Rs.98.50) having a modified duration of 6 years.

Let us assume the following two scenarios:

(i) Both the securities experience price changes in the same direction:

On Nov 15, 2021 the corporate bond and government bond yields move up by 10 basis points (0.10%) on back of deteriorating macro-economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest Rate * Modified Duration
 Loss in Corporate Bond Holding = Rs.100 Crs * 0.10% * 6 = (Rs.60 Lacs)
 Similarly, Profit on short selling of Interest Rate Futures = Rs.100 Crs * 0.10% * 6 = Rs.60 Lacs

This allows the fund manager to hedge the portfolio against interest rate movement using Interest Rate Futures.

(ii) Securities experience price changes in the opposite direction:

On Nov 15, 2021 the corporate bond yield moves up by 10 basis points (0.10%) on back of higher supply of corporate bonds & the government bond yield fell by 5 bps due to improving macro-economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest rate * Modified Duration
 Loss in Corporate Bond Holding = Rs.100 Crs * 0.10% * 6 = (Rs.60 Lacs)
 Similarly, Loss on short selling of Interest Rate Futures = Rs.100 Crs * 0.05% * 6 = (Rs.30 Lacs)

On certain instances like the one illustrated above, it is observed that the co-relation between the corporate bonds and government securities may not be perfect over a short period of time leading to imperfect hedging which may result in higher loss/ gain from the strategy. The likelihood of such instances being prevalent on a sustainable basis is expected to be minimal due to strong correlation between government securities & bond markets over the medium to long term.

Investment by the Scheme in any other Schemes of UTI AMC

Investment by the Scheme in other Mutual Fund schemes will be in accordance with Clause 13.14 of Chapter 13 of the SEBI Master Circular for Mutual Funds as under: A scheme may invest in another scheme under the same asset management company or any other mutual fund without charging any fees, provided that aggregate inter scheme investment made by all schemes under the same management or in schemes under the management of any other asset management company shall not exceed 5% of the net asset value of the mutual fund. Such investment will be consistent with the investment objective of the schemes. No investment management fees will be charged by the AMC on such investment.

Investment in CDMDF-

In accordance with the requirement of regulation 40 of SEBI (Mutual Funds) Regulations, 2026 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes and AMCs in units of Corporate Debt Market Development Fund, scheme shall invest 25 bps of its AUM. Subsequent to initial contribution, an incremental contribution to CDMDF shall be made every six months (i.e. at the end of half year ended June and December) at the prevalent NAV of the respective Class Units to ensure that in case the AUM of the Scheme further increases, 25 bps of scheme's AUM ((i.e. as on half year ended June and December)) is invested in units of CDMDF.

CDMDF Framework-

CDMDF shall comply with the Guarantee Scheme for Corporate Debt (GSCD) as notified by Ministry of Finance vide notification no. G.S.R. 559(E) dated July 26, 2023 and SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/128 dated July 27, 2023 and circulars / guidelines/ Letters issued by SEBI and AMFI from time to time, which includes the framework for corporate debt market development fund. The framework will inclusive of following points-

- a) The CDMDF shall deal only in following securities during normal times:
 - Low duration Government Securities
 - Treasury bills
 - Tri-party Repo on G-sec
 - Guaranteed corporate bond repo with maturity not exceeding 7 days
- b) The fees and expenses of CDMDF shall be as follows:
 - During Normal times: (0.15% + tax) of the Portfolio Value charged on daily pro-rata basis.
 - During Market stress: (0.20% + tax) of the Portfolio Value charged on daily pro-rata basis.

- “Portfolio Value” means the aggregate amount of portfolio of investments including cash balance without netting off of leverage undertaken by the CDMDF.
- c) Corporate debt securities to be bought by CDMDF during market dislocation include listed money market instruments. The long term rating of issuers shall be considered for the money market instruments. However, if there is no long term rating available for the same issuer, then based on credit rating mapping of CRAs between short term and long term ratings, the most conservative long term rating shall be taken for a given short term rating.
- d) CDMDF shall follow the Fair Pricing document, while purchase of corporate debt securities during market dislocation as specified in SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/128 dated July 27, 2023 and circulars / guidelines/ Letters issued by SEBI and AMFI from time to time
- e) CDMDF shall follow the loss waterfall accounting and guidelines w.r.t. purchase allocation and trade settlement of corporate debt securities bought by CDMDF, specified in SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/128 dated July 27, 2023 and circulars / guidelines/ Letters issued by SEBI and AMFI from time to time.

Risk factors associated with Creation of Segregated Portfolio –

1. Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund (‘AIF’) in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 (“AIF Regulations”). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 40 of SEBI (Mutual Funds) Regulations, 2026 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund (‘CDMDF’). An incremental contribution to CDMDF shall be made every six months (i.e. at the end of half year ended June and December) at the prevalent NAV of the respective Class Units to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

Risk Management framework to mitigate liquidity risk is summarised as below:

Diversified portfolio – The portfolio held is well diversified in terms of issuer, group and sector, in line with regulatory guidelines and internal Risk Metrics.

Potential Risk Class – Defines to maximum potential risk a fund may take based on the credit rating and

duration of the debt securities

Liquid assets – Based on the profile of the investors and concentration of distributors, the following type of liquid assets are maintained to address potential Liquidity requirement over a 30-day period.

(a) Liquid assets to address 95 percentile Redemption at Risk (maintained in the form of Cash, Government Securities, T-bills and Repo on Government Securities)

(b) Liquid assets to address 95 percentile Conditional Redemption at Risk (maintained in the form of above assets and highest rated debt securities)

Asset Liability Management – ALM to address potential Liquidity requirement over a 90-day period, based on the putative liabilities vis-à-vis secondary market liquidity of the portfolio.

Borrowing – A fund may borrow up to 20% of AUM (or such higher limits as may be allowed by the regulator from time to time) to meet redemption requirements.

Stress testing – Stress Testing is an exercise to simulate adverse scenario on our portfolio based on the past events, and assess the impact such event on the portfolio. This helps in raising timely alerts to take necessary action to address the situation.

Swing Pricing – The swing pricing framework ensures that the impact cost of high redemption is passed on the investors exiting the scheme, while incoming investors in such time benefit due to lower NAV.

SPECIAL CONSIDERATIONS

- **Right to limit Purchase of units and/or Right to limit Redemption of units**

The AMC may, in the general interest of the Unit holders of the Scheme under this Scheme Information Document and keeping in view the unforeseen circumstances / unusual market conditions, limit the total number of Units which may be redeemed on any Business Day to 5% of the total number of Units then issued and outstanding under any Scheme / Plan or such other percentage as the AMC may determine.

The AMC may, at its sole discretion in response to unforeseen circumstances or unusual market conditions including, but not limited to, extreme volatility of the stock, fixed income and money markets, extended suspension of trading on the stock exchanges, natural calamities, communication breakdowns, internal system breakdowns, strikes, bandhs, riots or other situations where the AMC, considers that such suspension is necessary, limit the total number of Units which may be redeemed on any Business Day to 5% of the total number of Units then in issue or such higher percentage as the AMC may determine in any particular case.

Any Units, which by virtue of these limitations are not redeemed on a particular Business Day, will be carried forward for redemption to the next Business Day, in the order of receipt. Redemptions so carried forward will be priced on the basis of the Redemption Price of the Business Day on which redemption is made. Under such circumstances, to the extent multiple redemption requests are received at the same time on a single Business Day, redemption's will be made on pro-rata basis, based on the size of each redemption request, the balance amount being carried forward for redemption to the next Business Day(s).

- **Suspension of Purchase and Redemption of Units**

The purchase and/or redemption of Units may be suspended with prior approval of Trustees and Asset Management Company giving the details of circumstances and justification for the proposed action shall also be informed to SEBI in advance, temporarily or indefinitely when any of the following conditions exist at one/more Designated Investor Service Centre's:

- The stock market stops functioning or trading is restricted;
- Periods of extreme volatility in the stock market, fixed income or money market, which, in the opinion of the Investment Manager, are prejudicial or detrimental to the interest of the investors;
- Natural calamity;
- For any bulk processing like IDCW, etc.
- If banks do not carry-out any of the normal Banking activities at one or more Designated Investor

Service Centers;

- f) In the event of breakdown in the means of communication used for the valuation of investments of the Scheme, without which the value of the securities cannot be accurately calculated;
- g) In the event of any force majeure or disaster that affects the normal functioning of the AMC or the designated investor service centers;
- h) SEBI, by order, so directs;
- i) AMC also reserves the right at its sole discretion to withdraw sale of Units in the Scheme temporarily or indefinitely, if the AMC views that increasing the Scheme's size further may prove detrimental to the existing Unit holders of the Scheme. An order/request to purchase Units is not binding on and may be rejected by the Trustee, the AMC or their respective agents, unless it has been confirmed in writing by the AMC or its agents and (or) payment has been received.

REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme / Plans shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme / Plans. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 36(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions shall be complied within each calendar quarter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK MITIGATION STRATEGIES:

The scheme may use various derivative products as permitted by the Regulations. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Primarily, derivatives including Interest Rate Futures would be used for purpose of hedging and portfolio balancing.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Risk indicators & internal limits are defined and judiciously monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigation measures.

Exposure limits as per provision no. 13.18.1 to 13.18.6 of para 13.18 of Chapter 13 of SEBI Master Circular for Mutual Funds:

- a. The cumulative gross exposure through equity, debt, derivative positions, repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs) and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the Scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- e. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:-
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in

securities and till the existing position remains.

- (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the Scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the Scheme.
- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

h. Risk associated with imperfect hedging:

Basis risk is the risk associated with imperfect hedging. It arises because of the difference between the price of the asset to be hedged and the price of the asset serving as the hedge, or because of a mismatch between the expiration date of the hedge asset and the actual selling date of the asset (calendar basis risk).

Under these conditions, the spot price of the asset, and the futures price, do not converge on the expiration date of the future. The amount by which the two quantities differ measures the value of the basis risk. That is,

Basis = Futures price of contract – Spot price of hedged asset.

For example, in the attempt to hedge against a three-year bond with the purchase of Treasury bill futures, there is a risk the Treasury bill and the bond will not fluctuate identically.

Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- (i) To reduce interest rate risk a scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$

- (ii) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (iii) Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:
 - a) Exposure to IRFs is created only for hedging the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.

- b) Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (excluding the hedged portions, if any) and the IRF is at least 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of Para 13.18.1 of para 13.18 under Chapter 13 of SEBI Master Circular for Mutual Funds. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- i. The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
 - ii. The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.
- c) At no point of time, the net modified duration of part of the portfolio being hedged should be negative.
- (iv) The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of paragraph 13.18.1 of para 13.18 under Chapter 13 of SEBI Master Circular for Mutual Funds. The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

- (v) The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

Use of Interest Rate Futures (IRFs)

As per provision no. 13.15.2 of para 13.15 under chapter 13 of SEBI Master Circular for Mutual Funds on 'Review of norms for participation in derivatives by Mutual Funds', it is proposed to use Interest Rate Futures (IRFs) for imperfect hedging against interest rate volatility by the scheme, subject to applicable investment limits. Some of the key points of circular are as follows:

- (a) To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price / Par Value})$$

- (b) At no point of time, the net modified duration of part of the portfolio being hedged shall be negative.
- (c) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (d) Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to certain conditions such as exposure to IRFs is created only for hedging, the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

Investment in Repo in Corporate Debt Securities

The scheme shall participate in repo transactions in Corporate Debt Securities within the following overall framework, in line with SEBI circular dated November 11, 2011 and policy approved by the Boards of UTI AMC Ltd. & UTI Trustee Co Pvt. Ltd.

Gross Exposure Norms:

(ii) The cumulative gross exposure through ‘corporate bonds repo transactions’ along with debt, derivative positions, repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs) and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.

Debt market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value : Stated value of the paper / Principal Amount
 Coupon : Zero, fixed or floating
 Frequency : Semi-annual, annual, sometimes quarterly
 Maturity : Bullet, staggered
 Redemption : FV, premium or discount
 Options : Call/Put
 Issue Price : Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on Government Securities or treasury bill, etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year

Long Term Debt market in India comprises mainly of two segments *viz.*, the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of ‘Uniform price’ method or ‘Multiple price’ method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

Securitised Debt Instruments – Asset securitization is a process of transfer of risk whereby commercial or consumer receivables are pooled packaged and sold in the form of financial instruments. A typical process of asset securitisation involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments to investors, which are rated by an independent credit rating agency. Bank, Corporates, Housing and Finance companies generally issue securitised instruments. The underlying receivables generally comprise of loans of Commercial Vehicles, Auto and Two wheeler pools, Mortgage pools (residential

housing loans), Personal Loan, credit card and Corporate receivables. The instrument, which is issued, includes loans or receivables maturing only after all receivables are realized. However depending on timing of underlying receivables, the average tenure of the securitized paper gives a better indication of the maturity of the instrument.

(iii) Regulators

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of security issuance and eligible investors:

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, Government Securities (G-Sec) trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in G Sec owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

- (k) **IST (Inter Scheme Transfer)** - Transfer of investments from one Scheme to another Scheme in the same mutual fund, shall be allowed only if:-
 - (i) such transfers are made at the prevailing market price for quoted Securities on spot basis. Explanation: spot basis shall have the same meaning as specified by Stock exchange for spot transactions.

AMCs shall have an appropriate Liquidity Risk Management (LRM) Model at scheme level, approved by trustees, to ensure that reasonable liquidity requirements are adequately provided for. Recourse to ISTs for managing liquidity will only be taken after the following avenues for raising liquidity have been attempted and exhausted:

- I. Use of scheme cash & cash equivalent
- II. Use of market borrowing
- III. Selling of scheme securities in the market
- IV. After attempting all the above, if there is still a scheme level liquidity deficit, then out of the remaining securities, outward ISTs of the optimal mix of low duration paper with highest quality shall be effected.

The use of market borrowing before ISTs will be optional and Fund Manager may at his discretion take decision on borrowing in the best interest of unitholders. The option of market borrowing or selling of security as mentioned at para. (k) II & (k) III above may be used in any combination and not necessarily in the above order. In case option of market borrowing and/or selling of security is not used, the reason for the same shall be recorded with evidence.

- (l) Valuation of money market and debt securities with respect to Inter-scheme transfer in accordance with provision no.10.13.1 to 10.13.5 of para 10.30 under Chapter 10 of SEBI Master Circular for Mutual Funds is as follows:

The scheme would aim to invest in a higher proportion of liquid and traded debt instruments including Government Securities. As the Indian Debt market is characterised by high degree of illiquidity, the proposed aggregate holding of assets considered "illiquid", including debt securities (for which there is no active established market), could be more than 10% of the value of the net assets of the scheme.

In case of the need for exiting from such illiquid debt instruments in a short period of time, the NAV of the scheme could be impacted adversely.

Such investment will be consistent with the investment objective of the Scheme. No investment management fees will be charged by the AMC on such investments.

- (s) The mutual fund shall not borrow except to meet temporary liquidity needs of the mutual funds for the purpose of repurchase, redemption of units or payment of interest or IDCW to the unitholders:

Swing pricing in open ended debt schemes of UTI Mutual Fund	In terms of provision no.4.10.1 of para 4.10 under chapter 4 of SEBI Master Circular for Mutual Funds, swing pricing framework is introduced by SEBI for all open ended debt schemes (except overnight funds, Gilt funds and Gilt with 10-year maturity funds) SEBI has prescribed swing pricing for scenarios related to net outflows from the schemes. Accordingly, a mandatory full swing during market dislocation times for high-risk open ended debt schemes is introduced in scheme provisions. SEBI will determine ‘market dislocation’ either based on AMFI’s recommendation or suo moto. Provisions for Swing Pricing during Market Dislocation a) Swing Pricing: Swing pricing refers to a process for adjusting a scheme’s Net Asset Value (NAV) to effectively pass on transaction costs stemming from significant net capital activity (i.e., flows into or out of the fund) to the investors associated with that activity. Swing pricing is an anti-dilution adjustment that seeks to protect

investors in a scheme from performance dilution as a result of significant outflows from the scheme, particularly during market dislocation. SEBI has prescribed swing pricing for scenarios related to net outflows from the schemes.

- b) **Market Dislocation Period:** Market dislocation would be declared and notified by SEBI. Swing pricing will be applicable for a specified period as notified by SEBI.
- c) **Swing Pricing Framework:** Subsequent to the announcement of market dislocation, the swing pricing framework shall be mandated only in scheme which:
- have High or Very High risk on the risk-o-meter (as of the most recent period at the time of declaration of market dislocation) and
 - classify themselves, on the date of declaration, in the cells A-III, B-II, B-III, C-I, C-II and C-III of Potential Risk Class (PRC) Matrix in terms of SEBI circular dated June 7, 2021.
- d) **Swing Factor:** The minimum swing factor as given below will be applicable. This shall be made applicable to the respective scheme/s and the NAV will be adjusted downward for swing factor.

Minimum swing factor for open ended debt schemes			
Credit Risk of scheme → Interest Rate Risk of scheme ↓	Class A (CRV*≥12)	Class B (CRV>=10)	Class C(CRV<10)
Class I: (MD≤1 year)	NIL	NIL	1.50%
Class II: (MD≤3 years)	NIL	1.25%	1.75%
Class III: Any Macaulay duration	1.00%	1.50%	2.00%
*CRV: Credit Risk Value			

- e) **Applicability of Swing Pricing to Investors:**
- When swing pricing mechanism is triggered and swing factor is made applicable during market dislocation, both the entering and exiting investors shall get NAV adjusted for swing pricing.
 - Swing pricing shall be made applicable to all unitholders at PAN level, with an exemption for redemptions up to Rs.2 lacs for each mutual fund scheme for market dislocation.
- f) **Illustration on the swing pricing effect on the NAV for incoming and outgoing investors.**
Consider a scheme having NAV of Rs.100 and swing factor of 1%, the NAV shall be adjusted as below on issue of notification of market dislocation by SEBI:
Swing NAV = unswung NAV * (1 – swing factor)
= Rs.100 * (1-0.01)
= Rs.100 * (0.99)
= Rs.99
If there is any exit load applicable as per scheme provisions, the same will be applied on swung NAV.
- g) **Computation of NAV for purpose of scheme performance:** The scheme performance shall be computed based on unswung NAV.

Triggering Swing Pricing on Re-opening of a Scheme after announcement of winding up of open ended debt Schemes pursuant to the SEBI letter no. SEBI/HO/IMD-PoD1/OW/P/2024/24219/1 dated July 30, 2024 and AMFI best practice Guidelines no. 96B/ 2024-25 dated November 4, 2024:

There may be instances where an AMC after making an announcement to wind up a scheme, decides to roll-back the decision to wind up the scheme. Such situations may trigger large scale redemptions and hence it would be prudent to invoke the Swing Pricing mechanism to manage such a situation. In other words, if an AMC decides to reverse its

	decision to wind up the scheme, it shall mandatorily invoke the Swing pricing upon re-opening a scheme for subscriptions and redemptions post such announcement. The indicative range of swing pricing shall be as suggested by AMFI for swing pricing during normal times as outlined in the AMFI Best Practice Circular no. 96/ 2021-22 dated March 23, 2022 as given below, and shall be higher of swing period as may be decided by the Board of AMC or for a minimum of 7 working days, upon re-opening a scheme for subscriptions and redemptions. <table><tr><th colspan="4">Indicative Swing factor</th></tr><tr><td>Credit Risk of scheme →</td><td rowspan="2">Class A (CRV*$\geq$12)</td><td rowspan="2">Class B (CRV$\geq$10)</td><td rowspan="2">Class C (CRV$<$10)</td></tr><tr><td>Interest Rate Risk of scheme ↓</td></tr><tr><td>Class I: (MD**$\leq$1 year)</td><td>NIL</td><td>0.05%</td><td>0.20%</td></tr><tr><td>Class II: (MD$\leq$3 years)</td><td>0.05%</td><td>0.10%</td><td>0.40%</td></tr><tr><td>Class III: Any Macaulay duration</td><td>0.10%</td><td>0.20%</td><td>0.60%</td></tr><tr><td colspan="4">*CRV: Credit Risk Value **MD: Macaulay duration</td></tr></table>	Indicative Swing factor				Credit Risk of scheme →	Class A (CRV* $\geq$ 12)	Class B (CRV $\geq$ 10)	Class C (CRV $<$ 10)	Interest Rate Risk of scheme ↓	Class I: (MD** $\leq$ 1 year)	NIL	0.05%	0.20%	Class II: (MD $\leq$ 3 years)	0.05%	0.10%	0.40%	Class III: Any Macaulay duration	0.10%	0.20%	0.60%	*CRV: Credit Risk Value **MD: Macaulay duration

Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)	FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents (“US persons” as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant. FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts. The identification of US person will be based on one or more of following “US indicia”- • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws. FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously. In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date. Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax

	Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI). All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form. The scheme applications, where FACTA/CRS declaration is not provided, shall not be accepted. AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above. Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to SEBI Circular Nos. CIR/MIRSD/2/2015 dated 26th August 2015 & CIR/MIRSD/3/2015 dated 10th September 2015 and guidelines /circulars issued by SEBI from time to time.
