AMFI has published the first tier benchmarks to be used by the AMCs for all open ended debt schemes as per the PRC Matrix. Accordingly, the benchmark is selected from the benchmarks notified by AMFI for the category of scheme in line with the Scheme's PRC level/credit risk level/ Macaulay's duration (as available for the benchmark).

The Trustee may change the benchmark for any of the Schemes in future, if a benchmark better suited to the investment objective of that Scheme is available at such time and as per the guidelines and directives issued by SEBI from time to time.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of a Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

NAV of Units under each Scheme may be calculated by either of the following methods shown below:

$$\text{NAV Per Unit (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

The numerical illustration of the above method is provided below.

Market or Fair Value of Scheme's investments (Rs.) = 11,42,53,650.00

Current Assets (Rs.) = 10,00,000.00

Current Liabilities and Provisions (Rs.) = 5,00,000.00

No. of Units outstanding under the Scheme = 1,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{11,42,53,650.00 + 10,00,000.00 - 5,00,000.00}{1,00,00,000} = 11.4754$$

N.B.: The aforesaid provisions pertaining to "Calculation of NAV" shall apply in respect of each individual Scheme and/or plan as the case may be. The NAV Per Unit above is rounded off to four decimals.

The NAV will be calculated as of the close of every Business Day.

NAVs will be rounded off to four decimal places. The valuation of the Schemes' assets and calculation of the Schemes' NAVs shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

Note: In respect of Schemes having Growth and IDCW Options, there will be more than one NAV, one for each Option, after the declaration of the first IDCW by that Scheme.

While determining the price of the units, the mutual fund shall ensure that the repurchase price of Scheme is not be lower than 97% Net Asset Value as provided under SEBI (MF) Regulations. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

- **Ongoing price for subscription (Purchase Price/switch-in from other schemes/ plans) by investors**

This is the price you need to pay for purchase/switch-in. The Purchase Price of the Units on an ongoing basis will be calculated as described below, which is based on the Applicable NAV

Purchase Price = Applicable NAV

Illustration:

Say, Applicable NAV = Rs. 12/-

Therefore, Purchase Price = Rs.12/-

- **Ongoing price for redemption (sale) /switch outs (to other Schemes/plans of the Mutual Fund)/ intra-Plan switching by investors (Redemption Price)**

This is the price you will receive for redemptions/switch outs. The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any.

In the case of Scheme which currently have no Exit Load, the Redemption Price will be the Applicable NAV. In the case of Scheme having an Exit Load or in which an Exit Load is introduced, the Redemption Price will be calculated as under: $\text{Redemption Price} = \text{Applicable NAV} \times (1 - \text{Exit Load})$

Illustration:

Say, Applicable NAV = Rs. 12.0000 and the Exit Load is 0.50%,
 $\text{Redemption Price} = 12 \times (1 - 0.005) = \text{Rs. } 11.9400$.

B. NEW FUND OFFER (NFO) EXPENSES

These expenses are incurred for the purpose of various activities related to the NFO like sales and distribution fees paid, marketing and advertising, registrar expenses, printing and stationery, bank charges etc. All such expenses are borne by AMC.

C. ANNUAL SCHEME RECURRING EXPENSES

These are the fees and expenses incurred for operating the Scheme. These expenses include and are not limited to Investment Management and Advisory Fee charged by the AMC, Registrar's fee, Marketing and selling costs etc., as given in the **Table 2**, which summarizes estimated annualized recurring expenses as a % of daily net assets of the Scheme.

The AMC has estimated that upto 2.00 % of the daily net assets of the scheme will be charged to the scheme as expenses. For the actual current expenses being charged, the investor should refer to the website of the mutual fund.

Operating & recurring expenses under regulation 52 (6) & 52 (6A):

The Scheme may charge expenses within overall limits as specified in the Regulations except those expenses which are specifically prohibited. The annual total of all charges and expenses of the Scheme shall be subject to the following limits, defined under Regulation 52 of SEBI MF regulations:

Table 1: Limit as prescribed under regulation 52 of SEBI MF regulations for Debt oriented scheme:

- a. Brokerage and transaction costs which are incurred for the purpose of execution of trade up to 0.12 per cent of trade value in case of cash market transactions and 0.05 per cent of trade value in case of derivatives transactions

It is clarified that the brokerage and transaction cost incurred for the purpose of execution of trade over and above the said 0.12 percent and 0.05 percent for cash market transactions and derivatives transactions respectively may be charged to the Scheme within the maximum limit of Total Expense Ratio (TER) as prescribed under regulation 52 of the SEBI (Mutual Funds) Regulations, 1996.

GST on investment and advisory fees:

- a) AMC may charge GST on investment and advisory fees of the Scheme in addition to the maximum limit of TER as per the Regulation 52(6) and (6A).

Provided that the expenses that are very small in value but high in volume (as provided by AMFI in consultation with SEBI) may be paid out of AMC's books. Such expenses can be paid out of AMC's books at actuals or not exceeding 2 bps of the Scheme AUM, whichever is lower.

Further with regards to the cost of borrowings in terms of Regulation 44(2), the same shall be adjusted against the portfolio yield of the Scheme and borrowing costs in excess of portfolio yield, if any, shall be borne by the AMC.

C. Disclosure relating to changes in TER:

In accordance with clause 10.1.8 of the SEBI Master Circular, the AMC shall prominently disclose TER on daily basis on the website www.dspim.com. Further, changes in the base TER (i.e. TER excluding additional expenses provided in Regulation 52(6A)(c) of SEBI (Mutual Funds) Regulations, 1996 and Goods and Services Tax on investment and advisory fees) in comparison to previous base TER charged to any scheme/plan shall be communicated to investors of the scheme/plan through notice via email or SMS at least three working days prior to effecting such change.

The notices of change in base TER shall be updated on the website at least three working days prior to effecting such change. Provided that any decrease in TER in a mutual fund scheme due to various regulatory requirements, would not require issuance of any prior notice to the investors.

A. Illustrative example for estimating expenses for a scheme with corpus of 100 crores:

The AMC in good faith has estimated and summarized in the below table for each Scheme, the expenses on a corpus size of Rs. 100 crores. The actual total expenses may be more or less than as specified in the table below. The below expenses are subject to inter-se change and may increase/decrease as per actuals, and/or any change in the Regulations.

Table 2: The estimated total expenses as a % of daily net assets of the Scheme are as follows:

All fees and expenses charged in a direct plan (in percentage terms) under various heads including the investment and advisory fee shall not exceed the fees and expenses charged under such heads in a Regular Plan.

The above expense structures are indicative in nature. Actual expenses could be lower than mentioned above.

The purpose of the above table is to assist the investor in understanding the various costs & expenses that the investor in the Scheme will bear directly or indirectly.

For the actual current expenses being charged, the investor should refer to the website of the Mutual Fund.

Illustration of impact of expense ratio on scheme's returns:

B. RISK FACTORS

Scheme Specific Risk Factors

Risk Factors associated with investments in Debt Securities and Money Market Securities:

Since the scheme may invest in Debt Securities and Money Market Instruments with maturity up to 1 business day the price risk, credit risk, rating migration risk, liquidity risk, reinvestment risk, pre-payment risk and other risk mentioned below are extremely minimal or negligible when compared to other fixed income mutual fund schemes.

- i. **Price-Risk or Interest-Rate Risk:** Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. However, certain debt securities may be intended to be held till maturity. For such securities held till maturity, there will not be any interest rate risk at the end of the tenure. Duration risk refers to the movement in price of the invested debt instruments due to change in interest rates over different durations of maturity of instruments. Duration of portfolio is expressed in years and should be used as a measure of the sensitivity of the fixed income instrument to a change in interest rates. A longer portfolio duration is associated with greater price fluctuations. A rise in interest rates could normally lead to decrease in prices and generally negatively affects portfolios having longer duration vis-a-vis portfolios having shorter duration. A fall in interest rate generally benefits portfolio having longer duration. A longer duration portfolio is also generally associated with greater volatility vis-a-vis a shorter duration portfolio.
- ii. **Term Structure of Interest Rates (TSIR) Risk:** The Net Asset Value (NAV) of the Scheme(s), to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- iii. **Credit Risk:** Investments in Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness

of the issuer. Different types of securities in which the Scheme would invest as given in the SID carry different levels of credit risk. Accordingly, the Scheme' risk may increase or decrease depending upon their investment patterns. E.g., corporate bonds carry a higher amount of risk than Government securities. Further, even among corporate bonds, bonds which are rated AAA are comparatively less risky than bonds which are AA rated. Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

- iv. **Rating Migration Risk:** Fixed income securities are exposed to rating migration risk, which could impact the price on account of change in the credit rating. For example: One notch downgrade of a AAA rated issuer to AA+ will have an adverse impact on the price of the security and vice-versa for an upgrade of a AA+ issuer.
- v. **Liquidity or Marketability Risk:** This refers to the ease with which a security can be purchased or sold at or near to its valuation Yield-to-Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of investments made in the Scheme may be restricted by trading volumes besides operational issues like settlement periods and transfer procedures. Different segments of the Indian financial markets have different settlement processes & periods and such periods may be extended significantly by unforeseen circumstances. There have been times in the past, when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct further transactions. Delays or other problems in settlement of transactions could result in temporary periods when the assets of the Scheme are not invested and no return is earned thereon. The inability of the Scheme to make intended securities purchases or sale could cause the Scheme to miss certain investment opportunities due to the absence of a well-developed and liquid secondary market for debt securities which would result at times, in potential underperformance in the Scheme.
- vi. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. Investments in fixed income securities may carry reinvestment risk as the cash flows received may get invested at a lower rate of interest prevailing on the date of investment of cash flows viz. interest or redemptions received during the tenure of the scheme.
- vii. **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- viii. **Risk from zero coupon securities:** As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio.
- ix. **Risk associated with floating rate securities:** To the extent the Scheme' investments are in floating rate debt instruments or fixed debt instruments swapped for floating rate return, they will be affected by:
 - a) Interest rate movement (Basis Risk) - Coupon rates on floating rate securities are reset periodically in line with the benchmark index movement. Normally, the interest rate risk inherent in a floating rate instrument is limited compared to a fixed rate instrument. Changes in the prevailing level of interest rates will likely affect the value of the Scheme' holdings until the next reset date and thus the value of the Scheme' Units. The value of securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The Mutual Fund could be exposed to interest rate risk (i) to the extent of time gap in the resetting of the benchmark rates, and (ii) to the extent the benchmark index fails to capture interest rate changes appropriately;
 - b) Spread Movement (Spread Risk) - Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments;

- c) **Settlement Risk (Counterparty Risk)** - Specific floating rate assets may also be created by swapping a fixed return into a floating rate return. In such a swap, there is the risk that the counterparty (who will pay floating rate return and receive fixed rate return) may default;
- d) **Liquidity Risk:** The market for floating rate securities is still in its evolutionary stage and therefore may render the market illiquid from time to time, for such securities that the Scheme are invested in.

Risk factors associated with investment in Tri-Party Repo:

The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/ default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund

Risk associated with investments in repo of corporate debt securities:

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

- i. **Counterparty Risk:** This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price. The Investment Manager will endeavor to manage counterparty risk by dealing only with counterparties having strong credit profiles assessed through in-house credit analysis or with entities regulated by SEBI/RBI/IRDA
- ii. **Collateral Risk:** In the event of default by the repo counterparty, the scheme have recourse to the corporate debt securities. Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions only in AA and above rated money market and corporate debt securities. In addition, appropriate haircuts are applied on the market value of the underlying securities to adjust for the illiquidity and interest rate risk on the underlying instrument.

Risks associated with transacting in scheme units through stock exchange mechanism

In respect of transactions in units of the schemes through NSE and/or BSE or any other recognized stock exchange promoted platforms, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the AMC and Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognized exchange in this regard.

Risk associated with favorable taxation of certain scheme in India:

In any event beyond the control of AMC if the scheme is not able to invest the minimum % of the threshold that it is required to invest in eligible asset classes as per the domestic income tax regulation and rule, the benefit of lower tax, if any, on income distribution or capital gains may not be available to the Unit Holders.

The summary of tax implications given in the taxation section (Units and Offer Section) is based on the existing provisions of the tax laws. The current taxation laws may change due to change in the domestic Tax Act or any subsequent changes / amendments in Finance Act / Rules / Regulations. Such change may entail a higher tax to the scheme or to the investors by way of any tax as made applicable thus adversely impacting the scheme.

The investors are requested to consult their tax counsel for detail understanding of the tax laws and the risk factor associated with such tax laws.

RISK MITIGATION STRATEGIES

Risks associated with Debt Securities and Money Market Securities:

Since the scheme may invest in Debt Securities and Money Market Instruments with maturity up to 1 business day the price risk, credit risk, rating migration risk, liquidity risk, reinvestment risk, pre-payment risk and other risk mentioned below are extremely minimal or negligible when compared to other fixed income mutual fund schemes.

- i. **Market Liquidity Risk:** The liquidity risk will be managed and/or sought to be addressed by creating a portfolio which has adequate access to liquidity. The Investment Manager will select fixed income securities, which have or are expected to have high secondary market liquidity. Market Liquidity Risk will be managed actively within the portfolio liquidity limits by maintaining proper asset-liability match to ensure payout of the obligations.

Amongst all the segments of the fixed income market in India, the government securities market demonstrates the highest market liquidity. The liquidity varies from security to security with benchmark securities for the reference tenors like 10 years, 5 years etc. showing relatively higher market liquidity. With time, the benchmark government security changes and thus hence liquidity propagates from one security to the other.

- ii. **Credit Risk:** Credit Risk associated with fixed income securities (including and not limited to instruments having structured obligations, credit enhancements, special features or are unrated) will be managed by making investments in securities issued by borrowers post detailed credit review internally. The credit research process includes a detailed in-house analysis and due diligence where limits are assigned for each of the issuer (other than government of India) for the amount as well as maximum permissible tenor. The credit process ensures that issuer limits are reviewed periodically by taking into consideration the financial statements and operating strength of the issuer.
- iii. **Rating Migration Risk:** The endeavor is to invest in well researched issuers. The due diligence performed by the fixed income team before assigning credit limits and the periodic credit review and monitoring should help keep the rating migration risk low for company-specific issues.
- iv. **Interest Rate Risk:** The investment managers will endeavor to keep the duration within the permissible limit as defined by the scheme document and based on the investment objectives.
- v. **Re-investment Risk:** The Investment Manager will endeavor that besides the tactical and/or strategic interest rate calls, the portfolio is fully invested.
- vi. **Term Structure of Interest Rates (TSIR) Risk:** The Scheme is expected to have duration based on the investment objective and limits defined in the scheme documents. Depending on the nature of the scheme, the Term Structure of Interest Rates (TSIR) Risk cannot be eliminated and it exists as a primary feature of the scheme.

Risks associated with favorable taxation of certain Scheme:

Investment Manager regular monitor's investment thresholds of Scheme of the Fund house to ensure compliance with the relevant tax laws & regulation.

Risk Management Tools

DSP mutual fund schemes as mandated wide various SEBI & AMFI circulars, have adopted the following for risk management & liquidity management tools

Potential Risk Matrix (PRC) & Risk-o-meter: Investors are requested to review this scheme's Potential Risk Matrix (PRC) to understand the maximum risk that this scheme will run as per design and & Risk-o-meter to understand periodical measurement of that risk on a regular basis. Investor are suggested to read about various disclosures under the section "C.PERIODIC DISCLOSURES" pertaining to "Compliance with Potential Risk Class Matrix norms" & "Risk-o-meter" to understand in detail the disclosure frequency and remedial measures in case of breaches in the boundaries.

II. Information about the scheme:

A. Where will the scheme invest

Detailed description of the instruments (including overview of debt markets in India, if applicable) mentioned in Section I

Government Securities	Securities created and issued by the Central Government and/or a State Government (including Treasury Bills) or Government Securities as defined in the Government Securities Act, 2006, as amended or re-enacted from time to time.
Money Market Instruments	Commercial papers, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, and any other like instruments having maturity upto 1 year
Repos & Reverse Repos	Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds.
TREPS	TREPs is a money market instrument that enables entities to borrow and lend against sovereign collateral security. The maturity ranges from 1 day to 90 days and can also be made available upto 1 year. Central Government securities including T-bills are eligible securities that can be used as collateral for borrowing through TREPs.
Zero Coupon Bonds	A zero-coupon bond is a type of debt security that does not pay periodic interest (coupons). Instead, it is issued at a significant discount to its face value and matures at its full face value. Return from the bond is the difference between the purchase price and the amount received at maturity.
Convertible Securities	Convertible securities are financial instruments, such as bonds or preferred shares that can be converted into a predetermined number of the issuing company's common stock. This conversion can typically be done at the holder's discretion and is often subject to specific terms and conditions. Convertible securities offer the potential for capital appreciation through stock price increases while providing downside protection through fixed interest payments or dividends.

Treasury Bills	Treasury bills (T-bills) are short-term government securities issued at a discount to their face value and mature within one year. They do not pay periodic interest but provide returns by maturing at their full face value, with the difference between the purchase price and the maturity value representing the investor's earnings. T-bills are considered low-risk investments due to government backing.
Debt Obligations of Government of India	Debt obligations of the Government of India include financial instruments like Government Bonds (G-Secs), Treasury Bills (T-Bills), Savings Bonds, and Sovereign Gold Bonds (SGBs). These instruments are issued to finance government expenditures and manage monetary policy, offering varying maturities and interest rates. G-Secs are long-term securities with semi-annual interest payments, while T-Bills are short-term, issued at a discount. These debt obligations are considered low-risk investments due to government backing, providing stable returns and portfolio diversification.
Debt Obligations of State Government of India	Debt obligations of State Governments of India primarily include State Development Loans (SDLs). SDLs are bonds issued by state governments to finance their budgetary needs and developmental projects. These bonds have varying maturities, typically ranging from 1 to 10 years, and offer fixed interest payments. SDLs are considered relatively safe investments, as they are backed by the state governments' revenues and, to some extent, the central government.
Debt Obligations of Local Governments of India	Debt obligations of local governments in India, such as municipal bonds, are financial instruments issued by urban local bodies (ULBs) to fund infrastructure projects and other development activities. These bonds typically offer fixed interest payments and have varying maturities.
Units of Mutual Funds	Units of mutual funds represent an investor's share in a mutual fund scheme. When investors buy mutual fund units, they pool their money with other investors to collectively invest in a diversified portfolio of assets such as stocks, bonds, or other securities. Each unit reflects the proportionate ownership of the fund's assets. The value of these units, known as the Net Asset Value (NAV), fluctuates based on the performance of the underlying assets.
Structured Notes	Structured Notes are hybrid financial instruments that combine traditional debt securities with derivative components to offer customized investment solutions. These notes typically pay a return based on the performance of an underlying asset, index, or benchmark, such as stocks, commodities, interest rates, or currencies. Structured notes are designed to meet specific investment objectives, providing features like principal protection, enhanced yields, or leverage. While they can offer attractive returns and tailored risk exposure, they also carry higher complexity and risk compared to traditional fixed-income securities, making them suitable for more sophisticated investors.
Bills re-discounting	Bills re-discounting is a financial practice where banks purchase bills of exchange from other financial institutions at a discounted rate, providing immediate liquidity to the selling institution. This transaction allows banks to manage their short-term liquidity needs efficiently, as they can convert their assets into cash before their maturity dates.
Commercial Papers	Commercial Papers (CPs) are short-term, unsecured debt instruments issued by corporations, financial institutions, and other large entities to meet their immediate funding needs, such as working capital requirements. Typically issued at a discount to face value and with maturities ranging from a few days to one year, CPs offer investors a relatively safe, liquid investment option with competitive returns compared to other short-term instruments. Due to their short maturity periods, CPs are often used by companies as a cost-effective alternative to bank loans for short-term financing needs.

Commercial Bills	Commercial Bills are short-term, negotiable financial instruments used in trade finance, representing a written order from one party (the drawer) to another (the drawee) to pay a specified amount to the bearer or a named party (the payee) at a future date. They are commonly used by businesses to finance their working capital needs by enabling the seller of goods to receive immediate payment, while the buyer gets a credit period to make the payment. These bills can be discounted with banks or financial institutions before maturity, providing liquidity to the holder. They play a crucial role in facilitating trade transactions and managing short-term funding requirements.
Certificate of deposit	A Certificate of Deposit (CD) is a short- to medium-term, interest-bearing deposit instrument issued by banks and financial institutions to individuals or corporations. CDs have a fixed maturity date, typically ranging from a few months to several years, and offer a fixed interest rate higher than regular savings accounts. They are negotiable and can be traded in the secondary market before maturity. CDs provide a low-risk investment option for investors seeking predictable returns, as they are generally insured and backed by the issuing institution's creditworthiness.

Overview of Debt Market in India

The Indian bond market comprises mainly of Government securities; State Development Loans (SDL), bonds issued by Public Sector Undertakings (PSU), Development Financial Institutions (DFI) and Infrastructure-related agencies; debentures and money market instruments issued by corporate sectors and banks. The Government of India routinely issues Government securities and Treasury bills for liquidity and fiscal management. While the Government issues Treasury bills for 91 days, 182 days and 364 days in a discounted form, coupon-bearing Government securities are issued for maturity ranging from 1 year to as high as 50 years. Both Treasury bills and coupon-bearing securities are auctioned by the RBI on behalf of the Government of India. The Indian bond market has also witnessed issuance of bonds from Government-sponsored institutions, DFIs, and infrastructure-related agencies. These bonds are rated by credit rating agencies like CRISIL, ICRA, CARE and India Ratings. They are widely held by market participants because of their liquidity and reduced risk perception due to the government stake in some of them.

The Indian corporate sector has also been frequently raising capital through issuance of non-convertible debentures and commercial papers. These debentures/commercial Papers are mostly rated by rating agencies like CRISIL, ICRA, CARE and India Ratings. There is an active and vibrant secondary market for these debentures/commercial Papers. These normally trade at a marginally higher yield than bonds issued by PSU and other government-sponsored agencies.

Overview of Money Market in India

Money market instruments includes commercial papers, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, and any other like instruments as specified by the Reserve Bank of India from time to time. Money market assets are liquid and actively traded segment of fixed income markets.

Treasury bills are issued by the Government of India through regular weekly auctions, while Cash Management Bills are issued on an ad-hoc basis. They are mostly subscribed by banks, state governments, mutual funds and other entities. As on 31 Oct 2025, total outstanding treasury bills are Rs. 7,59,815 crore*.

Certificate of Deposits are issued by scheduled banks for their short-term funding needs. They are normally available for up to 365 days tenor. Certificate of deposits issued by public sector banks are normally rated A1+ (highest short-term rating) by various rating agencies. As on 31st October 2025, outstanding Certificate of Deposits are Rs. 5,14,877 crore*. Certificate of deposits currently trade at a spread of around 85 basis points** over comparable treasury bills as on 31st October, for a one-year tenor.

As on 31st October 2025, total outstanding Commercial Papers are Rs. 4,79,630 crore*. Commercial papers trade at around 115 basis points** over comparable treasury bills as on 31st October 2025, for a one-year tenor.

Call Money, TREPS and CROMS are mainly used by the borrowers to borrow a large sum of money on an over-night basis. While Call Money is an unsecured mode of borrowing, TREPS and CROMS are secured borrowing backed by collaterals approved by the Clearing Corporation of India.
