C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme will track underlying Index and will use a “passive” or indexing approach to endeavor to achieve scheme’s investment objective. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment nor will it attempt to apply any economic, financial or market analysis.

Since the scheme is an exchange traded fund, the scheme will only invest in the security constituting the underlying index. However, due to corporate action in companies comprising of the index, the scheme may be allocated/allotted securities which are not part of the index. The scheme may hold upto 5% of their total assets in stocks not included in the corresponding Underlying Index. For example, the AMC may invest in stocks not included in the relevant Underlying Index in order to reflect various corporate actions (such as mergers) and other changes in the relevant Underlying Index (such as reconstitutions, additions, deletions and these holdings will be in anticipation and in the direction of impending changes in the underlying index). These investments which fall outside the underlying index due to corporate action shall be rebalanced not later than seven days from the date of such change.

Exchange Traded Fund (ETF)

ETFs are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. ETFs have the advantage over traditional open-ended index funds in that they can be bought and sold on the exchange at traded prices on an intra-day basis that are expected to trade close to NAV of the Scheme.

ETFs are usually passively managed funds wherein subscription/redemption of units work on the concept of exchange with underlying securities. In other words, Market Makers / Authorised

Participants/Large investors can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange.

ETFs have all the benefits of indexing such as diversification, low cost and transparency.

ETFs are highly flexible and can be used as a tool for gaining instant exposure to the equity markets, equitizing cash or for arbitraging between the cash and futures market.

Benefits of ETFs

- a. Can be easily bought / sold like any other stock on the exchange through Members of the Stock Exchange on which the Units are listed/traded by placing an order over phone/through online access mechanism provided by such Members
- b. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
- c. Minimum investment for an ETF is one unit.
- d. An investor can get a consolidated view of his investments without adding too many different account statements as the units issued would be in demat form. The consolidated account statement (CAS) is sent by depositories containing details relating to financial transactions made by an investor across all mutual funds and transactions in dematerialized securities across demat account.

However, the Risks of ETFs as mentioned in the paragraphs on Risk factors should also be considered while investing in any ETF product

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

BSE Sensex Next 50 TRI is the benchmark.

The Benchmark has been chosen on the basis of the investment pattern/objective of the scheme and the composition of the index.

The performance will be benchmarked to the Total Returns Variant of the Index.

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

- (a) The Net Asset Value (NAV) of the units issued under the scheme shall be calculated by determining the value of the assets of the scheme and subtracting there from the liabilities of the scheme taking into consideration the accruals and provisions.
- (b) The NAV per unit shall be calculated by dividing the NAV of the scheme by the total number of units issued and outstanding on the valuation day. The NAV will be rounded off to 4 decimals and Units will be allotted upto three decimal places as follows or such other formula as may be prescribed by SEBI from time to time.

NAV of the Units under the Scheme shall be calculated as shown below:-

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

Methodology for Calculation of Sale and Re-purchase price of the units of mutual fund scheme

a) In case of Purchase of mutual fund units

As per existing regulation, no entry load is charged with respect to applications for purchase / additional purchase of mutual fund units. Therefore, Computation of Sale Price is as below:

NAV	10.00
Entry Load	Not Applicable
Sale Price	10.00

This also means, Sale Price = NAV as on date of investment

b) Redemption/ Repurchase of mutual fund units

In case of redemption, repurchase price is calculated as below

Repurchase Price = NAV as on date of redemption - exit load (if applicable)

c) Illustration showing how repurchase price is calculated under 2 different scenarios-

Amount Invested- Rs.10,000/-

Date of Investment- 1st April 2022

NAV as on date of investment- Rs.10/- per unit

Exit load- For exit on or before 12 months from the date of allotment- 1%

For exit after 12 months from the date of allotment- Nil

No of units allotted at the time of purchase
 Amount invested

$$= \frac{\text{Amount invested}}{\text{NAV of the scheme on the date of investment}}$$

$$= 10,000 / 10 = 1000 \text{ units}$$

Particulars	Scenario I	Scenario II
	Redemption during applicability of exit load	Redemption in case of Nil Exit load
Date of Redemption	On or before 31st March 2023	After 31st March 2023
NAV as on date of redemption	Rs. 12	Rs.12
Applicable Exit load	1%	Nil
Repurchase Price (NAV as on date of redemption-Exit load)	Rs.12 - (Rs.12*1%)	Rs.12- (Nil)
Repurchase Price on date of Redemption	Rs.11.88	Rs.12
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.11.88 x 1000	Rs.12 x 1000
	= Rs.11,880/-	Rs.12,000/-

Note- This is only for illustration purpose. Actual Exit load charged in the Scheme may vary. The above mentioned example does not take into consideration any applicable statutory levies and taxes.

- (c) A valuation day is a day other than (i) Saturday and Sunday (ii) a day on which both the stock exchanges (BSE and NSE) and the banks in Mumbai are closed (iii) A day on which the purchase and redemption of units is suspended. If any business day in UTI AMC, Mumbai is not a valuation day as defined above then the NAV will be calculated on the next valuation day and the same will be applicable for the previous business day's transactions including all intervening holidays.
- (d) The Mutual Fund shall declare the Net asset value separately for both the Plans by 11 p.m. on every business day on the website of UTI Mutual Fund, www.utimf.com. and on AMFI's website www.amfiindia.com.The Mutual Fund shall prominently disclose the NAVs of the scheme under a separate head on the website and on the website of Association of Mutual Funds in India (AMFI). SECTION II

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION

Definitions / Interpretation is available under the following link on the website of UTI Mutual Fund –

<https://www.utimf.com/downloads/data-related-to-sid>

B. RISK FACTORS

Standard Risk Factors:

1. Investment in Mutual Fund scheme Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme. There can be no assurance or guarantee that the objective of the Scheme will be achieved.
4. The name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns. Investors are therefore urged to study the Scheme Information Document carefully and consult their Financial Advisor before considering an investment in the Scheme.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 10,000/- made by them towards setting up the Fund.
6. The present scheme is not a guaranteed or assured return scheme.
7. Statements/Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, Income Distribution cum Capital Withdrawal (IDCW) and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by change in the general markets conditions, factors and forces affecting capital markets in particular, level of interest rates, various markets related factors and trading volumes.
10. Investment decisions made by the AMC may not always be profitable.
11. From time to time and subject to the Regulations, the Sponsors, the Mutual Funds and investment companies managed by them, their associate companies, subsidiaries of the Sponsors, and the AMC may invest either directly or indirectly in the Scheme. The funds managed by these associates, the Sponsors, subsidiaries of the Sponsors and /or the AMC may acquire a substantial portion of the scheme's units and collectively constitute a major investor in the scheme. Accordingly, redemption of units held by such funds, associates, and Sponsors might have an adverse impact on the units of the scheme because the timing of such redemption may impact the ability of other unitholders to redeem their units.

12. Scheme Specific Risk Factors:

UTI BSE Sensex Next 50 ETF, the scheme, will be a passively managed by providing exposure to BSE Sensex Next 50 Index and tracking its performance and yield, before expenses, as closely as possible. The scheme performance may be affected by a general decline in the Indian markets relating to its underlying Index. The scheme invests in the underlying Index regardless of its investment merit.

Although the units are listed on the Stock Exchange/s, the Trustee/AMC will not be liable for any delay in listing of units of the Scheme on the stock exchange(s)/ or due to connectivity problems with the depositories due to the occurrence of any event beyond their control

The securities in which the Scheme invests may underperform the various general securities, markets or different asset classes. Different type of securities tends to go through cycles of outperformance and under-performance in comparison to the general securities markets.

The scheme may not fully replicate the performance of the underlying index due to temporary unavailability of certain Index Securities in the secondary market or due to other extraordinary circumstances.

Performance of the underlying Index will have a direct bearing on the performance of the Scheme. In the event the underlying Index is dissolved or is withdrawn by Index Service Provider, the Trustee reserves the right to modify the Scheme so as to track a different and suitable index and the procedure stipulated in the regulations shall be complied with.

Tracking error may have an impact on the performance of the scheme. “Tracking Error” means the extent to which the NAV of the fund moves in a manner inconsistent with the movements of the underlying Index on any given day or over any given period of time from any cause or reason whatsoever including but not limited to differences in the weightage of the investments in the securities and the weightage to such securities in the underlying index, time lags in deployment or realization of funds under the Scheme as compared to the movement of or within the said index, expenditure incurred by the scheme, corporate actions such as debenture or warrant conversions, rights, mergers, etc., change in constituents of Index, rounding of quantity of shares underlying the index, IDCW payouts, whole cash not invested at all times as it may keep a portion of funds in cash to meet redemption etc. However UTI AMC will endeavor to keep the tracking error as low as possible.

UTI AMC will endeavor to keep the tracking error within the range of 2% on an annualized basis in the scheme as against the returns of the underlying Index.

The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document & Statement of Additional Information.

Redemption by the unit holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund their directors or their employees shall not be liable for any tax consequences that may arise.

The Scheme would be investing in equities and money market instruments (such as Triparty Repo on Government Securities or treasury bill or as defined by SEBI regulations, term/notice money market, repos, reverse repos and any alternative to the call money market as may be directed by the RBI). The liquidity of the scheme’s investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme’s investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.

The Mutual Fund is not assuring any IDCW nor is it assuring that it will make any IDCWs. All IDCWs are subject to the availability of distributable surplus and would depend on the performance of the scheme.

Portfolio concentration risk

ETF being a passive investment carries lesser risk as compared to active fund management. The portfolio follows the index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to tracking error. Thus there is no additional element of volatility or stock concentration on account of fund manager’s decisions.

13. Risks pertaining to transaction in units through Stock Exchange

- a. Although the Scheme’s Units are listed on stock exchange/s, there can be no assurance that an active secondary market will develop or be maintained. Hence there would be times when trading in the Units of the Scheme would be infrequent/less liquid.
- b. Trading in the Units of the Scheme on stock exchange/s may be halted because of market conditions

or for reasons that in view of stock exchange/s &/or SEBI, trading in the Units of the Scheme are not advisable. In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange/s and SEBI ‘circuit filter’ rules. There can be no assurance that the requirements of stock exchange/s necessary to maintain the listing of the Units of the Scheme will continue to be met or will remain unchanged.

- c. The Scheme may not be able to immediately sell certain types of illiquid Securities. The purchase price and subsequent valuation of restricted and illiquid Securities may reflect a discount, which may be significant, from the market price of comparable Securities for which a liquid market exists.
- d. The Units of the Scheme may trade above or below their NAV. The NAV of the Scheme will fluctuate with changes in the market value of the holdings of the Scheme. The trading prices of the Units of the Scheme will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Scheme. Any changes in the trading regulations by the Stock Exchange/s or SEBI or other applicable regulations may affect the ability of market participants to arbitrage resulting it to wider premium/discount to NAV. However, it is expected that large discounts or premiums to the NAV of Units of the Scheme may not sustain for long due to market participants’ actions on arbitrage opportunity available under such circumstances.
- e. **Impact cost risk:** The scheme may have to bear the impact cost arising from sale and purchase of underlying securities either when it accepts/gives cash or cash equivalents in lieu of one or more Index securities, cash component on issue and repurchase of units or while undertaking rebalancing of the scheme portfolio as a consequence of change in the composition or change in relative weightages of the securities underlying Index.
- f. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the Securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- g. **Risk of Substantial Redemptions:** In the event of receipt of inordinately large number of redemption requests or of a restructuring of the Schemes’ portfolio, there may be delays in the redemption of units. Substantial Redemptions of Units within a limited period of time could require the Scheme to liquidate positions more rapidly than would otherwise be desirable, which could adversely affect the value of both the Units being Redeemed and that of the outstanding Units of the Scheme. The Trustee, in the general interest of the Unit holders of the Scheme offered under this SID and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day depending on the total “Saleable Underlying Stock” available with the Fund.

14. Investments under the scheme may also be subject to the following risks:

I. Investment in Equities:

- a. Equities are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity instruments is due to various micro and macro-economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.
- b. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the scheme portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the scheme portfolio.
- c. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the scheme. Different segments of the financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities.
- d. As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of units may be significant in the event of an inordinately large number of redemption requests or a restructuring of the Scheme. In view of this, the Trustee has the right, in its sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.

II Risk associated with investing in Money Market Instruments/Debt and Derivative securities:

- a. **Money market instruments** are subject to price volatility due to factors such as changes in interest rates general levels of market liquidity, market perception of credit worthiness of the issuer of such instruments and risks associated with settlement of transactions and reinvestment of intermediate cash flows. The NAV of a scheme's Units, to the extent that such Scheme is invested in money market instruments, will consequently be affected by the aforesaid factors.
- b. **Credit Risk:** Bonds /debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit / default risk in view of the sovereign status of the issuer.
- c. **Interest -Rate Risk:** Bonds/ Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI, the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and the increase or decrease in the level of interest rates. The prices of Bonds/ Government securities are also influenced by the liquidity in the financial system and/or the open market operations (OMO) by RBI.
- d. **Migration of rating Risk:** This relates to the risk on account of a fall/rise in price of rated securities on account of change in ratings of such securities.
Pressure on exchange rate of the rupee may also affect security prices. Such rise and fall in price of bonds/government securities in the portfolio of the Scheme may influence the NAVs under the Scheme as and when such changes occur.
- e. **Liquidity Risk:** The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the Scheme might have to incur a significant "impact cost" while transacting large volumes in a particular security.
- f. **Securities Lending:** It is one of the means of earning additional income for the scheme with a lesser degree of risk. Securities lending is lending of Securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent Securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the Securities borrowed. As per provision no. 12.11.1 of para 12.11 under Chapter 12 of SEBI Master Circular for Mutual Funds, Annexure 2 "The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs)."
The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.
- g. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

Money Market Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.

In the normal course of business, the scheme would be able to make payment of redemption proceeds within 3 working days, as it would have sufficient exposure to liquid assets. In case of the need for exiting from such illiquid debt instruments in a short period time, the NAV of the scheme could be impacted adversely.

III Trading in debt and equity derivatives involves certain specific risks like:

- a. **Credit Risk:** This is the risk of default by the counter party. This is usually to the extent of difference between actual position and contracted position. This risk is substantially mitigated where derivative transactions happen through clearing corporation.
- b. **Market Risk:** Market movement may also adversely affect the pricing and settlement of

derivative trades like cash trades.

- c. **Illiquidity Risk:** The risk that a derivative product may not be sold or purchased at a fair price due to lack of liquidity in the market.
- d. An exposure to derivatives can lead to losses. Success of dealing in derivatives depends on the ability of the Fund Manager to correctly assess the future market movement and in the event of incorrect assessment, if any, performance of the scheme could be lower.
- e. Interest Rate Swaps (IRSs) and Forward Rate Agreements (FRAs) do also have inherent credit and settlement risks. However, these risks are substantially less as they are limited to the interest stream and not the notional principal amount.
- f. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Notwithstanding such derivatives being used for limited purpose of hedging and portfolio balancing, the overall market in these segments could be highly speculative due to action of other participants in the market.
- g. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- h. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

IV. Market Trading Risks:

There can be no assurance that the requirements of stock exchange necessary to maintain the listing of the units of the scheme will continue to be met or will remain unchanged.

As the scheme proposes to invest not less than 95% of the net assets in securities comprising of underlying index, any deletion of stocks from or addition to in the index may require sudden and immediate liquidation or acquisition of such stocks at the prevailing market prices irrespective of whether valuation of stocks is attractive enough. This may not always be in the interest of unitholders.

Asset Class Risk: The returns from the types of securities in which the scheme invest may underperform returns of general securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under-performance in comparison of securities markets.

Participating in Derivative Products: Derivatives:

A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, index, interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Derivatives are further classified into:-

Futures
Options
Swaps

Futures: A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Options:

An option is a derivative instrument, which gives its holder (buyer) the right but not the obligation to buy or sell the underlying security at the contracted price on or before the specified date. The purchase of an option requires an up-front payment (premium) to the seller of the option.

There are two basic types of options, call option and put option.

- (a) **Call option:** A call option gives the buyer of the option the right but not the obligation to buy a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.
- (b) **Put option:** A put option gives the buyer of the option the right but not the obligation to sell a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

date.

On expiry of a call option, if the market price of the underlying asset is lower than the strike price the call would expire unexercised. Likewise, if, on the expiry of a put option, the market price of the underlying asset is higher than that of the strike price the put option will expire unexercised.

The buyer/holder of an option can make loss of not more than the option premium paid to the seller/writer but the possible gain is unlimited. On the other hand, the option seller/writer's maximum gain is limited to the option premium charged by him from the buyer/holder but can make unlimited loss.

Swaps:

The exchange of a sequence of cash flows that derive from two different financial instruments. For example, the party receiving fixed in an ordinary Interest Rate Swap receives the excess of the fixed coupon payment over the floating rate payment. Of course, each payment depends on the rate, the relevant day count convention, the length of the accrual period, and the notional amount.

Debt derivatives are as of now customized over the counter products and there is no guarantee that these products will be available on tap. There are various possible combinations of strategies, which may be adopted, in a specific situation. The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day to day basis.

Some of the derivative techniques/ strategies that may be used are:-

- (i) The Scheme will use hedging techniques including dealing in derivative products – like futures and options, warrants, interest rate swaps (IRS), forward rate agreement (FRA) as may be permissible under SEBI (MF) Regulations.
- (ii) The scheme may take derivatives position based on the opportunities available and in line with the overall investment objective of the Scheme. These may be taken to hedge the portfolio and rebalance the same.
- (iii) The Fund manager may use various strategies for trading in derivatives with a view to enhancing returns and taking cover against possible fluctuations in the market.
- (iv) The Fund Manager may sell the index forward by taking a short position in index futures to save on the cost of outflow of funds or in the event of negative view on the market.

REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The requirement of minimum number of investors in the scheme is not applicable to the scheme in terms of provision no. 6.11.4.2 of para 6.11.4 under Chapter 6 of SEBI Master Circular for Mutual Funds.

C. RISK MITIGATION STRATEGIES:

The scheme may use various derivative products as permitted by the Regulations. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Primarily, derivatives including Interest Rate Futures would be used for purpose of hedging and portfolio balancing.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Risk indicators & internal limits are defined and judiciously monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigation measures.

Exposure limits as per provision no. 12.24.1 and 12.25.1 to 12.25.7 of para 12.24 and 12.25 under Chapter 12 of SEBI Master Circular for Mutual Funds:

- a. The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- e. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:-
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter

party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss.

Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- (i) To reduce interest rate risk a scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

(Portfolio Modified Duration * Market Value of the Portfolio)

(Futures Modified Duration * Futures Price / PAR)

- (ii) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

- (iii) Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:

- Exposure to IRFs is created **only for hedging** the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (*excluding the hedged portions, if any*) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of paragraph 12.25.9.3 (i) & (ii) of para 12.25.9 under Chapter 12 of SEBI Master Circular for Mutual Funds. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
 - The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.
- At no point of time, the net modified duration of part of the portfolio being hedged should be negative.
 - The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of paragraph 12.25.9.3 (iv) of para 12.25.9 under Chapter 12 of SEBI Master Circular for Mutual Funds.
 - Risk involved in imperfect hedging using Interest Rate Futures (IRFs)**
With imperfect hedging, there is a risk that offsetting investments in a hedging strategy will not experience price changes in entirely same direction from each other. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.

For example, in the attempt to hedge interest rate risk of a scheme (diversified portfolio of various debt securities) with a modified duration of say 6 years, the fund manager takes a short position in

10 year IRF having a modified duration of 6 years. The risk is that price changes in IRF and the scheme portfolio may not move in the same direction or in the same proportion.

Numerical Example:

To understand risk associated with imperfect hedging let us look at the following illustration:

On Nov 1, 2021 the fund buys Rs. 100 Crs of 10 year Power Finance Co. (corporate bond) with a modified duration of 6 years from the spot market at a yield of 7.50% (Price: Rs. 100). Subsequently, it is anticipated that the interest rate will rise in the near future. Therefore, to hedge the exposure in underlying corporate bond, the fund sells Nov 2022, 10 year benchmark Interest Rate Futures at yield of 7.00% (Price: Rs. 98.50) having a modified duration of 6 years.

Let us assume the following two scenarios:

Both the securities experience price changes in the same direction:

On Nov 15, 2021 the corporate bond and government bond yields move up by 10 basis points (0.10%) on back of deteriorating macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest Rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Profit on short selling of Interest Rate Futures = Rs. 100 Crs * 0.10% * 6 = Rs. 60 Lacs

This allows the fund manager to hedge the portfolio against interest rate movement using Interest Rate Futures.

Securities experience price changes in the opposite direction:

On Nov 15, 2021 the corporate bond yield moves up by 10 basis points (0.10%) on back of higher supply of corporate bonds & the government bond yield fell by 5 bps due to improving macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Loss on short selling of Interest Rate Futures = Rs. 100 Crs * 0.05% * 6 = (Rs. 30 Lacs)

On certain instances like the one illustrated above, it is observed that the co-relation between the corporate bonds and government securities may not be perfect over a short period of time leading to imperfect hedging which may result in higher loss/ gain from the strategy. The likelihood of such instances being prevalent on a sustainable basis is expected to be minimal due to strong correlation between government securities & bond markets over the medium to long term.

- (iv) The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

- (v) The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

II. INFORMATION ABOUT THE SCHEME:

A. WHERE WILL THE SCHEME INVEST – Detailed description of the instruments mentioned in Section I

Debt and Money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	: Stated value of the paper / Principal Amount
Coupon	: Zero; fixed or floating
Frequency	: Semi-annual; annual, sometimes quarterly
Maturity	: Bullet, staggered
Redemption	: FV; premium or discount
Options	: Call/Put
Issue Price	: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on Government Securities or treasury bill etc. They are mostly discounted instruments that are issued at a discount to face value.

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities include central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers) The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

(iii) **Regulators:** The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, G-Sec trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in Government Securities owned by RBI. The reporting of trade is done on the NSE Wholesale Debt Market segment.

(vii) Tracking Error

The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the scheme based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)	FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents (“US persons” as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant. FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts. The identification of US person will be based on one or more of following “US indicia”- • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number;

	• Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. FATCA due diligence will be applicable to each Unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws. FATCA provisions are relevant not only at on-boarding stage of Unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously. In case Unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date. Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI). All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form. AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above. Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to SEBI Circular Nos. CIR/MIRSD/2/2015 dated 26th August 2015 & CIR/MIRSD/3 /2015 dated 10th September 2015 and guidelines /circulars issued by SEBI from time to time.
