- ii) The fees and expenses of CDMDF shall be as follows:
 - During Normal times: (0.15% + tax) of the Portfolio Value charged on daily pro-rata basis.
 - During Market stress: (0.20% + tax) of the Portfolio Value charged on daily pro-rata basis.
 ("Portfolio Value" means the aggregate amount of portfolio of investments including cash balance without netting off of leverage undertaken by CDMDF).
- iii) Corporate debt securities to be bought by CDMDF during market dislocation include listed money market instruments. The long term rating of issuers shall be considered for the money market instruments. However, if there is no long term rating available for the same issuer, then based on credit rating mapping of CRAs between short term and long term ratings, the most conservative long term rating shall be taken for a given short term rating.
- iv) CDMDF shall follow the Fair Pricing document, while purchase of corporate debt securities during market dislocation as specified in aforesaid SEBI circular and guidelines issued by SEBI and AMFI from time to time.
- v) CDMDF shall follow the loss waterfall accounting and guidelines w.r.t. purchase allocation and trade settlement of corporate debt securities bought by CDMDF, as specified in the SEBI circular and further guidelines as issued.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The domestic debt markets are maturing rapidly with liquidity emerging in various debt segments through the introduction of new instruments and investors. The objective will be to allocate the assets of the Scheme between various money market and fixed income Securities with the objective of providing liquidity and achieving optimal returns.

The actual percentage of investment in various money markets and other fixed income Securities will be decided after considering the economic environment including interest rates and inflation, the performance of the corporate sector and general liquidity and other considerations in the economy and markets.

The investment team of the AMC will carry out rigorous in depth credit evaluation of the money market and debt instruments proposed to be invested in. The credit evaluation includes a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term/ long term financial health of the issuer.

Investments in Mutual Fund Units:

To avoid duplication of portfolios and to reduce expenses, the Scheme may also invest in schemes managed by the AMC (where the underlying securities are debt and Money Market Instruments maturing on or before the next business day) or in the schemes of other mutual funds (where the underlying securities are debt and Money Market Instruments maturing on or before the next business day) in line with the investment objectives of the Scheme and provided that aggregate inter-scheme investment made by all schemes managed by the AMC, either in its own schemes or of any other Mutual Fund, shall not exceed 5% (or such other permitted limit), of the Net Asset Value of the Fund.

Portfolio Turnover:

The Scheme being an open ended liquid scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. Therefore, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The Scheme has no specific target relating to portfolio turnover. Higher portfolio turnover rate may result into higher brokerage and transaction cost.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked with **CRISIL Liquid Debt A-I Index**.

The Scheme intends to have a portfolio mix of instruments, which are mainly captured by the Benchmark Index. Hence, the benchmark is an appropriate benchmark for the Scheme. The performance will be benchmarked to the Total Returns Variant of the Index.

A benchmark of a fund reflects the funds risk/return profile and is a measure for performance evaluation. The Scheme intends to invest in a portfolio of securities and the risk/return profile which is best captured by the following selected benchmark. CRISIL Liquid Debt A-I Index developed by CRISIL fulfills the above criteria's and hence is considered best suited as a benchmark for the Scheme for performance evaluation.

Further, in terms of SEBI Master circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024, the performance of the Scheme compared to its benchmark index will be reviewed at every meeting of the Board of the AMC and Trustee and corrective action as proposed will be taken in case of unsatisfactory performance.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme for each option will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The AMC will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

$$\text{NAV per unit (Rs.)} = \frac{(\text{Market / Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions})}{\text{No. of units outstanding under the Scheme / Option on the valuation day}}$$

The NAV shall be calculated up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the IDCW Option will be different after the declaration of the first IDCW. The AMC will calculate and disclose the NAVs for all the business days.

Units of the Scheme can be redeemed/ switched out at the Applicable NAV subject to prevailing exit load. The Repurchase Price however, will not be lower than 97% of the NAV subject to SEBI Regulations as amended from time to time.

Example: If the applicable NAV is Rs. 10.00, and the exit /repurchase load is 2 percent then the sales price will be Rs. 10.20 and the repurchase price will be Rs. 9.80

For other details such as policy on rounding off, procedure in case of delay in disclosure of NAV etc., kindly refer to SAI.

Section II

I. Introduction

A. Definitions/interpretation – Kindly refer to the Functional website link that contains detailed description. -

<https://www.itiamc.com/statutory-disclosure>

B. Risk factors

i. Standard Risk Factors:

- 1) Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- 2) As the price / value / interest rate of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down, depending on the various factors and forces affecting the capital markets.
- 3) Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- 4) The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- 5) The Sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of an amount of Rs. 1 lakh made by it towards setting up the Fund.
- 6) ITI Liquid Fund is not a guaranteed or assured return Scheme.

ii. Scheme specific risk factors

Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern.

1. Risks associated with investing in debt and / or Money Market Securities:

- Investments in money market instruments would involve a moderate credit risk, i.e. risk of an issuer's inability to meet the principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of credit worthiness of the issuer of such instruments.
- The NAV of the Scheme's Units, to the extent that the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

2. Risks associated with investing in Bonds:

- The NAV of the Scheme, to the extent invested in Debt Securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- Debt Securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is sold.
- Debt Securities are subject to the risk of the issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- The AMC may, considering the overall level of risk of the portfolio, invest in lower rated/unrated Securities offering higher yields.
- The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods.
- Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances.
- The Trustee has the right, in its sole discretion, to limit Redemptions (including suspending Redemption) in certain circumstances [outlined in Section III-B 'Restrictions on Redemptions']. There may be temporary periods when the monies of the Scheme are un-invested and no return is earned thereon. The inability of the Scheme to make intended Securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. By the same token, the inability to sell Securities held in the Scheme's portfolio due to the absence of a well-developed and liquid secondary market for Debt Securities could result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of the Securities held in the Scheme's portfolio.

- The liquidity and valuation of the Scheme's investments due to its holdings of unlisted Securities may be affected if they have to be sold prior to their target date of divestment.
- Debt Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to Debt Securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted Debt Securities that offer attractive yields within regulatory limits. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme's investment due to its holdings of the unlisted Securities may be affected if they have to be sold prior to the target date of investment.
- While Debt Securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market Securities, while fairly liquid, lacks a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the Security is finally sold.
- Money market Securities and debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its debt obligations (credit risk). These Securities may also be subject to price volatility due to factors such as changes in interest rates, general level of market liquidity and market perception of the creditworthiness of the issuer, among others (market risk). The AMC will endeavour to manage credit risk through in-house credit analysis. The Scheme may also, but is not obliged to, use various hedging products from time to time, as are available and permitted by SEBI, to attempt to reduce the impact of undue market volatility on the Scheme's portfolio. There is no guarantee that hedging techniques will achieve the desired result.
- The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the Securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- The NAV of the Scheme's Units, to the extent that the Scheme is invested in fixed income Securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income Securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income Securities can be expected to decline.
- To the extent the Scheme's investments are in floating rate debt instruments or fixed debt instruments swapped for floating rate return, they will be affected by interest rate movement (basis risk) - coupon rates on floating rate securities are reset periodically in line with the benchmark index movement. Normally, the interest rate risk inherent in a floating rate instrument is limited compared to a fixed rate instrument. Changes in the prevailing level of interest rates will likely affect the value of the Scheme's holdings until the next reset date and thus the value of the Scheme's Units. The value of Securities held by the Scheme generally will vary inversely with changes in prevailing interest rates. The Mutual Fund could be exposed to interest rate risk:
 - (i) due to the time gap in the resetting of the benchmark rates, and
 - (ii) to the extent the benchmark index fails to capture interest rate changes appropriately (spread risk): though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. markup) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments.
- **Settlement Risk (counterparty Risk):** Specific floating rate assets may also be created by swapping a fixed return into a floating rate return. In such a swap, there is the risk that the counterparty (who will pay floating rate return and receive fixed rate return) may default.
- **Liquidity Risk:** The market for floating rate Securities is still in its evolutionary stage and therefore may render the market illiquid from time to time, for such Securities that the Scheme is invested in.
- **Prepayment Risk:** The borrower/issuer of security may prepay the receivables prior to their respective due dates. This may result in change in the yield and tenor for the Scheme.
- Different types of Securities in which the Scheme may invest as given in the SID carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than government Securities. Further even among corporate bonds, bonds which are rated AAA are comparatively less risky than bonds which are AA rated.

3. Risks associated with Derivatives:

- Derivatives products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decisions of a fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- As and when the Scheme trades in derivative products, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that a derivative adds to the portfolio.
- Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:
 - (i) **Credit Risk** - this occurs when a counterparty defaults on a transaction before settlement and, therefore, the Scheme is compelled to negotiate with another counterparty at the then prevailing (possibly unfavorable) market price, in order to maintain the validity of the hedge.
 - (ii) **Market Liquidity Risk** - this is where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
 - (iii) **Model Risk** - this is the risk of mis-pricing or improper valuation of derivatives.
 - (iv) **Basis Risk** - this is when the instrument used as a hedge does not match the movement in the instrument/ underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.

4. Risks associated with investing in Securities Segment and Tri-party Repo trade settlement

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall is triggered and the contribution of the mutual fund is called upon to absorb settlement/ default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund.

5. Risks associated with transaction in Units through stock exchange(s):

In respect of transaction in Units of the Scheme through BSE and / or NSE (applicable to the facility to transact in the Units of the Scheme through the Stock Exchange mechanism provided by the AMC), allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

6. Risks associated with Restrictions on Redemption:

As outlined in Section I – 'Restrictions on Redemptions' the Trustee and the AMC may impose restrictions on redemptions when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets. Accordingly, such restriction may affect the liquidity of the Scheme and there may be a delay in investors receiving part of their redemption proceeds.

7. Risks associated with Segregated portfolio:

As outlined in Section I – 'Creation of segregated portfolio' the AMC / Trustee shall decide on creation of segregated portfolio of the Scheme in case of a credit event at issuer level i.e. downgrade in credit rating by a Credit Rating Agencies (CRA) or actual default (in case of unrated debt or money market instruments). Accordingly, Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. The Security comprised of segregated portfolio may not realize any value.

Further, Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk mitigation strategies

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. For risk control, the following may be noted:

Risk & Description specific to the Scheme	Risk mitigants / management strategy
Interest Rate Risk Price volatility due to movement in interest rates	Control the portfolio duration and periodically evaluate the portfolio structure with respect to existing interest rate scenario
Derivatives Risk Various inherent risks arising as a consequence of investing in derivatives.	Continuous monitoring of the derivatives positions and strict adherence to the regulations.
Credit Risk Risk associated with repayment of investment Performance Risk Risk arising due to change in factors affecting the market	Investment universe carefully selected to only include issuers with high credit quality Understand the working of the markets and respond effectively to market movements
Concentration Risk Risk arising due to over exposure in few securities	Invest across the spectrum of issuers and keeping flexibility to invest across tenor
Liquidity Risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	Control portfolio liquidity at portfolio construction stage. Having optimum mix of cash & cash equivalents along with the debt papers in the portfolio

Liquidity Risk Management Framework:

Pursuant to AMFI Best Practices Guidelines Circular No.93 / 2021-22 on Prudential norms for Liquidity Risk Management for Open-ended Debt Schemes dated 24th July, 2021 - All open-ended debt schemes (except Overnight Fund, Gilt Fund and Gilt Fund with 10-year constant duration) shall follow the requirements indicated as 'Mandatory' under the liquidity risk management framework stipulated

AMCs are advised to ensure that:

- all open-ended debt schemes (OEDS) (except Overnight Fund, Liquid Funds, Gilt Fund and Gilt Fund with 10-year constant duration) shall continue to hold at least 10% of their net assets in liquid assets in terms of SEBI Master circular no. SEBI Master circular SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 or as prescribed (at Annexure 1 of AMFI best practice guideline above), whichever is higher; and
- Liquid Funds shall comply with requirement of maintaining liquid assets at 20% as per para 1 of SEBI Master circular no. SEBI Master circular SEBI/HO/IMD/IMD-PoD-1/P/CIR/2024/90 dated June 27, 2024 or as prescribed (at Annexure 1 of AMFI best practice guideline above), whichever is higher.

Backstop facility in the form of investment in Corporate Debt Market Development Fund (CDMDF)

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/ bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus, this backstop facility will help fund managers of such debt schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of CDMDF, the debt schemes shall invest 25 bps of their AUM as on December 31, 2022 in the units of CDMDF. An incremental contribution to CDMDF shall be made every six months to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked in till winding up of the CDMDF.

Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

Investors are requested to read disclosure on investment of the scheme in CDMDF listed in sub-section 'C. How will the Scheme allocate its assets?' and sub-section 'D. Where will the Scheme invest' under Section II- 'Information about the scheme'.

Information about the scheme:

A. Where will the scheme invest

In case of securities where the principal is to be repaid in a single payout the maturity of the securities shall mean residual maturity. In case the principal is to be repaid in more than one payout then the maturity of the securities shall be calculated on the basis of weighted average maturity of security.

In case of securities with put and call options (daily or otherwise) the residual maturity of the securities shall not be greater than 91 days.

In case the maturity of the security falls on a non-business day then settlement of securities will take place on the next business day.

Inter-scheme transfers of securities having maturity of upto 91 days only shall be permitted in the Liquid scheme. The portfolio duration will undergo a change according to the expected movement in interest rates. Liquidity conditions and other macroeconomic factors affecting interest rates shall be taken into account for varying the portfolio duration. Under normal circumstances, if the interest rates move down, the duration of the portfolio shall be increased and vice versa.

It is expected that the modified duration for the Fund will be in a range of 1-3 months depending on the interest rate view. However, this can undergo a change in case the market conditions warrant it and according to the Investment Manager's view.

The Investment Manager may review the above pattern of investments based on views on interest rates and asset liability management needs.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. Securities in the debt market typically vary based on their tenure and rating. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities market is the oldest and the largest component of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Sec market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc. The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non- Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), reverse repo transactions (temporary buy with an agreement to sell the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI) and similar securities. In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and non government debt vary from time to time.

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. PSU / DFI / Corporate paper with a residual maturity of less than 1 year are actively traded and offer a viable investment option.

Following table exhibits various debt instruments along with current yields as on September 30, 2025.

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

Apart from the Investment Restrictions prescribed under the Regulations, internal risk parameters for limiting exposure to a particular scrip or sector may be prescribed from time to time to respond to the dynamic market conditions and market opportunities.

The AMC/Trustee may alter these above stated restrictions from time to time to the extent the Regulations change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for mutual funds to achieve its investment objective.

All the investment restrictions will be applicable at the time of making investments. Changes do not have to be effected merely because of appreciations or depreciations in value of the investments, or by reason of receipt of any rights, bonuses or benefits in the nature of capital or of any schemes of arrangement or of amalgamation, reconstruction or exchange, or at any repayment or redemption or other reason outside the control of the Fund resulting in any of the above limits getting breached. However, the AMC shall take appropriate corrective action as soon as possible taking into account the interests of the Unit holders.

Guidelines Governing Investment in Debt Securities

The AMC will follow a policy where, before any investment is made in any debt instrument, a research report will be prepared by the Chief Investment Officer/Fund Manager/Research analyst which will analyze the debt instruments. The research report shall be reviewed at least on a half yearly basis. The recommendations of the research report shall not be binding on the Fund Manager/ Chief Investment Officer.

Any purchase which is made against the recommendations of the research recommendation shall be backed by the reasons for the same by the concerned Fund Manager/Chief Investment Officer.

For investment into companies for which there is a pre existing research report that is not dated more than six months from the day of the proposed investment, the investment can be made by the Fund Manager directly. However, if the research report is dated more than six months without any subsequent update then a fresh report will be required.

The investment philosophy of the AMC shall be directed towards providing stable returns with a low risk strategy and capital appreciation/accretion through investment in debt instruments and related securities besides preservation of capital. The Scheme shall invest only in debt securities with credit rating of AA- and above.

Investment in GOISecurities

As per the Regulations and investment restriction guidelines issued by SEBI, the AMC will follow a policy wherein each decision of purchase/sale of government Securities and money market instruments shall be recorded.

Investment and security selection of all kind of debt instruments including GOI Securities, State Government Securities, and Government guaranteed debt is delegated to the fund manager with the responsibility on the fund manager to ensure conformity with the specified minimum credit rating standards for position credit risk and portfolio credit risk. All investments in GOI Securities shall be done in accordance with SEBI/RBI guidelines.

Investment restrictions pertaining to Derivatives

Derivatives products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and the decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. In terms of Circular No. MFD.BC.191/07.01.279/1999-2000 and MPD. BC.187/07.01.279/1999-2000 dated November 1, 1999 and July 7, 1999 respectively issued by the RBI permitting participation by mutual funds in interest rate swaps and forward rate agreements, the Fund will use derivative instruments for the purpose of hedging and portfolio balancing. Further, the guidelines issued by the RBI from time to time for forward rate agreements and interest rate swaps and other derivative products will be adhered to by the Fund.

Interest Rate Swaps (IRS)

An IRS is an agreement between two parties to exchange stated interest obligations for an agreed period in respect of a notional principal amount. The most common form is a fixed to floating rate swap where one party receives a fixed (pre-determined) rate of interest while the other receives a floating (variable) rate of interest.

Forward Rate Agreement (FRA)

FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

Example of a derivatives transaction –

Basic Structure of a Swap

Bank A has a six-month Rs. 10 crore liability, currently being deployed in call. Bank B has a Rs. 10 crore, six- month asset, being funded through call. Both banks are running an interest rate risk.

To hedge this interest rate risk, they can enter into a six-month MIBOR swap. Through this swap, A will receive a fixed pre-agreed rate (say 7%) and pay "call" on the NSE MIBOR ("benchmark rate"). Bank A paying at "call" on the benchmark rate will hedge the interest rate risk of lending in call. Bank B will pay 7% and receive interest at the benchmark rate. Bank A receiving of "call" on the benchmark rate will hedge its interest rate risk arising from its call borrowing.

The mechanism is as follows:

- Assume the swap is for Rs 10 crore March 1, 2024 to September 1, 2024. A is a fixed rate receiver at 7% and B is a floating rate receiver at the overnight compounded rate.
- On March 1, 2020, A and B will exchange only an agreement of having entered this swap. This documentation would be based on an International Swaps and Derivatives Association (ISDA) template.
- On a daily basis, the benchmark rate fixed by NSE will be tracked by them. On September 1, 2020 they will calculate the following:
- A is entitled to receive interest on Rs. 10 crore at 7% for 184 days i.e. Rs. 35.28 lakh, (this amount is known at the time the swap was concluded) and will pay the compounded benchmark rate.
- B is entitled to receive daily compounded call rate for 184 days and pay 7% fixed.
- On September 1, 2024, if the total interest on the daily overnight compounded benchmark rate is higher than Rs. 35.28

lakhs, A will pay B the difference. If the daily compounded benchmark rate is lower, then B will pay A the difference.

- Effectively, Bank A earns interest at the rate of 7% p.a. for six months without lending money for six months fixed, while Bank B pays interest @ 7% p.a. for six months on Rs. 10 crore, without borrowing for six months fixed.

As per the above mentioned RBI circulars, mutual funds are permitted to do interest rate swaps/forward rate agreements for edging purposes only. Accordingly, the AMC would undertake the same for similar purposes only. IRS and FRAs also have inherent credit and settlement risks. However, these risks are reduced as they are limited to the interest streams and not the notional principal amounts.

Investments in derivatives will be in accordance with the SEBI Regulations/guidelines and presently derivatives shall be used for hedging and/or portfolio balancing purposes, as permitted under the Regulations. The circumstances under which such transactions would be entered into would be when, using the IRS route, it is possible to generate better returns/meet the objective of the Scheme at a lower cost. For example, if buying a two-year MIBOR based instrument and receiving the two-year swap rate yields better return than buying the two-year AAA corporate instrument, the Scheme would endeavour to do that.

Alternatively, the Scheme would also look to hedge existing fixed rate positions if the view on interest rates is that they are likely to rise in the future.

These investment limitations/parameters as expressed (linked to the net asset/net asset value/capital) shall, in the ordinary course, apply as at the date of the most recent transaction or commitment to invest and changes do not have to be effected merely because, owing to appreciation or depreciation in value or by reason of the receipt of any rights, bonuses or benefits in the nature of capital or of any scheme of arrangement or for amalgamation, reconstruction or exchange, or at any repayment or redemption or other reason outside the control of the Trustee/ AMC, any such limits would thereby be breached.

Apart from the investment restrictions prescribed under the Regulations, internal risk parameters for limiting exposure to a particular scrip or sector may be prescribed from time to time to respond to the dynamic market conditions and market opportunities.

The Trustee/AMC may alter these above stated limitations from time to time (as also the provisions of the Trust Deed) and also to the extent the Regulations change so as to permit the Scheme to make its investments in the full spectrum of permitted investments in order to achieve its investment objective.

Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies. 3. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out). Such cases can only be considered if they are reasonably unpredictable and occur in spite of appropriate diligence of third parties, adequate and effective disaster recovery procedures and systems. Such restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period.
