I. Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the scheme.
- Quantum Nifty 50 ETF Fund of Fund is the name of scheme. The name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs. 1,00,000/- made by it towards setting up the Fund.
- The present scheme is not a guaranteed or an assured return scheme

II. Scheme Specific Risk Factors

- The Scheme will invest in the units of Quantum Nifty 50 ETF (Q Nifty), a mutual fund scheme Replicating / Tracking Nifty 50 Index - in the form of an Exchange Traded Fund. The Scheme's performance may depend upon the performance of Q Nifty. Any change in the investment policy or the fundamental attributes of Q Nifty could affect the performance of the Scheme. All risks associated with underlying scheme, including performance of their underlying stocks of Nifty 50 Index, asset class risk, passive investment risk, indirect taxation risk, etc., will therefore be applicable in this Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying scheme.
- The Scheme's NAV will react to the stock market movements, and movements in the NAV and tracking error of Quantum Nifty 50 ETF. The investor could lose money over short periods due to fluctuation in the Scheme's NAV in response to factors such as economic and political developments, changes in interest rates and perceived trends in stock prices market movements, and over longer periods during market downturns.
- Investors will bear the recurring expenses of the Scheme in addition to the expenses of Quantum Nifty 50 ETF that means investors' are bearing expense ratio of two schemes. Thus, the Scheme returns may be lower than the returns investors may obtain by directly investing in the Quantum Nifty 50 ETF.
- The Scheme's performance may be impacted by exit loads that may be charged at the time of redemption from the Underlying Scheme.
- The Portfolio disclosure of the Scheme will be limited to providing the particulars of the Quantum Nifty 50 ETF where the Scheme has invested and will not include the investments made by Quantum Nifty 50 ETF.

III. Risk Factors – Quantum Nifty 50 ETF

- Although the units of Quantum Nifty 50 ETF are listed on the stock exchange, there can be no assurance that an active secondary market for Quantum Nifty 50 ETF will develop or be maintained.
- Trading in units of Quantum Nifty 50 ETF on the stock exchanges may be halted because of market conditions or for reasons that in view of stock exchange authorities or SEBI, trading in the units of Quantum Nifty 50 ETF is not advisable. In addition, trading of units of Quantum Nifty 50 ETF is subject to trading halts caused by extraordinary market volatility and pursuant to circuit filter rules of the stock exchanges and SEBI. There can be no assurance that the requirements of stock exchanges necessary to maintain the listing of the units of Quantum Nifty 50 ETF will continue to be met or will remain unchanged.
- The units of Quantum Nifty 50 ETF may trade above or below their NAV. The NAV of Quantum Nifty 50 ETF will fluctuate with changes in the market value of its holdings. The trading prices of the units of Quantum Nifty 50 ETF will fluctuate in accordance with changes in its NAV as well as market supply and demand for the units of Quantum Nifty 50 ETF. However, given that units of Quantum Nifty 50 ETF can be created and redeemed in Creation Units Size directly with Fund, it is expected that large discounts or premiums to the NAV of Quantum Nifty 50 ETF will not sustain due to arbitrage opportunity available.
- Any changes in trading regulations by the stock exchanges or SEBI may affect the ability of market maker to arbitrage resulting into wider premium / discount to NAV of Quantum Nifty 50 ETF.

IV. Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honour his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the “Default Waterfall”. As per the waterfall mechanism, after the defaulter’s margins and the defaulter’s contribution to the default fund have been 7 appropriated, CCIL’s contribution is used to meet the losses. Post utilization of CCIL’s contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

V. Risk Associated with holding Government Securities & Treasury Bill

G-Secs are generally referred to as risk free instruments as sovereigns rarely default on their payments. However, as is the case with any financial instrument, there are risks associated with holding the G-Secs. Hence, it is important to identify and understand such risks and take appropriate measures for mitigation of the same. The following are the major risks associated with holding G-Secs:

Market risk – Market risk arises out of adverse movement of prices of the securities due to changes in interest rates. This will result in valuation losses on marking to market or realizing a loss if the securities are sold at adverse prices. To some extent, this risk can be mitigated by holding the bonds till maturity so that holder can realize the yield at which the securities were actually bought.

Reinvestment risk – Cash flows on a G-Sec includes a coupon every half year and repayment of principal at maturity. These cash flows need to be reinvested whenever they are paid. Hence there is a risk that the investor

may not be able to reinvest these proceeds at yield prevalent at the time of making investment due to decrease in interest rates prevailing at the time of receipt of cash flows by investors.

Liquidity risk – Liquidity in G-Secs is referred to as the ease with which security can be bought and sold i.e. availability of buy-sell quotes with narrow spreads. Liquidity risk refers to the inability of an investor to liquidate (sell) his holdings due to non-availability of buyers for the security, i.e., no trading activity in that particular security or circumstances resulting in distressed sale (selling at a much lower price than its holding cost) causing loss to the seller.

VI. Risk Associated with Investing in Liquid Schemes:

The Scheme may invest in Liquid Schemes of Mutual Funds for liquidity purpose, hence all the risk associated with the underlying liquid schemes, including performance of the underlying liquid schemes, Interest Rate Risk/Market Risk, Credit Risk or Default Risk, Liquidity and Settlement Risks, Re-investment Risk, Performance Risk etc., will therefore be applicable to the scheme. Any changes in the investment policy or the fundamental attributes of the underlying liquid schemes could affect the performance of the Scheme. Investors who intend to invest in the Scheme are required to and deemed to have understood the risk factors of the underlying liquid schemes.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/Plan(s). However, if such limit is breached during the NFO of the Scheme, the Fund will endeavor to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

The AMC does not make any judgments about the investment merit of a Quantum Nifty 50 ETF nor will it attempt to apply any economic, financial or market analysis. Passive approach eliminates active management risks in regard to over / underperformance vis-à-vis the benchmark.

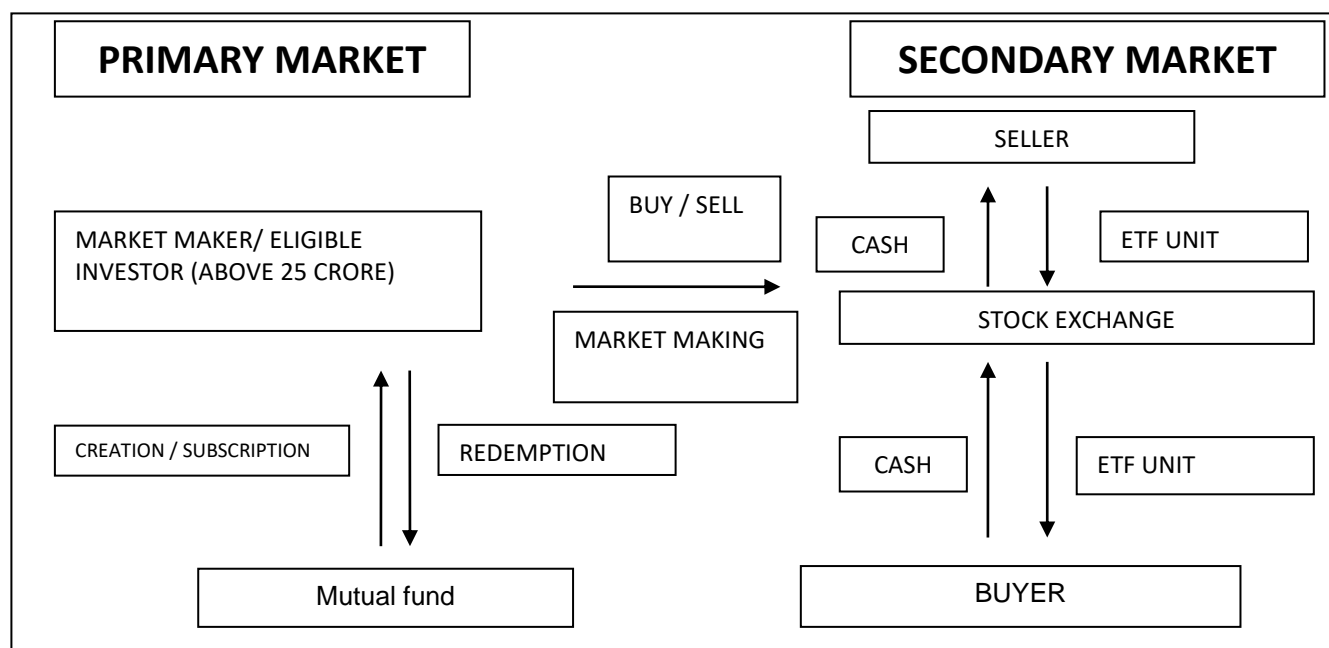

The Scheme will buy / sell units from the underlying scheme i.e. Quantum Nifty 50 ETF in Creation of Unit Size or through the secondary market through stock exchange route to achieve the investment objectives. The Scheme would endeavor to stay invested in the underlying scheme practically to the maximum extent possible at all times. However, the Scheme would also maintain some funds for meeting expenses and redemption purposes, in order to meet the liquidity requirements of the Scheme as prescribed in the Asset Allocation.

The AMC shall endeavor that the returns of Quantum Nifty 50 ETF Fund of Fund will replicate the returns generated by the underlying ETF subject to tracking error and expense of the Scheme. The AMC shall endeavor to keep tracking error as low as possible following the passive approach of the scheme.

Quantum Nifty 50 ETF

Quantum Nifty 50 ETF (Q Nifty) is an Open-Ended Scheme, listed on the National Stock Exchange of India Limited in the form of an Exchange Traded Fund (ETF) tracking the - Nifty 50 Index.

How Quantum Nifty 50 ETF works

Quantum Nifty 50 ETF can be bought and sold like an equity share of the stock exchange. A unit of Q Nifty represent approximately equal to the price of 1/10 (one-tenth) of the Nifty 50 Index.

RISK CONTROL/ RISK MANAGEMENT STRATEGY

Risk is an important part of the investment functions. Effective Risk Management is critical to Fund Management for achieving financial goals. Investments made by the Scheme shall be made in accordance with Investment Objective of the Scheme and provisions of SEBI (Mutual Funds) Regulations.

The Fund has identified following Risk and designed Risk Management Strategies, which is the part of the Investment Process to manage such risks.

Type of Risks	Risk Management Strategy
<p>Risk of deviating away from the investment objective of tracking Nifty 50 Total Index prices through investments in units of Quantum Nifty 50 ETF</p>	<p>The approach adapted to managing the Scheme would be a passive investment approach. The Scheme endeavors to stay near fully invested at all times.</p> <p>Brokerage paid for buying units on the exchange may also lead to increase in deviation. To mitigate the same, the Scheme will analyze from time to time different ways of taking exposure to units of Quantum Nifty 50 ETF from the perspective of risk and return and decide the same in the best interest of investors. For e.g.: Investing directly with the fund by cash creation / redemption in creation size whenever possible will help to avoid payment of double brokerage charges. However, the bid ask spreads in the underlying scheme units and time lag for availability of fund for deployment may lead to small deviations.</p>
<p>Price Risk</p>	<p>Buying / selling on the exchange: On account of the usual bid-ask spread, the Scheme may pay / receive premium / discount while purchasing / selling the underlying scheme units on the exchange.</p> <p>The fair value of the units of the Quantum Nifty 50 ETF would be calculated on a real time basis and orders would be placed near the real time fair value to avoid overpaying while purchases or receiving less while selling other than a reasonable bid ask spread.</p> <p>Buying / selling directly through the Quantum Nifty 50 ETF</p> <p>In case fund may opt to transact directly with the AMC for subscription/ redemption in creation size, there is risk involved of difference between actual transaction cost (Real time NAV) and End of Day applicable NAV given to investor. This will lead positively / negatively to the NAV of the fund and Tracking Error.</p>
<p>Liquidity Risk</p>	<p>It is found that sufficient liquidity is available in the market in the units of Quantum Nifty 50 ETF.</p> <p>In case of liquidity issues, the fund can opt for the alternative way of buying / selling units of the underlying scheme in the stock exchange. The underlying scheme units can then be bought / sold in order to deploy funds or to raise cash for redemptions.</p>

PROCEDURE AND RECORDING OF INVESTMENT DECISIONS:

The investment decisions for the scheme will be carried out by the designated fund manager.

The Managing Director and Chief Executive Officer is not involved in the investment decision making process.
