Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) of the Units will be calculated on every Business Day and for such other days as may be required for the purpose for transaction of Units. The NAV shall be calculated in accordance with the following formula, or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of the Scheme's Investments+ Receivables+ Accrued Income+ Other Assets- Accrued Expenses- Payables- Other Liabilities}}{\text{Number of Units Outstandings}}$$

The NAV of the Scheme will be calculated and declared upto 4 decimal places & the fourth decimal will be rounded off higher to the next digit if the fifth decimal is or more than 5 i.e., if the NAV is Rs. 10.45347 it will be rounded off to Rs. 10.4534.

Illustration of NAV: If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows: 10,45,34,345.34 / 10,00,000 = Rs. 10.4534 per unit (rounded off to four decimals).

The Mutual Fund will ensure that the repurchase price will not be lower than 95% of the Applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

B. Risk factors

Scheme Specific Risk Factors

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. Risks Associated with investing in Fund of Funds scheme

- As the investors are incurring expenditure at both the Fund of Funds level and the scheme into which the Fund of Funds invests, the returns that they may obtain may be materially impacted or may at times be lower than the returns that investors directly investing in such schemes obtain.
- While it would be the endeavour of the Fund Manager of the Fund of Funds scheme to invest in the underlying scheme in a manner, which will seek to maximize returns, the performance of the underlying Scheme may vary which may lead to the returns of the Fund of Funds Scheme being adversely impacted.
- The liquidity of the scheme's investment may be restricted by trading volumes, transfer process & settlement periods. It may also be affected by the liquidity of the underlying ETFs units. The liquidity for gold or silver ETFs units on the exchange may be low. There might be an impact cost for liquidating units on the exchange.
- The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying ETFs where the Scheme has invested and will not include the investments made by the underlying ETFs
- The NAV of the scheme shall be determined, based on the closing market price of the underlying ETFs on the exchange(s). In case the underlying ETFs are not traded on any particular business day then the NAV of the scheme shall be derived based on NAV of the underlying ETFs in accordance with valuation policy. Any delay in declaration of NAV of any particular underlying ETFs may result in delay of the computation of the NAV of the scheme.
- The scheme may invest in debt and money market instruments from time to time, as per the Asset Allocation pattern, which will have a different return profile compared to gold and silver returns profile.
- The scheme specific risk factors of the underlying scheme becomes applicable where a Fund of Funds invests in any underlying scheme. Investors who intend to invest in Fund of Funds are required to and are deemed to have read and understood the risk factors of the underlying scheme relevant to the Fund of Funds scheme that they invest in.

2. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

Risk of exposure in the Triparty Repo settlement Segment provided by CCIL emanates mainly on two counts –

- a. Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Triparty Repo transaction.
- b. Risk of default by a borrower in repayment.

3. Risks associated with investing in underlying Schemes (as applicable):

- **Liquidity Risk:** Trading in units of the ETFs on the Exchange may be halted because of market conditions or for reasons that in view of the Exchange authorities or SEBI, trading in units of the ETFs is not advisable. In addition, trading in units is subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange(s) and SEBI “circuit filter” rules as applicable from time to time. There can be no assurance that the requirements of the exchange/s necessary to maintain the listing of units of the ETFs will continue to be met or will remain unchanged.
- **Market Risk:** The value of the Units relates directly to the value of the gold and silver held by the underlying ETFs and fluctuations in the price of gold and silver could adversely affect investment value of the Units. Hence the investor may also lose money due to fluctuation in the prices of the Gold.
- **Regulatory Risk:** Any changes in trading regulations by the stock exchange (s) or SEBI may affect the ability of Authorised Participant/Market maker to arbitrage resulting into wider premium/ discount to NAV. Any changes in any other regulation relating to import and export of gold / silver or gold/ silver jewellery (including customs duty, sales tax and any such other statutory levies) may affect the ability of the ETFs to buy/sell gold and silver against the purchase and redemption requests received.
- **Passive Management of Investments:** The underlying ETFs shall follow a passive investment strategy. The performance may be affected by the general price decline in the gold and silver prices. The ETFs shall invest in Gold / Silver regardless of their investment merit.
- **Tracking Error:** Tracking error may have an impact on the performance of the underlying ETFs. Tracking error may be accounted by the various reasons which includes but not limited to expenses, cash balance to meet redemptions, payout, delay in purchase/sale of gold / silver, illiquidity, delay in realization of sale proceeds, buy/sell transactions at different point in time which may not correspond to the closing price, transaction cost (including taxes, insurance etc), creation of lot size etc. The AMC would monitor the tracking error of the underlying ETFs on selection and ongoing basis Tracking error this may vary due to the volatility in the markets and any other reasons beyond the control of the Fund Manager. There can be no assurance or guarantee that the underlying scheme will achieve any particular level of tracking error relative to performance of the benchmark Index
- **Redemption Risk:** Investors may note that even though the underlying ETFs could be an open ended scheme, the ETFs would repurchase units in creation unit size only. Thus, if the unit holding is less than the creation unit size then it can be sold only through the secondary market on the exchange where the units are listed, subject to rules and regulations of the Stock Exchange.
- The market price of the ETFs unit like any other listed security is largely dependent on two factors viz. the intrinsic value of the unit (or NAV) and demand and supply of the units in the market. Sizeable demand or supply of the units in exchange may lead to market price of the units to quote at premium or discount to NAV. And hence the units of the underlying ETFs may trade above or below the NAV.
- The gold and the silver price reflects the prices of gold and silver at a point in time, which is the price at close of business day. The underlying ETFs, however, may trade these securities at different points in time during the trading session and therefore the prices at which ETFs trades may not be identical to the closing price of gold or silver
- **Currency Risk:** The formula for deriving the NAV of the units of the underlying ETFs is based on the imported (landed) value of the gold, which is computed by multiplying international market price by US Dollar value.

Hence the value of NAV or Gold or Silver will depend upon the conversion value and attracts all the risk associated with such conversion.

- **Physical Gold / Silver:** There is a risk that part or all of the underlying ETF's gold / silver could be lost, damaged or stolen. Access to the underlying ETF's gold / silver could also be restricted by natural events or human actions. Any of these actions may have adverse impact on the operations of the underlying ETFs and consequently on investment in units.
- **Counter party Risk:** There is no Exchange for physical gold / silver in India. The Mutual Fund may have to buy or sell gold / silver from the open market, which may lead to counter party risks for the Mutual Fund for trading and settlement.
- **Operational Risks:** Gold Exchange Traded Funds and Silver Exchange Traded Funds are relatively new products and their value could decrease if unanticipated operational or trading problems arise. These funds are therefore subject to operational risks. In addition, investors should be aware that there is no assurance that gold / silver will maintain its long-term value in terms of purchasing power. In the event that the price of gold / silver declines, the value of investment in Units is expected to decline proportionately.
- The underlying ETFs may not be able to acquire or sell the desired number of units of gold / silver due to conditions prevailing in the market, such as, but not restricted to circuit filters on the ETFs (if any), liquidity and volatility in gold / silver prices
- Governments, central banks and related institutions, own a significant portion of the aggregate world gold holdings. If one or more of these institutions decides to sell in amounts large enough to cause a decline in world gold prices, the price of Units of the underlying ETFs will be adversely affected.
- Conversion of underlying physical gold into the Units of the underlying ETFs may attract capital gain tax depending on acquisition cost and holding period.

4. Risk Factors Associated with Investments by the underlying schemes in Exchange Traded Commodity Derivatives (ETCDs):

- An exchange traded commodity derivative is a derivative instrument that mimics the price movements of an underlying commodity, allowing an investor exposure to the commodity without physical purchase.
- **Liquidity Risk:** While ETCDs that are listed on an exchange carry lower liquidity risk, the ability to sell these contracts is limited by the overall trading volume on the exchanges. The liquidity of the Schemes' investments is inherently restricted by trading volumes of the ETCD contracts in which it invests. Additionally, change in margin requirements or intervention by government agencies to reduce overall volatility in the underlying commodity could lead to adverse impact on the liquidity of the ETCD.
- **Price risk:** ETCDs are leveraged instruments hence, a small price movement in the underlying security could have a large impact on their value. Also, the market for ETCDs is nascent in India hence, arbitrages can occur between the price of the physical commodity and the ETCD, due to a variety of reasons such as technical issues and volatile movement in the price of the physical good. This can result in mispricing and improper valuation of investment decisions as it can be difficult to ascertain the amount of the arbitrage.
- **Settlement risk:** ETCDs can be settled either through the exchange or physically. The inability to sell ETCDs held in the Schemes' portfolio in the exchanges due to the extraneous factors may impact liquidity and would result in losses, at times, in case of adverse price movement. Wherein the underlying commodity is physically delivered in order to settle the derivative contract, such settlement could get impacted due to various issues, such as logistics, Government policy for trading in such commodities.

5. Risks associated with investing in fixed income securities:

- **Market Risk/Interest Rate Risk:** The Net Asset Value (NAV) of the underlying Scheme(s), to the extent invested in Debt and Money Market securities, will be affected by changes in the general level of interest

rates. The NAV of the underlying Scheme(s) is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates. Liquidity Risk: The liquidity of debt security may change depending on market conditions leading to changes in the liquidity premium linked to the price of the security. At the time of selling the security, the security can become illiquid leading to loss in the value of the portfolio.

- Credit Risk: Investments in Fixed Income Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
- Price Risk: Government securities where a fixed return is offered run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. The new level of interest rate is determined by the rates at which government raises new money and/or the price levels at which the market is already dealing in existing securities. The price-risk is not unique to Government Securities. It exists for all fixed income securities. However, Government Securities are unique in the sense that their credit risk generally remains zero. Therefore, their prices are influenced only by movement in interest rates in the financial system. Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- Different types of fixed income securities in which the Scheme(s) would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme(s) risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated.
- The underlying schemes may, considering the overall level of risk of the portfolio, invest in lower rated / unrated securities offering higher yields as well as zero coupon securities that offer attractive yields. This may increase the absolute level of risk of the portfolio.
- As zero-coupon securities does not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero-coupon securities is higher. The underlying schemes may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio
- The underlying schemes at times may receive large number of redemption requests, leading to an asset liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- underlying schemes performance may differ from the benchmark index to the extent of the investments held in the debt segment, as per the investment pattern indicated under normal circumstances.

6. Risks Associated with segregated portfolio

- 1) Unit holder holding units of Segregated Portfolio may not able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

7. Risk associated with investments in Gold and Silver by underlying schemes:

A. Several factors that may affect the price of gold/commodity are as follows:

Global gold supplies and demand, which is influenced by factors such as forward selling by gold producers, purchases made by gold producers to unwind gold hedge positions. Productions and cost levels in major gold producing countries can also impact gold prices. Further, Central bank purchases and sales also impact price of Gold. The prices of gold are also affected: -

- Investors' expectations with respect to the rate of inflation
- Currency exchange rates
- Interest rates
- Investment and trading activities of hedge funds and commodity funds
- Global or regional political, economic or financial events and situations
- Changes in indirect taxes or any other levies
- Demand & supply
- Movement/trade of gold that may be imposed by RBI
- Trade and restrictions on import/export of gold or gold jewellery etc

The returns from gold may underperform returns from the various general securities markets or different asset classes other than gold. Different types of securities tend to go through cycles of out-performance and underperformance in comparison to the general securities markets.

The scheme may invest in Gold ETFs. The units may trade above or below their NAV. The NAV of the underlying Scheme will fluctuate with changes in the market value of the holdings. The trading prices will fluctuate in accordance with changes in their NAV as well as market supply and demand. However, given that units of Gold ETFs can be created and redeemed in Creation Units, it is expected that large discounts or premiums to the NAV will not sustain due to arbitrage opportunity available. Value of Gold ETFs Units could decrease if unanticipated operational or trading problems arise.

In case of investment in Gold ETFs, the scheme can subscribe to the units of Gold ETFs according to the value equivalent to unit creation size as applicable. If subscriptions received are not adequate enough to invest in creation unit size, the subscriptions may be deployed in debt and money market instruments which will have a different return profile compared to gold returns profile,

B. Several factors that may affect the price of Silver are as follows

Global Silver supplies and demand, which is influenced by factors such as forward selling by Silver producers, purchases made by Silver producers to unwind Silver hedge positions, government regulations, productions and cost levels in major Silver producing countries.

- a) Investors' expectations with respect to the macro-economic indicators;
- b) Currency exchange rates;
- c) Interest rates;
- d) Investment and trading activities of hedge funds and commodity funds; and
- e) Global or regional political, economic or financial events and situations.
- f) In addition, investors should be aware that there is no assurance that Silver will maintain its long-term value. In the event that the price of Silver declines, the value of investment in units is expected to decline proportionately.

- g) Changes in indirect taxes like custom duties for import, sales tax, VAT or any other levies will have an impact on the valuation of Silver and consequently the NAV of the Scheme.
- h) Demand side and/or supply side constraints in domestic and/or international markets.

8. Risk associated with schemes investing in Gilt securities by underlying schemes

Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in prices is a function of the existing coupon, days to maturity and the increase or decrease in interest rates. Price-risk is not unique to government securities but is true for all fixed income securities. The default risk however, in respect of Government securities is zero. Therefore, their prices are influenced only by movement in interest rates in the financial system. On the other hand, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced by credit standing of the issuer as well as the general level of interest rates.

Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

C. Risk Mitigation Strategies:

Risks associated with investments	
Concentration Risk Concentration risk represents the probability of loss arising from heavily lopsided exposure to a particular group of sectors or securities.	The underlying schemes being a passively managed scheme, it will invest in the securities included in its Underlying Index.
Market/Volatility Risk The scheme is vulnerable to movements in the prices of securities invested by the scheme, which could have a material bearing on the overall returns from the scheme.	Market risk is a risk which is inherent to an equity scheme. The underlying schemes being a passively managed scheme, it will invest in the securities included in its Underlying Index. The actively managed underlying Scheme may use derivatives to limit this risk.
Liquidity risk The liquidity of the Scheme's investments is inherently restricted by trading volumes in the securities in which it invests.	As such the liquidity of securities that the underlying scheme invests into could be relatively low. The underlying Scheme may try to maintain a proper assetliability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.

II. Information about the scheme:

A. Where will the scheme invest?

Subject to the Regulations, the corpus of the Scheme can be invested in any (but not exclusively) of the following securities:

- In the Units of Gold and/or Silver ETFs registered with SEBI and/or permitted by SEBI.

- from time to time).
- Units of liquid funds.

These investment restrictions shall be applicable at the time of investment. Changes, if any, do not have to be effected merely because, owing to appreciations or depreciations in value, or by reason of the receipt of any rights, bonuses or benefits in the nature of capital or of any Schemes of arrangement or for amalgamation, reconstruction or exchange, or at any repayment or redemption or other reason outside the control of the Fund, any such limits would thereby be breached. If these limits are exceeded for reasons beyond its control, AMC shall as soon as possible take appropriate corrective action, taking into account the interests of the Unit holders.

In addition, certain investment parameters may be adopted internally by AMC, and amended from time to time, to ensure appropriate diversification / security for the Fund. The Trustee Company / AMC may alter these above stated limitations from time to time, and also to the extent the SEBI (Mutual Funds) Regulations, 1996 change, so as to permit the Scheme to make its investments in the full spectrum of permitted investments for Mutual Funds to achieve its investment objective.
