B) Utilization of Funds & Risk Mitigation

Transactions are accepted before the cut off time as specified by SEBI from time to time. All the transactions are reported in our Registrars and Transfer Agents system by the respective branches across India and funds get deposited into the banks accounts. On the basis of clear funds being available for deployment, cash flows are reported to the fund manager on a timely basis.

The inputs regarding cash flows by various modes of acceptance will be planned on a daily basis. The subscription/redemption request will also be reported and used as a basis for investing in Axis Silver ETF on realization of funds. This will also form the basis for subsequent deployment of funds in Axis Silver ETF. The deployment will be carefully planned on the basis of the mode of acceptance of instrument to moderate tracking error. Fund Manager will either execute trade of units of Axis Silver ETF on exchange or subscribe

directly to Axis Silver ETF (direct via AMC) depending on market dynamics in the best interest of investors.

For investments in basket size, the scheme will preferably invest /buy directly from Axis Silver ETF.

The other sources of tracking error could be:

1. Axis Silver Fund of Fund may buy/sell baskets at different times not corresponding to closing prices.
2. Large disinvestment to meet redemptions.

PORTFOLIO TURNOVER

The Scheme being an open ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

For details of risk factors relating to use of Derivatives, the investors are advised to refer to Scheme Specific Risk Factors.

For details pertaining to Risk Controls and Risk Mitigation refer Point no. C Part I of Section II of the Scheme Information Document

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market Value of Investments or Fair Value of Scheme's Investments} + \text{Current Accrued Income Assets including Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Option.

The NAVs will be calculated and disclosed on all the Business Days.

Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

Particulars	Amount in Rs
Market or Fair Value of Scheme's Investments.... (A)	10,00,00,000.00
Add: Current Assets including Accrued Income... (B)	75,34,345.00
Less: Current Liabilities and Provisions. (C)	(30,00,000.00)
Net Assets (A+B-C)	10,45,34,345.00

No. of Units outstanding under Scheme on the Valuation Day: 100,00,000

The NAV per unit will be computed as follows: $10,45,34,345.34 / 100,00,000 = \text{Rs. } 10.4534$ per unit (rounded off to four decimals)

The Mutual Fund will ensure that the Redemption Price will not be lower than 95% of the NAV.

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI

Illustration: Impact of Expense Ratio on Scheme's return:

Expense ratio, normally expressed as a percentage of Average Assets under Management, is calculated by dividing the permissible expenses under the Regulations by the average net assets.

To further illustrate in rupee terms the above, for the Scheme under reference, suppose an Investor invested Rs. 10,000/- (after deduction of stamp duty and transaction charges, if any) under the Growth Option, the impact of expenses charged will be as under:

Sr. No.1	Particulars	Regular Plan	Direct Plan
A.	Amount invested at the beginning of the year (Rs.)	10,000	10,000
B.	Returns before expenses (Rs.)	1,500	1,500
C.	Expenses other than the expenses mentioned in 'D' below (Rs.)	50	50
D.	Marketing & Selling expense incl. agent commission (Rs.)	150	0
E.	Returns after expenses at the end of the year (Rs.) [B – (C + D)]	1300	1450
	Returns after expenses at the end of the year (in %) [(E/A) – 1]	13%	14.5%

Note(s):

- The purpose of the above illustration is purely to explain the impact of expense ratio charged to the Plan(s) under the Scheme and should not be construed as providing any kind of investment advice or guarantee of returns on investments.
- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan of the Scheme will be lower to the extent of the distribution expenses/ commission
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to seek appropriate advice.

D. LOAD STRUCTURE

Load is an amount which is paid by the Investor to redeem the Units from the Scheme. This amount is used by the AMC to pay commission to the distributors and to take care of other marketing and selling expenses. Load amounts are variable and are subject to change from time to time. The Investor is requested to check the prevailing Load structure of the Scheme before investing.

For any change in Load structure AMC will issue an addendum and display it on the website/Investor Service Centres.

Under the Scheme, the AMC/Trustee reserves the right to change / modify the Load structure if it so deems fit in the interest of smooth and efficient functioning of the Mutual Fund. If there is a breach of the 25% limit by any Investor over the quarter, a rebalancing period of one month would be allowed and thereafter the Investor who is in breach of the rule shall be given 15 days' notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic Redemption by the Mutual Fund at the Applicable NAV on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Section II

I. Introduction

A. Definitions/interpretation

For details refer website of Axis Mutual Fund: <https://www.axismf.com/statutory-disclosures>

B. Risk factors

Scheme Specific Risk Factors

The Scheme will be investing primarily in units of the underlying fund, which in turn invests in silver and silver related instruments. Hence the Scheme's performance may depend upon the performance of the underlying fund. Any change in the investment policy or the fundamental attributes of the underlying fund will affect the performance of the Scheme. Investments in the underlying fund, which will be investing in silver and silver related instruments, will have all the risks associated with investments in silver and silver related instruments.

The portfolio disclosure of the Scheme will be largely limited to the investments made by the Scheme.

Risk factors related to Underlying Fund

1. The NAV of Silver ETFs is closely related to the value of silver held by the Silver ETF. The value (price) of silver may fluctuate for several reasons and all such fluctuations will result in changes in the NAV of silver ETFs. The factors that may affect the price of silver, among other things, include demand and supply for silver in India and in the global market, Indian and foreign exchange rates, interest rates, inflation trends, trading in silver as commodity, legal restrictions on the movement/trade of silver that may be imposed by RBI, Government of India or countries that supply or purchase silver to/from India, trends and restrictions on import/export of silver jewellery in and out of India, etc.
2. Listing of the units of the Silver ETFs does not necessarily guarantee their liquidity and there can be no assurance that an active secondary market for the units will develop or be maintained. Consequently, the ETF may quote below its face value / NAV. The market price of the Units of the ETF, like any other listed security, is largely dependent on two factors, viz., (1) the intrinsic value of the Unit (or NAV), and (2) demand and supply of Units in the market. Sizeable demand or supply of the Units in the Exchange may lead to market price of the Units to quote at premium or discount to NAV. To that extent the return from Axis Silver Fund of Fund shall differ from the return on silver.
3. Silver ETFs would repurchase/redeem Units in Creation Unit size only. Thus unit holdings less than the Creation Unit size can only be sold through the secondary market on the Stock Exchange where these units are listed, subject to the rules and regulations of the Exchange.
4. The scheme will subscribe according to the value equivalent to Unit Creation size as applicable for each of the underlying fund. When subscriptions received are not adequate enough to invest in Creation Unit size, the subscriptions may be deployed in debt and money market instruments which will have a different return profile compared to silver returns profile. The scheme may also invest in such instruments to meet liquidity requirements. As a result, the returns of the scheme may differ from the underlying ETF(s).

Risks associated with investments in Fixed Income Securities

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Liquidity Risk: The liquidity of money market instruments may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the instrument. At the time of selling

the security, the security can become illiquid, leading to loss in value of the portfolio.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Schemes' investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio. However, the Scheme shall not invest in unlisted debt instruments including commercial papers, except Government Securities and other money market instruments.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Risks associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

Risks associated with Segregated Portfolio

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.

Listing of units of segregated portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

C. Risk mitigation strategies

Risk control measures for Underlying ETF

Tracking error risk: The performance of the Scheme may not commensurate with the performance of the benchmark index on any given day or over any given period. Such variation, referred to as tracking error may impact the performance of the Scheme.

Mitigation: The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible.

Custody Risk - There is a risk that part or all of the physical Silver belonging to the underlying Scheme could be lost, damaged or stolen.

Mitigation - In order to ensure safety, the said Silver will be stored with custodian in its vaults. The custodian will insure/cover all such risks.

Liquidity Risk - Inability to buy / sell appropriate quantity of Silver

Mitigation - The underlying scheme may retain certain investments in cash or cash equivalents for its day-to-day liquidity requirements. The Trustee (subject to applicable regulations) in general interest of the Unit holders of the underlying scheme offered under its Scheme Information Document and keeping in view of the unforeseen circumstances / unusual market conditions, may limit the total number of Units, which can be redeemed on any Business Day.

Quality and Purity Risk

Mitigation - Physical Silver purchased by the Scheme will be of fineness (or purity) of 999 parts per 1,000 (99.9%) or higher. Custodian will accept physical Silver only if the Silver is in compliance with the Good Delivery norms as specified by LBMA.'

Risk control measures with respect to Debt & Money Market Instruments

Market Risk / Interest Rate Risk: Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The price movement up and down in fixed income securities will lead to possible movements in the NAV.

Mitigation - In a rising interest rates scenario the scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.

Credit risk or default risk: It refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Mitigation- Apart from the basic examination, management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the Scheme will ensure that these instruments are sufficiently backed by assets.

Tracking Error and tracking Difference	<p>Tracking Error</p> <p>Tracking error is a measure of the difference in returns from the Scheme and the returns from the index. It is computed as the standard deviation of the difference between the daily returns of the underlying benchmark and the NAV of the Scheme on an annualized basis.</p> <p>NAV of the Scheme is dependent on valuation of Silver. Silver has to be valued based on the formula prescribed by SEBI. NAV so computed may vary from the price of Silver in the domestic market.</p> <p>Tracking error could be the result of a variety of factors including but not limited to: Delay in the purchase or sale of Silver due to Illiquidity of Silver, Delay in realisation of sale proceeds, Creating a lot size to buy the required amount of Silver</p> <p>The Scheme may buy or sell the Silver at different points of time during the trading session at the then prevailing prices which may not correspond to its closing prices. The potential for trades to fail, which may result in the Scheme not having acquired Silver at a price necessary to track the benchmark price.</p> <p>The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses.</p> <p>Disinvestments to meet redemptions, recurring expenses, etc.</p> <p>Execution of large buy / sell orders</p> <p>Realisation of Unit holders' funds</p> <p>The Scheme will endeavor to minimise the tracking error by:</p> <p>Rebalancing of the portfolio.</p> <p>Setting off of incremental subscriptions against redemptions.</p>

	<p>The tracking error i.e. the annualised standard deviation of the difference in daily returns between physical silver and the NAV of Silver ETF based on past one year rolling over data (For ETFs in existence for a period of less than one year, annualized standard deviation shall be calculated based on available data) shall not exceed 2% or as may be prescribed by regulations from time to time.</p> <p>In case of unavoidable circumstances in the nature of force majeure which are beyond the control of the AMCs, the tracking error may exceed 2%, for which approval of Board of AMC and Trustees shall be taken and the same shall prominently be disclosed on the website of the AMC.</p> <p>Tracking difference - the ETF Scheme shall also disclose the tracking difference i.e. the difference of returns between physical silver and the ETF Scheme, on the website of the AMC on monthly basis for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.</p>
