2. Commercial Paper (CPs) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. They are issued at a discount to the face value as may be determined by the issuer. CP is traded in secondary market and can be freely bought and sold before maturity.
3. Treasury Bills (T-Bills) are issued by the Government of India to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, and 364 days. T-bills are issued at a discount to their face value and redeemed at par.
4. Triparty Repo
5. Securities created and issued by the Central Governments as may be permitted by RBI, securities guaranteed by the Central Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). The scheme will invest in stocks comprising the Nifty Smallcap 250 index in the same proportion as in the index with the objective of achieving returns equivalent to the Total Returns Index of Nifty Smallcap 250 index by minimizing the performance difference between the benchmark index and the scheme. The Total Returns Index is an index that reflects the returns on the index from index gain/ loss plus dividend payments by the constituent stocks.

The scheme will primarily invest in the securities constituting the underlying index. However, due to changes in underlying index the scheme may temporarily hold securities which are not part of the index. For example, the portfolio may hold securities not included in the respective underlying index as result of certain changes in the underlying index such as reconstitution, addition, deletion etc. The fund manager's endeavour would be to rebalance the portfolio in order to mirror the index; however, there may be a short period where the constituents of the portfolio may differ from that of the underlying index.

These investments which fall outside the underlying index as mentioned above shall be rebalanced within a period of 7 calendar days.

Derivatives Strategy:

The Scheme may take exposure to derivatives for hedging and/or non-hedging purpose as permitted by regulations from time to time. Such exposure to derivative instruments will be in line with the investment objective and overall strategy of the scheme.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies".

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments

In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2021 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2021, when the Applicable NAV = Rs. 10/-

Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit

Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

$$\text{Redemption Price} = \text{Applicable NAV} * (1 - \text{Exit Load})$$

Say, in the above example the exit load applicable is:

- a. For exit on or before 12 months from the date of allotment – 1.00%
- b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2022; say December 1, 2021, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned}\text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 1\%) = \text{Rs. } 11.88/-\end{aligned}$$

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2022; say April 1, 2022, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

$$\begin{aligned}\text{Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 12 * (1 - 0) = \text{Rs. } 12/-\end{aligned}$$

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to paragraph 8.1.5 of the SEBI Master Circular for mutual funds dated June 27, 2024.

B. NEW FUND OFFER (NFO) EXPENSES

- 3) It is assumed that expenses charged are evenly distributed throughout the year. Tax impact on customers has not been considered due to the individual nature of this impact.
- 4) Calculations shown in the above table are for illustrative and understanding purposes only and actual returns may differ from those considered above

D. LOAD STRUCTURE

Load is an amount which is paid by the investor to subscribe to the units or to redeem the units from the scheme. Load amounts are variable and are subject to change from time to time. For the current applicable structure, please refer to the website of the AMC (www.sbimf.com) or contact your distributor.

The following table illustrates the expenses that the investors will incur on their purchases/ sales of Units during the continuous offer (including Systematic Investment Plan) under this scheme:

Nature of expense	Charge (% of NAV)

The charges stated above are a percentage of the NAV.

Please note that no Exit Load shall be levied for switching between Plans within the said Scheme.

The AMC reserves the right to introduce a load structure, levy a different load structure or remove the load structure in the scheme at any time after giving notice to that effect to the investors. Goods & Service tax on exit load shall be paid out of the exit load proceeds and exit load net of goods & service tax shall be credited to the scheme.

The upfront commission on investment, if any, shall be paid to the ARN Holder directly by the investor, based on the investor's assessment of various factors including service rendered by the ARN Holder.

For any change in load structure AMC will issue an addendum and display it on the website/OPAT of SBI MF.

Any imposition or enhancement in the load shall be applicable on prospective investments only. At the time of changing the load structure, the mutual fund may consider the following measures to avoid complaints from investors about investment in the schemes without knowing the loads:

- iv. Further, the account statements shall continue to include applicable load structure.

In accordance with SEBI Regulations, the repurchase price will not be lower than 95% of the NAV

The investor is requested to check the prevailing load structure of the Scheme before investing.

Section II

I. Introduction

A. Definitions/interpretation

Please refer the definitions/interpretation as disclosed on our website under: <https://www.sbimf.com/offer-document-sid-kim>

B. Risk factors

- Scheme specific risk factors

- a. The Scheme would be investing in Securities covered by Nifty Smallcap 250 index, equity derivatives and Money Market instruments including triparty repo, commercial papers, commercial bills, treasury bills, Government securities having an unexpired maturity up to one year, call or notice money, certificate of deposit, usance bills, and any other like instruments as specified by the Reserve Bank of India from time to time and units of liquid mutual fund. The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the right to limit redemptions (including suspending redemptions) under certain circumstances will be in accordance with Paragraph 1.12 of SEBI Master Circular.
- b. **Investments under the scheme may also be subject to the following risks:**

I. Investment in Equities:

- a. Equity and Equity related instruments are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro-economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.
- b. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances. Similarly, the inability to sell securities held in the scheme portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the scheme portfolio.
- c. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities.
- d. **Risk pertaining to Nifty Smallcap 250 Index:** Equities are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity instruments is due to various micro and macroeconomic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.

II. Risk associated with investing in Fixed Income Securities

- a. **Credit risk:** Credit risk or default risk refers to the risk which may arise due to default on the part of the issuer of the fixed income security (i.e. will be unable to make timely principal and interest payments on the security). Because of this risk debentures are sold at a yield spread above those offered on Treasury securities, which are sovereign obligations and generally considered to be free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the actual changes in the perceived level of credit risk as well as the actual event of default.

- b. Interest Rate risk: This risk is associated with movements in interest rate depends on various factors such as government borrowing, inflation, economic performance etc. The value of investments will appreciate/depreciate if the interest rates fall/rise. However if the investments are held on till maturity of the investments, the value of the investments will not be subjected to this risk.
- c. Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from the securities may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
- d. Liquidity or Marketability Risk: This refers to the ease at which a security can be sold at or near its true value. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is characteristic of the Indian fixed income market.
- e. Different types of fixed income securities in which the Scheme would invest carry different levels and types of risk. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher level of risk than Government securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risky than bonds, which are AA rated
- f. The Net Asset Value (NAV) of the Scheme, to the extent invested in Money Market securities, will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

III. Tracking Error Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the respective scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the Scheme based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any. For Index Fund in existence for a period of less than one year, the annualized standard deviation shall be calculated based on available data.

IV. Tracking Difference Risk

The Fund Manager may not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index. Tracking Difference is the Difference of returns between the Scheme and the Benchmark Index annualized over 1 year, 3 Year, 5 Year, 10 year and Scheme Since Inception period. It will be the endeavor of the fund manager to keep the tracking difference as low as possible. Tracking Difference shall be disclosed only if the scheme has completed 1 year period. The Fund must maintain a Tracking Difference of not more than 1.25% on a 1 year basis. If the tracking difference over one year period for Debt ETFs/ Index Funds is higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any. Tracking difference is to be disclosed on a monthly basis on www.sbimf.com and AMFI website.

V. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the underlying Index, the scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select securities or to take defensive positions in declining markets.

- VI. The scheme restricts its investments only in the Securities of the underlying index which represents a particular sector/theme and will therefore be subject to the risks associated with such concentration. The sector, under certain market conditions, could underperform returns from securities included in a broad

market equity index or other asset classes. Also, the number of stocks in underlying index is low and hence the concentration on a few small cap stocks could be significantly high. Due to such sector and stock specific concentration the scheme could be exposed to higher levels of volatility and market risk than would generally be the case in a more diverse fund portfolio of equity securities.

c. Risks associated with investment in units of mutual fund:

Investment in Mutual Fund Units involves investment risks, including but not limited to risks such as liquidity risk, volatility risk, default risk including the possible loss of principal.

- Liquidity risk – The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees may limit redemptions (including suspending redemptions) under certain circumstances as specified under the Scheme Information Document.
- Volatility risks: There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification across companies and sectors.
- Default risk - Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.

d. Risk Associated with investing in derivatives

- a. The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance unit holders' interest. Investors should understand that derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include but are not limited to the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. There may be a cost attached to selling or buying futures or another derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares. The possible lack of a liquid secondary market for a futures contract or listed option may result in inability to close futures or listed option positions prior to their maturity date.
- b. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable.
- c. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- d. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
- e. An exposure to derivatives can also limit the profits from a genuine investment transaction.
- f. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
- g. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments

e. Risk associated with Securities Lending:

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in which case the securities might go in for auction. In the event of exceptional circumstances resulting

in non-availability of securities in auction, such transactions would be financially closed-out at appropriate rates as per exchange regulations. Besides, there will also be temporary illiquidity of the securities that are lent out and the Scheme(s) will not be able to sell such lent out securities until they are returned.

f. Risks associated with segregated portfolio

Different types of securities in which the scheme would invest carry different levels and types of risk as given in the Scheme Information Document of the scheme. In addition to the same, unitholders are requested to also note the following risks with respect to Segregated Portfolio:

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time there is recovery of money from the issuer.
2. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity, as there may not be active trading of units in the stock market. Further trading price of units on the stock market may be at a significant discount compared to the prevailing NAV.
3. Securities which are part of the segregated portfolio may or may not recover any money, either fully or partially.

g. Risk pertaining to underlying Index

Equities are volatile in nature and are subject to price fluctuations on daily basis. The volatility in the value of the equity instruments is due to various micro and macroeconomic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.

C. Risk mitigation strategies

The scheme aims to track Nifty Smallcap 250 Index as closely as possible before expenses. The index is tracked on a regular basis and changes to the constituents or their weights, if any, are replicated in the underlying portfolio with the purpose of minimizing tracking error.

Investments in equity, debt and money market securities carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants.

For risk control, the following may be noted:

Liquidity Risks:

Stocks in the underlying index are selected by applying liquidity as one of the criteria and hence the portfolio of Nifty Smallcap 250 Index is reasonably liquid. The index is rebalanced based on certain criteria after which certain illiquid stocks are replaced by more liquid stocks. The fund manager makes the changes to the portfolio accordingly. Therefore, liquidity issues in the scheme are not envisaged.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds as well as equities. If interest rates rise the prices of bonds fall and vice versa. Equity might be negatively affected as well in a rising interest rate environment. A well-diversified portfolio may help to mitigate this risk.

II. Information about the scheme:**Where will the scheme invest**

The Scheme will invest in securities which are constituents of Nifty Smallcap 250 Index , Money Market instruments, triparty repo, equity derivatives and units of liquid mutual fund.

Money Market instruments includes Commercial Paper, Commercial Bills, Certificates of Deposit, Treasury Bills, Bills Rediscounting, Triparty Repo, Government securities having an unexpired maturity of less than 1 year, alternate to Call or notice money, Usance Bills and any other such short-term instruments as may be allowed under the Regulations prevailing from time to time.

A brief narration of Money Market Instruments is as under:

1. Certificate of Deposits (CDs) is a negotiable money market instrument issued by scheduled commercial banks and select all- India Financial Institutions that have been permitted by the RBI to raise short term resources.
2. Commercial Paper (CPs) is an unsecured negotiable money market instrument issued in the form of a promissory note, generally issued by the corporates, primary dealers and all India Financial Institutions as an alternative source of short term borrowings. They are issued at a discount to the face value as may be determined by the issuer. CP is traded in secondary market and can be freely bought and sold before maturity.
3. Treasury Bills (T-Bills) are issued by the Government of India to meet their short term borrowing requirements. T-Bills are issued for maturities of 91 days, and 364 days. T-bills are issued at a discount to their face value and redeemed at par.
4. Triparty Repo
5. Securities created and issued by the Central Governments as may be permitted by RBI, securities guaranteed by the Central Governments (including but not limited to coupon bearing bonds, zero coupon bonds and treasury bills). Central Government Securities are sovereign debt obligations of the Government of India with zero-risk of default and issued on its behalf by RBI. They form part of Government's annual borrowing programme and are used to fund the fiscal deficit along with other short term and long term requirements. Such securities could be fixed rate, fixed interest rate with put/call option, zero coupon bond, floating rate bonds, capital indexed bonds, Fixed Interest security with staggered maturity payment etc.

The Fund Manager reserves the right to invest in such instruments and securities as may be permitted from time to time and which are in line with the investment objective of the scheme.

(iv) DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Portfolio Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks), Treasury Bills (issued by RBI) and the triparty repo.

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the G-sec markets and the overnight repo and triparty repo are guaranteed and done by a central counterparty, the Clearing corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on May 08, 2025:

Instruments	Indicative yield range (%)
Overnight rates	5.75-5.80
90 day Commercial Paper	6.70-6.75
91-day T-bill	5.87-5.89
1 year G-Sec	5.85-6.00
5 year G – Sec	6.12-6.17
10 year G-Sec	6.35-6.37
1 year AAA Bond	6.80-6.85
5 year AAA Bond	6.98-7.03

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally, when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.

This ensures that the market value on each date of the transfer rises by a specified amount at every frequency irrespective of the market price. For example if investor decides that the value of their investment in the target scheme should appreciate by Rs. 1000 per month, then each month investor will invest only to the extent of the shortfall. If appreciation in the target scheme is higher than the target value then this excess value is reverse transferred to the source scheme. - Amount of transfer: The first Swing STP installment will be processed for the installment amount specified by the investor at the time of enrollment. From the second Swing STP installment onwards, the transfer amount will be derived by the following formula:

In case on the STP date, the amount (as specified above) to be transferred is not available in the source scheme/plan/option in the investor's folio, the residual amount will be transferred to the target scheme/plan/option and Swing STP will be closed.
