Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) of the Units will be calculated on every Business Day and for such other days as may be required for the purpose for transaction of Units. The NAV shall be calculated in accordance with the following formula, or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of the Scheme's Investments+ Receivables+ Accrued Income+ Other Assets- Accrued Expenses- Payables- Other Liabilities}}{\text{Number of Units Outstanding}}$$

The NAV of the Scheme will be calculated and declared upto Four decimal places & the fourth decimal will be rounded off higher to the next digit if the fifth decimal is or more than 5 i.e., if the NAV is Rs. 10.45347 it will be rounded off to Rs. 10.4534.

Illustration of NAV:

If the net assets of the Scheme, after considering applicable expenses, are Rs.10,45,34,345.34 and units outstanding are 10,00,0000, then the NAV per unit will be computed as follows: 10,45,34,345.34 / 10,00,000 = Rs. 10.4534 per unit (rounded off to four decimals).

The Mutual Fund will ensure that the repurchase price will not be lower than 97% of the Applicable NAV

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI.

B. Risk factors

Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:

a) Scheme Specific Risk Factors

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. Risks Associated with investing in Government Bonds:

Investment in Government securities like all other debt instruments is subject to price and interest rate risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in prices is a function of the existing coupon, days to maturity and the increase or decrease in interest rates. Price-risk is not unique to Government securities but is true for all fixed income securities. Despite a high degree of liquidity in comparison with other debt instruments on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

2. Risks associated with investing in State Development Loans (SDLs):

Market Liquidity risk with fixed rate SDL, even though the SDL market is relatively liquid when compared to other corporate bond instruments, on certain occasions, there could be difficulties in transacting in the market due to extreme volatility leading to constriction in market volumes. Also, the liquidity of the Scheme may suffer in case the relevant guidelines issued by state governments undergo any adverse changes. Interest Rate risk associated with SDL - while SDL generally carry relatively minimal credit risk since they are issued by the respective State Governments, they do carry price risk depending upon the general level of interest rates prevailing from time to time. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates decline, the prices of fixed income securities increase. The extent of fall or rise in the prices is a function of the coupon rate, days to maturity and the increase or decrease in the level of interest rates. The price-risk is, however, not unique to SDL, it exists for all fixed income securities. Therefore, their prices tend to be influenced more by movement in interest rates in the financial system than by changes in the government's credit rating. By contrast, in the case of corporate or institutional fixed income Securities, such as bonds or debentures, prices are influenced by their respective credit standing as well.

3. Risks Associated with investing in Money Market Instruments

- **Interest rate Risk:** Price of a fixed income instrument generally falls when the interest rates move up and vice-versa. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded. The NAV of the Scheme is expected

to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.

- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Credit risk or default Risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity & Settlement Risk:** The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Reinvestment Risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Prepayment Risk:** The Scheme may receive payment of monthly cashflows earlier than scheduled, which may result in reinvestment risk.
- **Market Risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities.
- **Concentration Risk:** The Scheme Portfolio may invest across sectors subject to SEBI prescribed limits applicable from time to time in line with Scheme objective, Investment strategy and applicable regulations.

4. Risk Factors associated with Scheme:

a. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select securities or to take defensive positions in declining markets.

b. Tracking Error Risk:

Tracking Error is divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Based on that the availability of issuances by the CPSEs/CPSUs/CPFIs and other Government organizations, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, the risk parameters of the portfolio of the Scheme and underlying index could be similar.

The Fund will endeavor to keep the tracking error as low as possible.

Tracking error could be the result of a variety of factors including but not limited to:

- Due to investment in out of index investments
- Due to mismatch in the weight of the issuers forming part of the Index and the Scheme.
- Change in asset allocation between the Index and the Scheme in the last year of the Scheme.
- Difference in valuation of underlying bonds by the Index Provider and AMC's valuation providers.

c. Trade Execution Risk on RFQ Platforms:

Current SEBI regulations mandates Mutual Funds to execute certain % of their monthly trading volume in corporate bonds on RFQ platforms. RFQ platforms are peer-to-peer platforms and are still in development stage. Therefore, they have lower level of secondary market liquidity. Mandatory execution of trades on RFQ among MFs may hamper trade execution efficiency during periods of heavy outflows.

5. Risks Associated with exposure in Tri-party Repo

Risk of exposure in the Tri-party Repo settlement Segment provided by CCIL emanates mainly on two counts –

- 1) Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Tri-party Repo transaction.
- 2) Risk of default by a borrower in repayment.

6. Risks Associated with segregated portfolio

- 1) Unit holder holding units of Segregated Portfolio may not able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

For further details please refer SAI.

C. Risk mitigation strategies

The Scheme will invest in PSU Bonds / SDLs which are constituents of the underlying Index viz. CRISIL IBX 50:50 Gilt Plus SDL Index – June 2027. Based on the availability of issuances, it is expected that the portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, broad risk parameters of the portfolio of the Scheme such as credit rating, weighted average YTM, weighted average maturity, asset allocation etc. are expected to be similar to the Underlying Index

The Scheme's exposure to money market instruments will be in line with the asset allocation table.

This allocation will be monitored periodically, and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

Since disciplined investing requires risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The Scheme has a detailed process to identify, measure, monitor and manage various portfolio risks. The objective is to understand these risks and mitigate them wherever possible.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. There is a Board level Risk Management Committee which reviews overall risk management function.

Few of the key risk identified are:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Market/Volatility Risk Risk arising due to price fluctuations and volatility, having material impact on the overall returns of the Scheme.	The Scheme, being a Target Maturity Date index fund structure, is expected to follow a Buy and Hold investment strategy in a passive manner. Based on that, we expect to mitigate intermittent price volatility in the underlying assets. Investors who remain invested until the maturity of the Scheme are expected to mitigate market / volatility risk to large extent.
Credit risk Risk associated with repayment of investment	The Scheme intends to invest in bonds issued by Government & SDLs issued by State governments. These are controlled by the Government of India. SDLs are issued and serviced by the RBI. SDLs are eligible for SLR investments. These bonds are considered safe.
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	The Scheme intends to invest in bonds issued by Government & SDLs issued by State governments. In general, Government Bonds and SDLs enjoy higher level of secondary market liquidity.
Interest rate risk Price volatility due to movement in interest rates	The Scheme being passively managed and a Target Maturity Date index fund structure, is expected to follow a Buy and Hold investment strategy in a passive manner. All investments are within the maturity date of the Scheme and the underlying Index. This should help mitigate the interest rate risk.
Concentration risk Risk arising due to over exposure in few securities	Since the investment are made in sovereign bonds, there is no concentration risk foreseen.
Event risk Price risk due to company or sector specific event	The Scheme intends to Government Bonds and SDLs. These bonds / SDLs are perceived to be relatively safe with quasi sovereign risk due their government ownership.
Performance risk Risk arising due to change in factors affecting the market	The scheme is passively managed
