- Short Term Deposits

The Scheme shall invest in any other instruments as may be permitted by SEBI/RBI from time to time in line with the investment objective of the Scheme.

Kindly refer detailed definitions and applicable regulations/guidelines for each instruments in the Section II.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme follows a passive investment strategy.

Axis Nifty SDL September 2026 Debt Index Fund Maturity is a passively managed index fund which will employ an investment approach designed to track the performance of Nifty SDL Sep 2026 Index . The Scheme will follow Buy and Hold investment strategy in which the Scheme will invest in state government securities, which will be held till maturity unless sold for meeting redemptions/rebalancing.

The Scheme shall replicate the index completely. In case the Scheme is not able to replicate the index the Fund Manager may invest in other issuances within the limits specified and subject to conditions laid down by para 3.6 of SEBI Master Circular for Mutual Funds as amended from time to time.

During normal circumstances, the Scheme's exposure to money market instruments will be in line with the asset allocation table. However, in case of maturity of instruments in the Scheme portfolio, the reinvestment will be in line with the index methodology.

Pursuant to para 3.5.3.9 of SEBI Master Circular for Mutual Funds, as amended by SEBI from time to time the scheme shall be considered to be replicating the underlying index, provided:

In case of Target Maturity Index Funds, the following norms for permissible deviation in duration shall apply:

- a) For portfolio with residual maturity of greater than 5 years: Either +/- 6 months or +/- 10% of duration, whichever is higher.
- b) For a portfolio with residual maturity of up to 5 years: Either +/- 3 months or +/- 10% of duration, whichever is higher.
- c) However, at no point of time, the residual maturity of any security forming part of the portfolio shall be beyond the target maturity date of the Index Fund.

PORTFOLIO TURNOVER

The Scheme is an open-ended scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase the profits which will offset the increase in costs. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

For details pertaining to Risk Controls and Risk Mitigation refer Point no. C Part I of Section II of the Scheme Information Document.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

For details refer Point no. VII – Part I - Section I of the Scheme Information Document.

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit under the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or Fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. Separate NAV will be calculated and disclosed for each Option.

The NAVs will be calculated and disclosed on all the Business Days.

Illustration of Computation of NAV:

The computation of NAV per unit using various components is explained as follows:

Particulars	Amount in Rs
Market or Fair Value of Scheme's Investments (A)	10,00,00,000.00
Add: Current Assets including Accrued Income(B)	75,34,345.00
Less: Current Liabilities and Provisions. (C)	(30,00,000.00)
Net Assets (A+B-C)	10,45,34,345.00

No. of Units outstanding under Scheme on the Valuation Day: 100,00,000

The NAV per unit will be computed as follows: $10,45,34,345.34 / 100,00,000 = \text{Rs. } 10.4534$ per unit (rounded off to four decimals)

The Mutual Fund will ensure that the Redemption Price will not be lower than 95% of the Applicable NAV.

For other details such as policies w.r.t computation of NAV, rounding off, procedure in case of delay in disclosure of NAV etc. refer to SAI

- It is assumed that the expenses charged are evenly distributed throughout the year.
- The expenses of the Direct Plan of the Scheme will be lower to the extent of the distribution expenses/ commission
- Any tax impact has not been considered in the above example, in view of the individual nature of the tax implications. Each investor is advised to seek appropriate advice.

D. LOAD STRUCTURE

Load is an amount which is paid by the Investor to redeem the Units from the Scheme. This amount is used by the AMC to pay commission to the distributors and to take care of other marketing and selling expenses. Load amounts are variable and are subject to change from time to time. For the current applicable structure, investors may refer to the website of the AMC (www.axismf.com) or may call at contact number **8108622211** (Chargeable) from 9.00 am to 6.00 pm (Monday to Saturday) or can contact his distributor.

The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

Section II

I. Introduction

A. Definitions/interpretation

For details refer website of Axis Mutual Fund: <https://www.axismf.com/statutory-disclosures>.

B. Risk factors

Scheme Specific Risk Factors

Risks associated with Passive investments strategy

The Scheme will be a passively managed scheme by providing exposure to constituents of Nifty SDL Sep 2026 Index and tracking its performance and yield, before expenses. The scheme performance may be affected by the vagaries of the Indian markets relating to its underlying Index. The scheme invests in the underlying Index regardless of its investment merit.

Risks associated with investments in Debt & Money Market Instruments

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds, and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio. However, the Scheme shall not invest in unlisted debt instruments including commercial papers, except Government Securities and other money market instruments.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV

Risks associated with Segregated Portfolio

1. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
2. Security comprises of segregated portfolio may not realise any value.
3. Listing of units of segregated portfolio on recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Risks associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

C. Risk mitigation strategies**RISK CONTROL**

The Scheme will be passively managed to track the performance of the Nifty SDL Sep 2026 Index. The Scheme will endeavor to achieve its objective by replicating the index basket

The AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process, which would be periodically evaluated. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has implemented the Bloomberg Portfolio Order Management System as Front Office System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for preemptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

Risk control measures

Market Risk / Interest Rate Risk: Changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. The price movement up and down in fixed income securities will lead to possible movements in the NAV.

Mitigation - In a rising interest rates scenario the scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM).

Mitigation- The scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds.

Credit risk or default risk: It refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.

Mitigation- Apart from the basic examination, management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the Scheme will ensure that these instruments are sufficiently backed by assets.

Tracking error risk: The performance of the Scheme may not commensurate with the performance of the benchmark index on any given day or over any given period. Such variation, referred to as tracking error may impact the performance of the Scheme.

Mitigation: The Investment Manager would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible.

TRACKING ERROR

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as delay in purchase or non-availability of underlying securities forming part of the index, the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. There can be no assurance or guarantee that the Scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index. Tracking Error may arise due to the following reasons:

1. Delay in purchase or non-availability of underlying securities forming part of the index.
2. Delay in liquidation of securities which have been removed by the Index.
3. Difference in valuation of underlying securities by the Index Provider and AMC's valuation providers.
4. Expenditure incurred by the Fund.
5. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise.
6. Securities trading may halt temporarily due to circuit filters.
7. Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc.
8. Rounding-off of the quantity of securities/shares in the underlying index.
9. Interest payout.
10. Index providers undertake a periodical review of the securities/scrips that comprise the underlying index and may either drop or include new securities/scrips.

In such an event, the Fund will try to reallocate its portfolio but the available investment/ reinvestment opportunity may not permit absolute mirroring immediately. SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.

Tracking difference:

- I. Tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.
- II. For the Scheme the annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for the Scheme is higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any.

II. Information about the scheme:

A. Where will the scheme invest –

Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market, consists of G-Sec outstanding of Rs. 81,94,730.225 cr as on May 09, 2022 (State Govt securities - Rs 42,19,393.100 cr, (as on Mar'22) Source: CCIL), is the oldest and the largest component (50% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call
- Tri Party Repo
- Repo/Reverse Repo Agreement
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / DFI / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest on the back of comfort from majority government holding. Highly rated manufacturing companies also command premium on account of limited supply. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields prevailing on March 31, 2025 on some of the instruments and further illustrates this point.

Instrument	Current Yield range (%)
Tri-party Repo	6-6.25
Repo	6-6.25

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

D. Index methodology - Disclosures regarding the index, index eligibility criteria, methodology, index service provider, index constituents, impact cost of the constituents.

About the Index

Nifty SDL Sep 2026 Index seeks to measure the performance of portfolio of 15 State Development Loans (SDLs) maturing during the six month period ending September 30, 2026. The index is computed using the total return methodology including price return and coupon return.

Methodology

- i. Index represents the performance of maturity-targeted SDL market.
- ii. Index holds SDLs issued by states/UTs, maturing during the six month period ending September 30, 2026.

- iii. The index is reviewed at the end of every calendar half year.

The methodology is in compliance with the norms under section headed "Norms for Debt Exchange Traded Funds (ETFs)/Index Funds" announced by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 on May 19, 2023.

Eligibility Criteria

SDL should not be a special security.

State/UT Selection

15 states/UTs are selected based on the highest composite score based on outstanding amount score and liquidity score calculated as on September 30, 2022, for SDLs maturing during the six month period ending September 30, 2026. The composite score is calculated by allocating 30% weight to outstanding amount score and 70% weight to liquidity score. The liquidity score is calculated by allocating 80% weight to aggregate trading value, 10% weight to number of days traded and 10% weight to number of trades of the SDL during the twelve month period ending September 30, 2022.

Security Selection

As on September 30, 2022, for every selected state/UT, SDL based on the highest composite score of outstanding amount score and liquidity score calculated as on September 30, 2022, and having a minimum ISIN level outstanding of Rs. 500 crores maturing during the six month period ending September 30, 2026, is selected to be part of the index. The composite score is calculated by allocating 30% weight to outstanding amount score and 70% weight to liquidity score. The liquidity score is calculated by allocating 80% weight to aggregate trading value, 10% weight to number of days traded and 10% weight to number of trades of the SDL during the twelve month period ending September 30, 2022. In case for any state/UT, securities with such eligibility are not found, such state/UT is not included in the index.

Weight Assignment

- i. Each state/UT that is part of the index is given weight based on a composite score of outstanding amount score and liquidity score calculated as on September 30, 2022, of the respective states/UTs as calculated above under 'state/UT selection'.
- ii. Subsequently, the weights may drift due to price movement and will not get reset.
- iii. Any coupon amount received is assumed to be reinvested in the portfolio on the same date, in the proportion of the existing weights.

Index Rebalancing and Reconstitution

- i. On a semi-annual basis, index will be screened for compliance with the norms under section headed "Norms for Debt Exchange Traded Funds (ETFs)/Index Funds" announced by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD1/P/CIR/2023/74 on May 19, 2023. In case of non-compliance, suitable corrective measures will be taken to ensure compliance with the norms.
- ii. Index will be reviewed at the end of each calendar half-year with data cut-off date being 15 working days (T-15) before last working day of calendar half-year (T). Changes, if any, shall be effective from last working day of calendar half-year.
- iii. During the semi-annual review, SDL based on the highest composite score of outstanding amount score and liquidity score calculated as on the cut-off date and having a minimum ISIN level outstanding of Rs. 500 crores maturing during the six month period ending September 30, 2026, will replace the existing SDL of the same state/UT with the same weight if available, otherwise the existing SDL of that state/UT will continue to be part of the index. The composite score is calculated by allocating 30% weight to outstanding amount score and 70% weight to liquidity score. The liquidity score is calculated by allocating 80% weight to aggregate trading value, 10% weight to number of days traded and 10% weight to number of trades of the SDL during the one month period ending on the data cut-off date.
- iv. The drifted weights of the constituents will not get reset and the existing weights will continue subject to the single issuer limit in compliance with the norms under section headed "Norms for Debt Exchange Traded Funds (ETFs)/Index Funds" announced by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 on May 19, 2023.

- v. As the index includes securities that shall mature during the six month period ending on the final maturity date of the index, any proceeds from the SDL redemption prior to the final maturity date of the index shall be re-invested using the following waterfall approach:
- The proceeds from security redemption will be reinvested in the longest maturity outstanding security issued by the same issuer (SDL in case of state/UT) and maturing on or just before the index maturity date with the same weightage. This will be subject to the single issuer limit in compliance with the norms under section headed "Norms for Debt Exchange Traded Funds (ETFs)/Index Funds" announced by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 on May 19, 2023.
 - In case a replacement in the form of outstanding security of the same issuer cannot be found for reinvestment then the proceeds from such redemption shall be reinvested in the remaining entire portfolio on the same date in the proportion of the existing weights. This will be subject to the single issuer limit in compliance with the norms under section headed "Norms for Debt Exchange Traded Funds (ETFs)/Index Funds" announced by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 on May 19, 2023.
 - In case due to any reason, it is not possible to meet any norms as prescribed by SEBI vide circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2023/74 dated May 19, 2023, then the proceeds from such redemption shall be reinvested in a T-Bill maturing on or just before the index maturity date.
 - If the last outstanding security (including T-Bill) in the index matures before the final index maturity date, all redemption proceeds shall be re-invested in The Clearing Corporation of India Ltd.'s (CCIL) TREPS overnight rate tracked by Nifty 1D Rate Index for any subsequent days till the maturity of the index.

Index Termination

The index shall mature on September 30, 2026. If the index matures on a holiday, the index value will be computed till the prior working day.

Tracking Error & Tracking Difference	<p>TRACKING ERROR</p> <p>The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as delay in purchase or non-availability of underlying securities forming part of the index, the fees and expenses of the Scheme, corporate actions, cash balance, changes to the underlying index and regulatory restrictions, which may result in Tracking Error with the underlying index of the Scheme. The Scheme's returns may therefore deviate from its underlying index. "Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the Scheme. There can be no assurance or guarantee that the Scheme will achieve any particular level of Tracking Error relative to performance of the underlying Index. Tracking Error may arise due to the following reasons:</p> <ol style="list-style-type: none"> 1. Delay in purchase or non-availability of underlying securities forming part of the index. 2. Delay in liquidation of securities which have been removed by the Index. 3. Difference in valuation of underlying securities by the Index Provider and AMC's valuation providers. 4. Expenditure incurred by the Fund. 5. Available funds may not be invested at all times as the Scheme may keep a portion of the funds in cash to meet Redemptions, or corporate actions or otherwise. 6. Securities trading may halt temporarily due to circuit filters. 7. Corporate actions such as debenture or warrant conversion, rights issuances, mergers, change in constituents etc. 8. Rounding-off of the quantity of securities/shares in the underlying index. 9. Interest payout. 10. Index providers undertake a periodical review of the securities/scripts that comprise the underlying index and may either drop or include new securities/scripts. <p>In such an event, the Fund will try to reallocate its portfolio but the available investment/ reinvestment opportunity may not permit absolute mirroring immediately. SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.</p> <p><u>Tracking difference:</u></p> <ol style="list-style-type: none"> I. Tracking difference i.e. the annualized difference of daily returns between the index and the NAV of the Scheme shall be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.
