IV. Flexi Systematic Transfer Investment Plan (Flexi STRIP) facility (Available as Destination Scheme and Source Scheme)

The facility of Flexi STRIP is introduced from Dec 18, 2019 wherein the unit holder(s) can opt to transfer an amount at regular intervals from a designated open-ended Scheme of UTI Mutual Fund (“Transferor Scheme”) herein after referred to as **Source Scheme** to the Growth Option of a designated, open-ended Scheme of UTI Mutual Fund (“Transferee Scheme”) hereinafter referred to as **Destination Scheme**.

- (a) **Available Mode:** The Flexi STRIP Facility is available only for units held / to be held in Non-Demat Mode in the Source and the Destination Scheme.
- (b) **Available Schemes:** The Flexi STRIP will be available in all source schemes and for the destination schemes in which the Regular STRIP is allowed.
- (c) **Limitation on Destination Scheme:** Only one Flexi STRIP registration per destination scheme in a folio would be allowed. Though multiple Flexi STRIPs and / or Normal STRIPs are allowed in source schemes, only one Flexi STRIP or Normal STRIP will be allowed in the destination scheme.
- (d) **Frequencies Available** are Daily, Weekly, Monthly and Quarterly intervals.
- (e) **Date of transfer:**

Unitholders will be eligible to transfer a fixed amount on daily basis i.e. on every business day under Daily periodicity; on any pre-specified date under Weekly periodicity; Monthly periodicity and of the first month of each quarter, under Quarterly periodicity. If that day being a holiday, next business day would be considered for the transaction.

However, if in any month, the Flexi STRIP date opted by the Investor is not available (Say, 29th & 30th in February and 31st in case of alternate months), then the Flexi STRIP for those dates shall be processed for the last available Business Day in that month.

- (f) **Target Investment Value:** In Flexi STRIP, transfers into the Destination Scheme from the Source Scheme are made to achieve the Total Target Investment Value in the Destination Scheme. The amount to be transferred will be arrived at on the basis of difference between the Target Investment Value and the Actual Market Value of the holdings in the Destination Scheme on the date of transfer.
- (g) **First Flexi STRIP Instalment:** The first Flexi STRIP instalment will be processed for the instalment amount specified by the Unit holder at the time of enrollment. From the second instalment, Flexi STRIP instalment will be higher of the instalment amount or the amount as derived by the formula stated below: $[(\text{Instalment amount}) \times (\text{Number of instalments including the current instalment})] - (\text{Market Value of the investments through FLEXI STRIP in the Destination Scheme on the date of transfer})$
- (h) **Total Amount Invested:** The total amount invested through Flexi STRIP over its tenure in the Destination Scheme, may be higher or lower than the Total Target Investment Value of the investment i.e. the $[(\text{Instalment amount}) \times (\text{total number of instalments specified by the Unit holder})]$. This may be on account of fluctuations in the market value of the Destination Scheme. If Unit Holder decides to take up this facility, then he/she should be aware of the possibility, that the total amount invested through FLEXI STRIP could be higher or lower than the Total Target Investment Value of the investment.
- (i) **Minimum Amount, Frequency and Number of STRIPS:** The minimum amount per Flexi STRIP instalment amount and number of STRIPs at the time of registration shall be as follows:

Frequency	Minimum Amount per Instalment	Minimum Number of Instalments
Daily	Rs. 100 and in multiples of Re.1	20
Weekly & Monthly	Rs. 1000 and in multiples of Re.1	6
Quarterly	Rs. 3000 and in multiples of Re.1	2

- (k) **Minimum Investment Amount for STRIP Activation:** Minimum amount of investment in case of new investment / Unit value in case of existing investment in the source scheme for registration of Flexi STRIP is Rs. 12,000/-

- (n) **Exit Load:** The transfer under the Flexi STRIP from the Source Scheme to the Destination Scheme will take effect by redeeming units of Source Scheme / Plan / Option at the Applicable NAV, after payment of Exit Load & TDS (In case of NRIs), if any, and subscribing to the units of the Destination Scheme at Applicable NAV.
- (o) **Termination of Flexi STRIP:** Flexi STRIP will be terminated in case any of the below reasons are met.

Portfolio Rebalancing:

As per provision no. 2.9.1 to 2.9.5 of para 2.9 under Chapter 2 of SEBI Master Circular for Mutual Funds, states that in the event of deviation from mandated asset allocation mentioned in the Scheme Information Document (SID) due to passive breaches (occurrence of instances not arising out of omission and commission

of AMCs) rebalancing period is 30 business days for the scheme. In case the portfolio of the scheme is not rebalanced within 30 business days, justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period. In case the portfolio of the scheme is not rebalanced within the aforementioned mandated plus extended timelines, the AMCs shall i. not launch any new scheme till the time the portfolio is rebalanced ii. Not to levy exit load, if any, on the investors exiting such scheme.

Reporting and Disclosure Requirements: i. AMCs to report the deviation to Trustees at each stage. ii. In case the AUM of deviated portfolio is more than 10% of the AUM of main portfolio of scheme: 1. The scheme wise deviation of the portfolio (beyond the limit specified) from the mandated asset allocation beyond 30 business days shall also be disclosed on the website of UTI AMC.

Use of Interest Rate Futures (IRFs)

Additionally, in terms of provision no.12.25.9 of para 12.25 under chapter 12 of SEBI Master Circular for Mutual Funds, on ‘Review of norms for participation in derivatives by Mutual Funds’, it is proposed to introduce an enabling clause in SID for use of Interest Rate Futures (IRFs) for imperfect hedging against interest rate volatility by the scheme, subject to applicable investment limits. Some of the key points of circular are as follow:

- (a) To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price} / \text{Par Value})$$
- (b) At no point of time, the net modified duration of part of the portfolio being hedged shall be negative.
- (c) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (d) Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to certain conditions such as exposure to IRFs is created only for hedging, the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

Investment in Repo in Corporate Debt Securities

Gross Exposure Norms:

- (i) The gross exposure of any scheme to ‘corporate bonds repo transactions’ shall not be more than 10% of the net assets of the concerned scheme.
- (ii) The cumulative gross exposure through ‘corporate bonds repo transactions’ along with debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- (iii) For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits.

The investments made by the scheme will be in accordance with the investment policies approved by the Board

The AMC may create segregated portfolio in case of a credit event in respect of debt and money market instruments at issuer level i.e., downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA). (subject to guideline specified by SEBI which may change from time to time).

The creation of segregated portfolio shall be optional and at the discretion of UTI AMC.

B. WHERE WILL THE SCHEME INVEST?

The scheme will invest in Debt & Money Market Instruments such that the Macaulay duration of the portfolio is greater than 7 years.

b. Portfolio Turnover policy:

The scheme being an open-ended scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager these opportunities can be utilized to enhance the total return of the portfolio. The fund manager would endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost and overall scheme objective. The scheme has no specific target relating to portfolio turnover.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Nifty Long Duration Debt Index A-III is the benchmark

UTI AMC reserves the right to change the benchmark in future if a benchmark better suited to the investment objective of the scheme is available.

The performance will be benchmarked to the Total Returns Variant of the Index.

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

- (a) The Net Asset Value (NAV) of the scheme shall be calculated by determining the value of the scheme's assets and subtracting therefrom the liabilities of the scheme taking into consideration the accruals and provisions. NAV shall be declared separately for the different Plans and Options of the scheme.
- (b) The NAV per unit of the scheme shall be calculated by dividing the NAV of the scheme by the total number of units issued and outstanding on the date of calculation under the scheme. The NAV shall be rounded off upto four decimal places for the scheme.

NAV of the Units under the Scheme shall be calculated as shown below:-

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto three decimal places or such other formula as may be prescribed by SEBI from time to time.

Methodology for Calculation of Sale and Re-purchase price of the units of mutual fund scheme

a) In case of Purchase of mutual fund units

As per existing regulation, no entry load is charged with respect to applications for purchase / additional purchase of mutual fund units. Therefore, Computation of Sale Price is as below:

NAV	10.00
Entry Load	Not Applicable
Sale Price	10.00

This also means, Sale Price = NAV as on date of investment

b) Redemption/ Repurchase of mutual fund units

In case of redemption, repurchase price is calculated as below

Repurchase Price = NAV as on date of redemption - exit load (if applicable)

c) Illustration showing how repurchase price is calculated

Amount Invested- Rs.10,000/-

NAV as on date of investment- Rs.10/- per unit

Exit load – Nil

No of units allotted at the time of purchase Amount invested

$$= \frac{\text{NAV of the scheme on the date of investment}}$$

$$= 10,000 / 10 = 1000 \text{ units}$$

Particulars	Redemption in case of Nil Exit load
NAV as on date of redemption	Rs.12
Applicable Exit load	Nil
Repurchase Price (NAV as on date of redemption-Exit load)	Rs.12- (Nil)
Repurchase Price on date of Redemption	Rs.12
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.12 x 1000
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.12,000/-

Note - This is only for illustration purpose. Actual Exit load charged in the Scheme may vary.
The above mentioned example does not take into consideration any applicable statutory levies and taxes.

- (c) A valuation day is a day other than (i) Saturday and Sunday (ii) a day on which both the stock exchanges (BSE and NSE) and the banks in Mumbai are closed (iii) A day on which the purchase and redemption of units is suspended. If any business day in UTI AMC, Mumbai is not a valuation day as defined above then the NAV will be calculated on the next valuation day and the same will be applicable for the previous business day's transactions including all intervening holidays.
- (d) The Mutual Fund shall declare the Net asset value separately for both the Plans by 11 p.m. on every business day on the website of UTI Mutual Fund, www.utimf.com and on AMFI's website www.amfiindia.com. The Mutual Fund shall prominently disclose the NAVs of the scheme under a separate head on the website and on the website of Association of Mutual Funds in India (AMFI). Further, the Mutual Fund will extend facility of sending latest available NAVs to unit holders through SMS, upon receiving a specific request in this regard.

'In case NAV of Corporate Debt Market Development Fund ('CDMDF') units is not available by 9:30 p.m. of same Business Day, NAV declaration timing for Mutual Fund Schemes holding units of CDMDF shall be 10 a.m. on next business day instead of 11 p.m. on same Business Day.'

SECTION II

I. Introduction

- A. Definitions/Interpretation** – is available under the following link on the website of UTI Mutual Fund – <https://www.utimf.com/downloads/data-related-to-sid>

B. Risk Factors

Standard Risk Factors

1. Investment in Mutual Fund scheme units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the Scheme invests fluctuate, the value of your investment in the Scheme may go up or down.
3. Past performance of the Sponsors / AMC / Mutual Fund does not guarantee future performance of the Scheme.
4. UTI Long Duration Fund is only the name of the scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs.10,000/- made by them towards setting up the Fund.
6. **The present Scheme is not a guaranteed or assured return Scheme.**
7. Statements / Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, IDCW and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market, in particular, level of interest rates, various markets related factors and trading volumes, settlement periods and transfer procedures.
10. The Scheme is not guaranteeing or assuring any IDCW. The Scheme is also not assuring that it will make periodical IDCWs, though it has every intention of doing so. All IDCWs are subject to the availability of distributable surplus of the Scheme.
11. The Scheme may invest in units/securities issued by overseas companies listed on recognized stock exchanges overseas and other securities in accordance with the provisions no. 12.19.1 para 12.19 under Chapter 12 of SEBI Master Circular for Mutual Funds subject to a maximum of US\$ 1 billion per mutual fund. However, in case the overall industry limit of US\$ 7 billion or such other limit as prescribed by SEBI has been breached, the Scheme would temporarily not invest in the overseas securities.

Scheme Specific Risk Factors

12. Risk factors associated with investing in Fixed Income Securities

- (a) Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Investments in corporate debt carry a higher level of risk than investments in Government securities. Further even among corporate debt, AAA/P1+ rated instruments are comparatively less risky than AA/P1 rated instruments. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern.
- (b) The Net Asset Value (NAV) of the Scheme will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- (c) Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.

- (d) As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- (e) Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the Schemes may not obtain any return on its investment.
- (f) Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- (g) While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
- (h) Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
- (i) As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under 'Right to Limit Redemptions' in Section 'Special Considerations', if any, on the right to freely retain or dispose of units being offered'.
- (j) At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme.
- (k) The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
- (l) **Prepayment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- (m) **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
- (n) Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
- (o) Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

13. Risk factors associated with investing in Foreign Securities:

Currency Risk:

Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

Interest Rate Risk:

The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stands exposed to their interest rate cycles.

Credit Risk:

Investment in Foreign Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

Country Risk:

The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

14. Risk factors associated with investing in Derivatives

- (a) The AMC, on behalf of the Scheme may use various derivative products, from time to time, in an attempt to protect the value of the portfolio and enhance Unit holders' interest. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Other risks include, the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- (b) Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- (c) The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
- (d) **Credit Risk:** The credit risk in derivative transaction is the risk that the counter party will default on its obligations and is generally low, as there is no exchange of principal amounts in a derivative transaction.
- (e) **Illiquidity risk:** This is the risk that a derivative cannot be sold or purchased quickly enough at a fair price, due to lack of liquidity in the market.

15. Risk factors associated with investing in Securitised Debt

Securitization – Features & Investment Strategy

Asset Securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. A typical process of asset securitization involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments (e.g., promissory notes, pass through certificates or other debt instruments) to investors, such instruments evidencing the beneficial ownership of the investors in the Receivables. The financial instruments are rated by an independent credit rating agency. An Investor's Agent is normally appointed for providing trusteeship services for the transaction.

The Fund will predominantly invest only in those Securitised issuances, which have AAA rating indicating the highest level of safety from credit risk point of view at the time of making an investment.

Generally available Asset Classes for Securitization in India

- Commercial Vehicles
- Auto and Two wheeler pools
- Mortgage pools (residential housing loans)
- Personal Loan, credit card and other retail loans
- Corporate loans/receivables

The fund may invest in various type of Securitized issuances as mentioned above, including but not limited to Asset Backed Securitization, Mortgage Backed Securitization, Personal Loan Backed Securitization, Collateralized Loan Obligation/ Collateralized Bond Obligation and so on.

Risk Factors specific to investments in Securitized Papers:

Types of Securitized Debt vary and carry different levels and types of risks. Credit Risk on Securitized Bonds depends upon the Originator and varies depending on whether they are issued with Recourse to Originator or otherwise. A structure with Recourse will have a lower Credit Risk than a structure without Recourse. Underlying assets in Securitized Debt may assume different forms and the general types of receivables include Auto Finance, Credit Cards, Home Loans or any such receipts, Credit risks relating to these types of receivables depend upon various factors including macro economic factors of these industries and economies. Specific factors like nature and adequacy of property mortgaged against these borrowings, nature of loan agreement/ mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loans, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower influence the risks relating to the asset borrowings underlying the securitized debt.

Holders of the securitized assets may have low credit risk with diversified retail base on underlying assets especially when securitized assets are created by high credit rated tranches, risk profiles of Planned Amortization Class tranches (PAC), Principal Only Class Tranches (PO) and Interest Only class tranches (IO) will differ depending upon the interest rate movement and speed of prepayment. Various types of major Risks pertaining to Securitized Paper are as below:

Liquidity & Price / Interest risk

Presently, secondary market for securitized papers is not very liquid. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure. The price risk of the instruments will be in line with the maturity/duration of such instruments. Domestic Securitized debt can have different underlying assets and these assets have different risk characteristics. These may be as given in the following example: Security 1-Backed by receivables of personal loans originated by XYZ Bank Specific Risk Factors: Loss due to default and/or payment delay on Receivables, Premature Termination of Facility Agreements, Limited loss cover, Delinquency and Credit Risk, Limited Liquidity and Price Risk, Originator/Collection Agent Risk, Bankruptcy of the Originator, Co-mingling of funds. Security2 - Senior Series Pass Through Certificates backed by commercial vehicles and two-wheeler loan and loan receivables from ABC Bank Limited.

Delinquency and Credit Risk

Securitized transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the Seller or the originator, or the parent or any Associate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the underlying Asset. However many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Prepayment Risk

Asset Securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. Full prepayment of underlying loan contract may occur during the tenure of the paper. In the event of prepayments, investors may be exposed to changes in tenor and reinvestment risk.

Disclosures regarding investments in Securitized Debt:
a. How the risk profile of securitized debt fits into the risk appetite of the scheme?

Investment in these instruments will help the fund earn higher interest accrual and cash flows at regular intervals which would complement the fund's overall positioning. These returns come with a certain degree of risks namely credit and liquidity. Moreover the medium risk profile of the securitized debt instruments matches that of the prospective investors of the fund and hence can be considered in the fund universe.

We invest in Securitized issuances with minimum credit rating of A1+ (in Short Term)/AAA to AA (in Long Term) indicating the high level of safety in credit risk at the time of making any investment.

b. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.

Track record: We ensure that there is adequate past track record of the Originator before selection of the pool including a detailed look at the number of issuances in past, track record of issuances, experience of issuance team, etc.

Willingness to pay: As the securitized structure has underlying collateral structure, depending on the asset class, historical NPA trend and other pool / loan characteristics, a credit enhancement in the form of cash collateral, such as fixed deposit, bank guarantee etc. is obtained, as a risk mitigation measure.

Ability to pay: This assessment is based on a strategic framework for credit analysis, which entails a financial risk assessment.

c. Risk mitigation strategies for investments with each kind of originator

Careful selection of pool based on criteria such as –

- (i) Minimum seasoning of 3-6 months on overall basis higher for risky asset classes.
- (ii) Very low overdue status and a modest repayment track record.
- (iii) Loan to Value and tenure distribution should be at reasonable levels.
- (iv) Adequate regional diversity.

- (v) **Credit Enhancement** is provided to an SPV to cover the losses associated with the pool of assets. It may be divided into First Loss facility and Second Loss facility.

- **First loss facility** represents the first level of financial support to a SPV as part of the process in bringing the securities issued by the SPV to investment grade. The provider of the facility bears the bulk (or all) of the risks associated with the assets held by the SPV.
- **Second loss facility** represents a credit enhancement providing a second (or subsequent) tier of protection to an SPV against potential losses.

- (vi) **Liquidity Facility** is provided to assure investors of timely payments. These include smoothening of timing differences between payment of interest and principal on pool of assets and payments due to investors.

- (vii) **Collateral risk analysis:** Projecting the likely performance of the pool being securitized, based on qualitative and quantitative analysis of various factors past performance of the overall loan portfolio of the Originator, experience of other Originators in the same asset class, lending / collection norms and systems employed by the Originator, the specific composition of the selected pool, outlook on the asset class, as well as the expected overall economic conditions.

d. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Characteristics / Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs
Approximate Average maturity (in Months)	36-120 months	12- 60 months	12-60 months	15-48 months	15-80 weeks	5 months - 3 years	6 months - 5 years

Average Loan to Value Ratio	75%-95%	80%-98%	75%-95%	70%-95%	Unsecured	Unsecured	N.A.
Average seasoning of the Pool	5-6 months	5-6 months	5-6 months	3-6 months	2-7 weeks	3-6 months	N.A.

Average single exposure range %	3-4%	3-4%	2-3%	2-3%	2-3%	2-3%	3-4%

e. **Minimum retention period of the debt by originator prior to securitization**

Minimum retention period for the ABS/MBS pool would be 3-6 months depending on the asset type as mentioned in the above table.

f. **Minimum retention percentage by originator of debts to be securitized**

Minimum retention percentage by originator would vary from originator to originator and by asset class by asset class and would also depend on the timing of origination. However we would require originators minimum skin in the game of 5%.

g. **The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund**

Investments in these papers would be only post independent credit opinions from credit analysts towards such ABS/MBS exposure which would aid in mitigation conflict of interests.

h. **In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt**

Every ABS/MBS exposure would be tracked by credit analysts with relevant research expertise. Monitoring investment in these securitized debts would be through monthly surveillance of the ABS/MBS pool performance and periodic interaction with rating agencies regarding the trends in collection efficiencies and prepayment rates.

16. Risk factors associated with Securities Lending

Securities Lending: It is one of the means of earning additional income for the scheme with a lesser degree of risk. Securities lending is lending of Securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent Securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the Securities borrowed. As per provision no. 12.11.1 of para 12.11 under Chapter 12 of SEBI Master Circular for Mutual Funds, "The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs)."

The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.

17. Risk factors associated with processing of transaction through Stock Exchange Mechanism

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

18. Risk factors associated with investment in Tri-Party Repo on Government Securities or treasury bill

The mutual fund is a member of securities segment and Triparty Repo on Government Securities or treasury bill trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo on Government Securities or treasury bill trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL).

As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo on Government Securities or treasury bill trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

19. Risks associated with investment in units of mutual fund:

Investment in Mutual Fund Units involves investment risks, including but not limited to risks such as liquidity risk, volatility risk, default risk including the possible loss of principal.

Liquidity risk – The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees may limit redemptions (including suspending redemptions) under certain circumstances as specified under the Scheme Information Document.

Volatility risks: There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification across companies and sectors within PSUs.

Default risk - Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.

20. Risk Factors associated with schemes investing in Gilt Securities

- a. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in prices is a function of the existing coupon, days to maturity and the increase or decrease in interest rates. Price-risk is not unique to government securities but is true for all fixed income securities. The default risk however, in respect of Government securities is zero. Therefore, their prices are influenced only by movement in interest rates in the financial system. On the other hand, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced by credit standing of the issuer as well as the general level of interest rates.
- b. Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

21. Debt and Money Market securities investments under the scheme will also be subject to the following risks:

- a. **Interest Rate Risk / Reinvestment Risk:** Scheme would manage the interest rate risk & reinvestment risk by adequately matching the duration of assets in line with the duration of the scheme.
- b. **Credit Risk:** Scheme would predominantly invest in highly rated securities where there is an internal credit comfort which would reduce the probability of credit risk.
- c. **Concentration Risk:** The scheme would have modest presence of issuers with reasonable limits which would mitigate the credit concentration risk.

- d. **Portfolio Risk:** *By monitoring the return deviation and adequately managing all the above risks namely interest rate risk, reinvestment risk & credit cum concentration risk the scheme would mitigate the overall portfolio risk.*

22. Risk factors associated with Creation of Segregated Portfolio –

- a. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- b. Security comprises of segregated portfolio may not realise any value.
- c. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

23. Backstop facility in form of investment in Corporate Debt Market Development Fund (CDMDF):

CDMDF is set up as a scheme of the Trust registered as an Alternative Investment Fund ('AIF') in accordance with the SEBI (Alternative Investment Funds) Regulations, 2012 ("AIF Regulations"). The objective of the CDMDF is to help to develop the corporate debt market by providing backstop facility to instill confidence amongst the market participants in the corporate debt/bond market during times of market dislocation and to enhance the secondary market liquidity. In times of market dislocation, CDMDF shall purchase and hold eligible corporate debt securities from the participating investors (i.e., specified debt-oriented MF schemes to begin with) and sell as markets recover. The CDMDF will thus act as a key enabler for facilitating liquidity in the corporate debt market and to respond quickly in times of market dislocation. The trigger and period for which the backstop facility will be open shall be as decided by SEBI. Thus this backstop facility will help fund managers of the aforementioned Schemes to better generate liquidity during market dislocation to help the schemes fulfill liquidity obligations under stress situation.

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/129 dated July 27, 2023 on Investment by Mutual Fund Schemes in units of Corporate Debt Market Development Fund, the aforementioned schemes shall invest 25 bps of its AUM as on December 31, 2022 in the units of the Corporate Debt Market Development Fund ('CDMDF'). An incremental contribution to CDMDF shall be made every six months (i.e. at the end of half year ended June and December) at the prevalent NAV of the respective Class Units to ensure 25 bps of scheme AUM is invested in units of CDMDF. However, if AUM decreases there shall be no return or redemption from CDMDF. Contribution made to CDMDF, including the appreciations on the same, if any, shall be locked-in till winding up of the CDMDF.

Investments in CDMDF units shall not be considered as violation while considering maturity restriction as applicable for various purposes (including applicable Investment limits) and the calculations of Potential Risk Class (PRC) Matrix, Risk-o-meter, Stress testing and Duration for various purposes shall be done after excluding investments in units of CDMDF.

24. Risk factors associated with Structured Obligations –

- a. There may be liquidity risk, since the market for structured products is not very deep.
- b. Structured obligations such as corporate / promoter guarantee: Securities which have a structure with a guarantee from the corporate / promoter, may see an adverse effect if there are any signs of stress at the promoter / group level, even though the standalone borrowing entity's debt servicing capability and repayments may not see any material impact, from a future cash flow perspective.

25. Risk Management framework to mitigate liquidity risk is summarised as below:

Diversified portfolio – The portfolio held is well diversified in terms of issuer, group and sector, in line with regulatory guidelines and internal Risk Metrics.

Potential Risk Class – Defines to maximum potential risk a fund may take based on the credit rating and duration of the debt securities

Liquid assets – Based on the profile of the investors and concentration of distributors, the following type of liquid assets are maintained to address potential Liquidity requirement over a 30-day period.

- (a) Liquid assets to address 95 percentile Redemption at Risk (maintained in the form of Cash, Government Securities, T-bills and Repo on Government Securities)
- (b) Liquid assets to address 95 percentile Conditional Redemption at Risk (maintained in the form of above assets and highest rated debt securities)

Asset Liability Management – ALM to address potential Liquidity requirement over a 90-day period, based on the putative liabilities vis-à-vis secondary market liquidity of the portfolio.

Borrowing – A fund may borrow up to 20% of AUM (or such higher limits as may be allowed by the regulator from time to time) to meet redemption requirements.

Stress testing – Stress Testing is an exercise to simulate adverse scenario on our portfolio based on the past events, and assess the impact such event on the portfolio. This helps in raising timely alerts to take necessary action to address the situation.

Swing Pricing – The swing pricing framework ensures that the impact cost of high redemption is passed on the investors exiting the scheme, while incoming investors in such time benefit due to lower NAV.

26. Participation in Repo in Corporate Debt Securities

In accordance with Para 12.18 of SEBI Master Circular on Mutual Funds read along with SEBI Circular no. SEBI/HO/IMD/POD-2/CIR/P /2023/0085 dated June 8, 2023 and SEBI Circular no. SEBI/HO/ IMD/IMD PoD-2/P/CIR/2023/87 dated June 13, 2023 on ‘Participation of mutual funds in repo in corporate debt securities’, the Scheme may participate in repo transactions in Corporate Debt Securities, within the following overall framework, as per the guidelines of Securities and Exchange Board of India and Boards of UTI Trustee Company Private Limited & UTI Asset Management Company Limited:

(A) Eligibility

The scheme can participate in repos on following corporate debt securities:

- Listed AA and above rated corporate debt securities
- Commercial Papers (CPs) and Certificate of Deposits (CDs)

For the purpose of consideration of credit rating of exposure on repo transactions for various purposes including for Potential Risk Class (PRC) matrix, liquidity ratios, Risk-o-meter etc., the same shall be as that of the underlying securities, i.e., on a look through basis.

(B) Gross Exposure Norms

(i) The gross exposure of any scheme to ‘corporate bonds repo transactions’ shall not be more than 10% of the net assets of the concerned scheme.

(ii) The cumulative gross exposure through ‘corporate bonds repo transactions’ along with equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.

(iii) For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits.

(C) Category of the counter-party to be considered for making investment

All entities eligible for transaction in corporate debt repos, as defined by Reserve Bank of India (RBI) and SEBI, shall be considered for repo transactions.

(D) Credit Rating of Counterparty to be considered for making investment

The scheme shall carry out repo transactions with only those counterparties, who have a credit rating of ‘AA-and above’ (Long term rating) or ‘A1+’ (Short term rating).

(E) Tenor of Repo

As a repo seller, the scheme can borrow for a period not more than six months as per the existing Regulation 44(2) of the SEBI (Mutual Funds) Regulations, 1996.

As a repo buyer, the scheme can lend for a maximum period of one year, subject to provision/s of the Scheme Information Document (SID).

(F) Tenor and Credit Rating of the Collateral

The scheme shall participate in repo transactions in Corporate ‘Bonds rated ‘AA’ and above (‘A1+’ in respect of money market instruments).

The tenor of the collateral shall not be more than 10 years.

(G) Minimum Haircut

In terms of RBI guidelines, repo transactions shall be subject to the following minimum haircuts:-

Rating of the Security AAA AA+ AA

Minimum Haircut 7.50% 8.50% 10%

The above are minimum stipulated haircuts where the repo period is overnight or where the re-margining frequency (in case of longer tenor repos) is daily. In all other cases, Fund Manager may adopt appropriate higher haircuts.

Depending on the market conditions and risk perceptions, the Fund Manager may seek higher haircut (while lending) or give a higher haircut (while borrowing).

(H) Risk factors and mitigation measures

(i) Illiquidity Risk

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties.

Therefore, to mitigate such risks, it has been stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

(ii) Counter-party Risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the scheme shall carry out repo transactions with only those counterparties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counterparty. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers.

Similarly, in the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

(iii) Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security ('AA' for long-term instruments / A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

27. Participation in Derivative Products

The Scheme may take derivatives position based on the opportunities available subject to the guidelines provided by SEBI from time to time and in line with the overall investment objective of the Scheme. The Scheme will comply with the prescribed disclosure requirements. Derivative Positions may be taken to hedge the portfolio, rebalance the same or to undertake any other strategy as permitted under SEBI (MF) Regulations from time to time. Hedging does not mean maximisation of returns but only reduction of systematic or market risk inherent in the investment.

Derivatives:

A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, index, interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Derivatives are further classified into

- Futures
- Options
- Interest Rate Swaps
- Forward Rate Agreements

Futures:

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Options:

An option is a derivative instrument which gives its holder (buyer) the right but not the obligation to buy or sell the underlying security at the contracted price on or before the specified date. The purchase of an option requires an up-front payment (premium) to the seller of the option.

There are two basic types of options, call option and put option.

(a) Call option:

A call option gives the buyer of the option the right but not the obligation to buy a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

(b) Put option:

A put option gives the buyer of the option the right but not the obligation to sell a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

On expiry of a call option, if the market price of the underlying asset is lower than the strike price the call would expire unexercised. Likewise, if, on the expiry of a put option, the market price of the underlying asset is higher than that of the strike price the put option will expire unexercised.

The buyer/holder of an option can make loss of not more than the option premium paid to the seller/writer but the possible gain is unlimited. On the other hand, the option seller/writer's maximum gain is limited to the option premium charged by him from the buyer/ holder but can make unlimited loss.

Interest Rate Swaps:

All swaps are financial contracts, which involve exchange (swap) of a set of payments owned by one party for another set of payments owned by another party, usually through an intermediary (market maker). An IRS can be defined as a contract between two parties (Counter Parties) to exchange, on particular dates in the future, one series of cash flows, (fixed interest) for another series of cashflows (variable or floating interest) in the same currency and on the same principal for an agreed period of time. The exchange of cashflows need not occur on the same date. It may be noted that in such hedged positions (fixed v/s floating or vice versa), both legs of the transactions have interest rate volatility as underlying. Debt derivatives are as of now customised over the counter products and there is no guarantee that these products will be available on tap. The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme's to undertake trading on a day to day basis.

Forward Rate Agreement (FRA):

A FRA is an agreement between two counter parties to pay or to receive the difference between an agreed fixed rate (the FRA rate) and the interest rate prevailing on a stipulated future date, based on a notional amount, for an agreed period. In short, in a FRA, interest rate is fixed now for a future period. The special feature of FRAs is that the only payment is the difference between the FRA rate and the Reference rate and hence are single settlement contracts. As in the case of IRS, notional amounts are not exchanged.

28. Participation in Interest Rate Futures (IRFs)

a) Investment Norms:

To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio}) / (\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR value})$$

At no point of time, the net modified duration of part of the portfolio being hedged should be negative.

In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject certain conditions such as exposure to IRFs is created only for hedging the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

b) Risks associated with imperfect hedging:

With imperfect hedging, there is a risk that offsetting investments in a hedging strategy will not experience price changes in entirely same direction from each other. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.

For example, in the attempt to hedge interest rate risk of a scheme (diversified portfolio of various debt securities) with a modified duration of say 6 years, the fund manager takes a short position in 10 yr IRF having a modified duration of 6 years. The risk is that price changes in IRF and the scheme portfolio may not move in the same direction or in the same proportion.

Numerical Example:

To understand risk associated with imperfect hedging let us look at the following illustration:

On Nov 1, 2021 the fund buys Rs. 100 Crs of 10 year Power Finance Co. (corporate bond) with a modified duration of 6 years from the spot market at a yield of 7.50% (Price: Rs. 100). Subsequently, it is anticipated that the interest rate will rise in the near future. Therefore, to hedge the exposure in underlying corporate bond, the fund sells Nov 2021, 10 year benchmark Interest Rate Futures at yield of 7.00% (Price: Rs. 98.50) having a modified duration of 6 years.

Let us assume the following two scenarios:

(i) Both the securities experience price changes in the same direction:

On Nov 15, 2021 the corporate bond and government bond yields move up by 10 basis points (0.10%) on back of deteriorating macro-economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest Rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Profit on short selling of Interest Rate Futures = Rs. 100 Crs * 0.10% * 6 = Rs. 60 Lacs

This allows the fund manager to hedge the portfolio against interest rate movement using Interest Rate Futures.

(ii) Securities experience price changes in the opposite direction:

On Nov 15, 2021 the corporate bond yield moves up by 10 basis points (0.10%) on back of higher supply of corporate bonds & the government bond yield fell by 5 bps due to improving macro-economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Loss on short selling of Interest Rate Futures = Rs. 100 Crs * 0.05% * 6 = (Rs. 30 Lacs)

On certain instances like the one illustrated above, it is observed that the co-relation between the corporate bonds and government securities may not be perfect over a short period of time leading to imperfect hedging which may result in higher loss/ gain from the strategy. The likelihood of such instances being prevalent on a sustainable basis is expected to be minimal due to strong correlation between government securities & bond markets over the medium to long term.

29. Participation in Foreign Securities

The scheme may seek investment opportunities in the ADRs/ GDRs/ Foreign securities subject to the Regulations. Such investments shall not exceed 25% of the net assets of the scheme.

Pursuant to provision no.12.19 under chapter 12 of SEBI Master Circular for Mutual Funds, as may be amended from time to time, the scheme may invest up to US \$25 million in overseas securities

The Scheme may invest in various types of foreign securities including, but not limited to, any of the following:

- i. Foreign debt securities (non-convertible) in the countries with fully convertible currencies

- iii. Overseas Money market instruments rated not below investment grade

- iv. Overseas derivatives traded on recognized stock exchanges overseas (currently permitted only for hedging and portfolio balancing with underlying securities).

The scheme may invest in derivatives to engage in permitted currency hedging transactions with an intention to reduce exchange rate fluctuations between the currency of the scheme (INR) and the foreign currency exposure.

It is to be noted that as per the above-mentioned SEBI Circulars, the aggregate ceiling for overseas investments is US \$7 billion. Within the overall limit of US \$7 billion, mutual funds can make overseas investments subject to a maximum of US \$1 billion per mutual fund.

Such investment will be consistent with the investment objective of the schemes. No investment management fees will be charged by the AMC on such investment.

31. Investment in CDMDF-

In accordance with the requirement of regulation 43A of SEBI (Mutual Funds) Regulations, 1996 read with SEBI circular no. Subsequent to initial contribution, an incremental contribution to CDMDF shall be made every six months (i.e. at the end of half year ended June and December) at the prevalent NAV of the respective Class Units to ensure that in case the AUM of the Scheme further increases, 25 bps of scheme's AUM ((i.e. as on half year ended June and December)) is invested in units of CDMDF.

For UTI Long Duration Fund, the period for consideration of AUM shall be read as 'the scheme shall make initial contribution of 25 bps of AUM as on December 31, 2023 and incremental contribution thereafter on half yearly basis' for all the above provisions.

CDMDF shall comply with the Guarantee Scheme for Corporate Debt (GSCD) as notified by Ministry of Finance vide notification no. G.S.R. 559(E) dated July 26, 2023 and SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/128 dated July 27, 2023 and circulars / guidelines/ Letters issued by SEBI and AMFI from time to time, which includes the framework for corporate debt market development fund. - d) CDMDF shall follow the Fair Pricing document, while purchase of corporate debt securities during market dislocation as specified in SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2023/128 dated July 27, 2023 and circulars / guidelines/ Letters issued by SEBI and AMFI from time to time

- **REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK MITIGATION STRATEGIES:

The scheme may use various derivative products as permitted by the Regulations. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Primarily, derivatives including Interest Rate Futures would be used for purpose of hedging and portfolio balancing.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Risk indicators & internal limits are defined and judiciously monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigation measures.

Exposure limits as per provision no. 12.24.1 and 12.25.1 to 12.25.7 of para 12.24 and 12.25 under Chapter 12 of SEBI Master Circular for Mutual Funds:

- a. The cumulative gross exposure through debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- e. exposure due to hedging positions may not be included in the above mentioned limits subject to the following
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by

the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.

- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss.

Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- (i) To reduce interest rate risk a scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$

- (ii) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

- (iii) Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:

- Exposure to IRFs is created **only for hedging** the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (*excluding the hedged portions, if any*) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of paragraph 12.24.1 of para 12.24 under Chapter 12 of SEBI Master Circular for Mutual Funds, the correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
 - The correlation for past 90 days between the part of the portfolio (*excluding the hedged portions, if any*) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.
- At no point of time, the net modified duration of part of the portfolio being hedged should be negative.
 - The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of paragraph 12.24.1 of para 12.24 under Chapter 12 of SEBI Master Circular for Mutual Funds.

- The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

- The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

II. INFORMATION ABOUT THE SCHEME:

A. WHERE WILL THE SCHEME INVEST? – Detailed description of the instruments mentioned in Section I

Debt and money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	: Stated value of the paper / Principal Amount
Coupon	: Zero, fixed or floating
Frequency	: Semi-annual, annual, sometimes quarterly
Maturity	: Bullet, staggered
Redemption	: FV, premium or discount
Options	: Call/Put
Issue Price	: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on government securities or treasury bill etc. They are mostly discounted instruments that are issued at a discount to face value.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year

Long Term Debt market in India comprises mainly of two segments *viz.*, the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

Securitised Debt Instruments – Asset securitization is a process of transfer of risk whereby commercial or consumer receivables are pooled packaged and sold in the form of financial instruments. A typical process of asset securitisation involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments to investors, which are rated by an independent credit rating agency. Bank, Corporates, Housing and Finance companies generally issue securitised instruments. The underlying receivables generally comprise of loans of Commercial Vehicles, Auto and Two wheeler pools, Mortgage pools (residential housing loans), Personal Loan, credit card and Corporate receivables. The instrument, which is issued, includes loans or receivables maturing only after all receivables are realized. However depending on timing of underlying receivables, the average tenure of the securitized paper gives a better indication of the maturity of the instrument.

(iii) Regulators

The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of security issuance and eligible investors:

Issuer	Instruments	Yields % (as on 31.03.2025)	Maturity	Investors

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, Government Securities (G-Sec) trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in G Sec owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

<p>Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)</p>	<p>FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents (“US persons” as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant.</p> <p>FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts.</p> <p>The identification of US person will be based on one or more of following “US indicia”-</p> <ul style="list-style-type: none"> • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. <p>FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws.</p> <p>FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously.</p> <p>In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/ requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date.</p> <p>Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information</p> <p>On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI).</p>
