NOTE ON DEBT MARKET & MONEY MARKET IN INDIA

The Indian debt markets are one of the largest such markets in Asia. Government and Public Sector enterprises are predominant borrowers in the market. While interest rates were regulated till a few years back, there has been a rapid deregulation and currently both the lending and deposit rates are market determined.

The debt markets are developing fast, with the rapid introduction of new instruments including Foreign Portfolio Investors are also allowed to invest in Indian debt markets now. There has been a considerable

increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills & Cash Management Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates.

Following table exhibits various debt instruments along with indicative yields as on October 28, 2025:

Portfolio Turnover

Portfolio turnover in the scheme will be a function of market opportunities. It is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The AMC will endeavor to optimize portfolio turnover to optimize risk adjusted return keeping in mind the cost associated with it. A high portfolio turnover rate is not necessarily a drag on portfolio performance and may be representative of investment opportunities that exist in the market. Portfolio Turnover is not applicable to a Fund of Funds Scheme.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the scheme will be benchmarked against ICE 0-1 Year US Treasury Securities Index.

The composition of the aforesaid benchmark is such that, it is most suited for comparing performance

The Trustees may change the benchmark in future if a benchmark better suited to the investment objective of the scheme is available, provided any change in benchmark will be subject to regulatory approval of SEBI.

However, the AMC shall not charge any investment management and advisory fee on such investment in the Scheme, in accordance with sub-regulation 17 of Regulation 25 of the Regulations and shall charge fees on such amounts in future only if the SEBI Regulations so permit.

The AMC shall invest in the scheme based on the risk associated with the scheme as specified in para 6.9 of the SEBI Master Circular.

The Scheme may invest in another scheme managed by the same AMC or by the AMC of any other Mutual Fund without charging any fees on such investments, provided that aggregate inter-scheme investment made by all schemes managed by the same AMC or by the AMC of any other Mutual Fund shall not exceed 5% of the net asset value of the Fund. For detailed provisions refer SAI.

PART III- OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date. The Fund shall value its investments according to the valuation norms, as specified in Schedule VIII of the Regulations, or such norms as may be prescribed by SEBI from time to time.

All expenses and incomes accrued up to the valuation date shall be considered for computation of NAV. For this purpose, major expenses like management fees and other periodic expenses would be accrued on a day to day basis. The minor expenses and income will be accrued on a periodic basis, provided the non-daily accrual does not affect the NAV calculations by more than 1%.

Any changes in securities and in the number of units be recorded in the books not later than the first valuation date following the date of transaction. If this is not possible given the frequency of the Net Asset Value disclosure, the recording may be delayed upto a period of seven days following the date of the transaction, provided that as a result of the non-recording, the Net Asset Value calculations shall not be affected by more than 1%.

In case the Net Asset Value of a scheme differs by more than 1%, due to non - recording of the transactions, the investors or scheme/s as the case may be, shall be paid the difference in amount as follows:-

- (i) If the investors are allotted units at a price higher than Net Asset Value or are given a price lower than Net Asset Value at the time of sale of their units, they shall be paid the difference in amount by the scheme.
- (ii) If the investors are charged lower Net Asset Value at the time of purchase of their units or are given higher Net Asset Value at the time of sale of their units, asset management company shall pay the difference in amount to the scheme.

The asset management company may recover the difference from the investors.

NAV of units under the Scheme shall be calculated as shown below:

NAV (Rs.) =

Market or Fair Value of Scheme's investments	+	Current Assets including Accrued Income	-	Current Liabilities and Provisions including accrued expenses
--	---	---	---	---

No. of Units outstanding under Scheme

During the continuous offer of the scheme, the units will be available at the applicable NAV based prices. This is the price that an investor will pay for purchase / switch in. Ongoing price for redemption (sale) /switch outs (to other schemes/plans of the Mutual Fund) by investors:

At the applicable NAV subjects to prevailing exit load.
This is the price you will receive for redemptions/switch outs.

Illustration:

Computation of NAV - Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs. 25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000. Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{10000000 + 2500000 - 1500000}{500000} = 22.000$$

Therefore, the NAV of the scheme is Rs. 22.000

Computation of Repurchase Price - If the applicable NAV is Rs. 10, exit load is 2% then redemption price will be: Rs. $10 * (1 - 0.02) = \text{Rs. } 9.80$

The Redemption Price will not be lower than 97% of the NAV.

For details on policies related to computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV, please refer SAI.

The NAV of the Scheme will be calculated upto four decimal places and will be declared on each business day. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and shall be subject to such regulations as may be prescribed by SEBI from time to time.

NAV of the Scheme shall be made available on the website of AMFI (www.amfiindia.com) and the Mutual Fund (www.bandhanmutual.com) by 10.00 a.m. on next business day. Since the Scheme will invest in overseas mutual fund schemes, the NAV of the scheme will be based on the NAV of such underlying overseas schemes. The NAV of the underlying schemes may be declared on the same or the next business day. In light of the same and considering the differences in time zones, the NAV of the Scheme will be declared by 10.00 a.m. on the next business day. The NAV shall also be available on the call free number 1-800-300-66688 and on the website of the Registrar CAMS (www.camsonline.com). Investors may also place a specific request to the Mutual Fund for sending latest available NAV through SMS.

In case the NAV is not uploaded by 10.00 a.m. on next business day, it shall be explained in writing to AMFI for non adherence of time limit for uploading NAV on AMFI's website. If the NAVs are not available before the commencement of business hours on the following day due to any reason, the Mutual Fund shall issue a press release giving reasons and explaining when the Mutual Fund would be able to publish the NAV.

During the continuous offer of the scheme, the units will be available at the applicable NAV based prices. This is the price that an investor will pay for purchase / switch in. Ongoing price for redemption (sale) /switch outs (to other schemes/plans of the Mutual Fund) by investors:

At the applicable NAV subjects to prevailing exit load. This is the price you will receive for redemptions/switch outs.

Example: If the applicable NAV is Rs. 10, exit load is 2% then redemption price will be: Rs. $10 * (1 - 0.02) = \text{Rs. } 9.80$

The Redemption Price will not be lower than 97% of the NAV.

Disclosure to the effect that the repurchase price shall not be lower than 97% of the NAV. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

SECTION II

I. INTRODUCTION

A. Definitions/interpretation

Refer the following link for Definitions/interpretations

<https://bandhanmutual.com/downloads/sid>

B. Risk factors

Scheme specific risk factors

- The investors will bear the recurring expenses of the Scheme in addition to the expenses of the Underlying Schemes in which Investments are made by the scheme. As a result, the returns that they may obtain may be materially impacted or at times be lower than the returns that investors directly investing in such Schemes may obtain.
- The Scheme returns can be impacted by issues pertaining to the NAVs of underlying schemes of mutual funds where the fund has invested. These could be issues such as uncharacteristic performance, changes in the business ownership and / or investment process, key staff departures etc.
- The returns of the Scheme will depend on the choice of underlying scheme of mutual funds and allocation of capital to underlying scheme by the Fund Manager. An inappropriate decision in either or both may have an adverse impact on the returns of the FoF Scheme.
- The NAVs of the underlying scheme where the Scheme has invested may be impacted generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in government policies, taxation laws or any other appropriate policies and other political and economic developments. Consequently, the NAV of the Scheme may fluctuate accordingly.
- Investments in underlying schemes will have all the risks associated with the underlying schemes including performance of underlying securities, derivative investments, off shore investments, security lending etc.
- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the underlying scheme of mutual funds wherein the Scheme has invested. As a result, the time taken by the Mutual Fund for the redemption of units may be significant in the event of a high number of redemption requests or a restructuring of the scheme. In view of the above, the Trustee has a right in its sole discretion, to limit redemptions under certain circumstances as described under the section titled “Right to Restrict Redemptions”.
- If the AMC were to charge an Exit load and the underlying schemes do not waive/exempt the Exit Load charged on Investment/redemptions, the investors will incur load charges on two occasions. First, on their investment /redemptions/ switches in the options under the Scheme and second, on the Scheme’s investment / redemption / switches in the options under the underlying schemes.
- The tax benefits available to the FoF Scheme are the same as those available under the current taxation laws and subject to relevant conditions. The information given is included for general purposes only and is based on advice that the AMC has received regarding the law and the practice that is currently in force in India. The investors and the unitholders should be aware that the relevant fiscal rules and their interpretation may change. As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/unitholder is advised to consult his/her own professional tax advisor.
- There will be no prior intimation or prior indication given to the Unit holders when the composition/ asset allocation pattern under the scheme changes within the broad range defined in this Scheme Information Document.
- The scheme specific risk factors of each of the underlying schemes become applicable where a fund of funds invests in any underlying scheme. Investors who intend to invest in Fund of Funds are required

to and are deemed to have read and understood the risk factors of the underlying schemes relevant to the Fund of Fund scheme that they invest in.

- As the investors are incurring expenditure at both the Fund of Funds level and the schemes into which the Fund of Funds invests, the returns that they may obtain may be materially impacted or may at times be lower than the returns that investors directly investing in such schemes obtain.
- As the Fund of Funds scheme may shift the weightage of investments between schemes into which it invests, the expenses charged being dependent on the structure of the underlying schemes (being different) may lead to a non- uniform charging of expenses over a period of time.
- As the Fund of Funds (FOF) factsheets and disclosures of portfolio will be limited to providing the particulars of the schemes invested at FOF level, investors may not be able to obtain specific details of the investments of the underlying schemes.
- The NAV of the scheme to the extent invested in Money market securities, are likely to be affected by changes in the prevailing rates of interest which may affect the value of the Scheme's holdings and thus the value of the Scheme's Units.
- Investment decisions made by the AMC may not always be profitable.
- In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme to generate enough liquidity because of market conditions, there may be delays in redemption of units.
- While the scheme endeavors to give Income Distribution cum capital withdrawal on a monthly basis, the ability for payment of the same will be dependent on the scheme having distributable surplus. Accordingly, investors may not get Income Distribution cum capital withdrawal in certain months in case distributable surplus is not available.
- While the Scheme will invest in an open ended fund, investors are requested to note that any steps taken by the underlying fund like imposing a freeze on redemption or winding up of the underlying fund will have an impact on the investors of Bandhan All Seasons Bond Fund including but not limited to impact on the redemptions placed by the investors in of Bandhan All Seasons Bond Fund.

SPECIFIC RISKS IN INVESTING IN DEBT MARKETS AND CAPITAL MARKETS

Investments in Financial Instruments are faced with the following kinds of risks. Risks associated with Debt / Money Markets (i.e. Markets in which Interest bearing Securities or Discounted Instruments are traded)

- a) Credit Risk:** Securities carry a Credit risk of repayment of principal or interest by the borrower. This risk depends on micro-economic factors such as financial soundness and ability of the borrower as also macro-economic factors such as Industry performance, Competition from Imports, Competitiveness of Exports, Input costs, Trade barriers, Favorability of Foreign Currency conversion rates, etc.

Credit risks of most issuers of Debt securities are rated by Independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple A" denoting "Highest Safety") to "D" (denoting "Default"), with about 6 distinct ratings between the two extremes.

The highest credit rating (i.e. lowest credit risk) commands a low yield for the borrower. Conversely, the lowest credit rated borrower can raise funds at a relatively higher cost. On account of a higher credit risk for lower rated borrowers, lenders prefer higher rated instruments further justifying the lower yields.

- b) Price-Risk or Interest-Rate Risk:** From the perspective of coupon rates, Debt securities can be classified in two categories, i.e., Fixed Income bearing Securities and Floating Rate Securities. In Fixed Income Bearing Securities, the Coupon rate is determined at the time of investment and paid/received at the predetermined frequency. In the Floating Rate Securities, on the other hand, the coupon rate changes - 'floats' - with the underlying benchmark rate, e.g., MIBOR, 1 yr. Treasury Bill.

Fixed Income Securities (such as Government Securities, bonds, debentures and money market instruments) where a fixed return is offered, run price-risk. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The extent of fall or rise in the prices is a function of the existing coupon, the payment-frequency of such coupon, days to maturity and the increase or decrease in the level of interest rates. The prices of Government Securities (existing and new) will be influenced only by movement in interest rates in the financial system. Whereas, in the case of corporate or institutional fixed income securities, such as bonds or debentures, prices are influenced not only by the change in interest rates but also by credit rating of the security and liquidity thereof.

Floating rate securities issued by a government (coupon linked to Treasury bill benchmark or a real return inflation linked bond) have the least sensitivity to interest rate movements, as compared to other securities. The Government of India has already issued a few such securities and the Investment Manager believes that such securities may become available in future as well. These securities can play an important role in minimizing interest rate risk on a portfolio.

- c) **Risk of Rating Migration:** There is a risk of rating migration which may have impact on the yield of the security. For e.g.: On the price of a hypothetical AA rated security with a maturity period of 3 years, a coupon of 10.00% p.a. and a market value of Rs. 100. If it is downgraded to A category, which commands a market yield of, say, 11.00% p.a., its market value would drop to Rs. 97.53 (i.e. 2.47%). If the security is up-graded to AAA category which commands a market yield of, say, 9.00% p.a. its market value would increase to Rs102.51 (i.e. by 2.51%).
- d) **Basis Risk:** During the life of floating rate security or a swap the underlying benchmark index may become less active and may not capture the actual movement in the interest rates or at times the benchmark may cease to exist. These types of events may result in loss of value in the portfolio. Where swaps are used to hedge an underlying fixed income security, basis risk could arise when the fixed income yield curve moves differently from that of the swap benchmark curve.
- e) **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. However depending upon the market conditions the spreads may move adversely or favorably leading to fluctuation in NAV.
- f) **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently the proceeds may get invested at a lower rate.
- g) **Liquidity Risk:** The corporate debt market is relatively illiquid vis-a-vis the government securities market. There could therefore be difficulties in exiting from corporate bonds in times of uncertainties. Liquidity in a scheme therefore may suffer. Even though the Government Securities market is more liquid compared to that of other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through. In view of this, redemption may be limited or suspended after approval from the Boards of Directors of the AMC and the Trustee.

Risks associated with Investing in Derivatives:

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. As and when the Scheme trade in the

derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analyses different from those associated with bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is the possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the “counter party”) to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Also, the market for derivative instruments is nascent in India.

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments.

The specific risk factors arising out of a derivative strategy used by the Fund Manager may be as below:

- Lack of opportunity available in the market.
- The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Risk associated with Interest Rate Future (IRF):

An Interest Rate Futures is an agreement to buy or sell a debt instruments at a specified future date at a price that is fixed today. Interest Rate Futures are Exchange Traded and are cash settled. Hedging using Interest Rate Futures can be perfect or imperfect. Perfect hedging means hedging the underlying using IRF contract of same underlying.

- (i) **Market risk:** Derivatives carry the risk of adverse changes in the market price.
- (ii) **Liquidity risk** – This occurs where the derivatives cannot be sold (unwound) at prices that reflect the underlying assets, rates and indices.
- (iii) **Model Risk** - The risk of mispricing or improper valuation of derivatives.
- (iv) **Basis Risk** – This risk arises when the instrument used as a hedge does not match the movement in the instrument/ underlying asset being hedged. The risks may be inter-related also; for e.g. interest rate movements can affect equity prices, which could influence specific issuer/industry assets.

Risk associated with imperfect hedge using IRF:

In case the IRF used for hedging the interest rate risk has different underlying security than the existing position being hedged, it would result in imperfect hedging.

- (i) **Basis Risk:** Basis risk is the risk that arises when the instrument used as a hedge does not match the movement in the instrument/ underlying asset being hedged. This could result into potential gains or losses from the strategy, thus adding risk to the position.
- (ii) **Price Risk:** The risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.
- (iii) **Risk of mismatch between the instruments:** The risk arises if there is a mismatch between the prices movements in derivative instrument used to hedge, compared to the price movement of the underlying assets being hedged. For example, when IRF which has government security as underlying is used to hedge a portfolio that contains corporate debt securities.
- (iv) **Correlation weakening and consequent risk of regulatory breach:** SEBI Regulation mandates minimum correlation criterion of 0.9 (calculated on a 90-day basis) between the portfolio being hedged

and the derivative instrument used for hedging. In cases where the correlation falls below 0.9, a rebalancing period of 5 working days has been permitted. In ability to satisfy this requirement to restore the correlation level to the stipulated level, within the stipulated period, due to difficulties in rebalancing would lead to a lapse of the exemption in gross exposure computation. The entire derivative exposure would then need to be included in gross exposure, which may result in gross exposure in excess of 100% of net asset value.

C. Risk mitigation strategies

Pursuant to clause 14.4 of SEBI Master Circular, investors are requested to note the following regarding dispatch of account statements: A) Consolidated Account Statement (CAS) - for Unitholders who have registered their PAN / PEKRN with the Mutual Fund: <u>Investors who hold demat account and have registered their PAN with the mutual fund:</u> For transactions in the schemes of Bandhan Mutual Fund, a Consolidated Account Statement, based on PAN of the holders, shall be sent by

Depositories to investors holding demat account, for each calendar month on or before fifteenth day of the succeeding month to the investors in whose folios transactions have taken place during that month.

However, option shall be given to the demat account holder by the default depository to choose the depository through which the investor wishes to receive the CAS.

In case of demat accounts with nil balance and no transactions in securities and in mutual fund folios, the depository shall send the account statement to the investor as specified under the regulations applicable to the depositories.

The CAS shall also provide the total purchase value / cost of investment in each scheme.

Further, a consolidated account statement shall be sent by Depositories every half yearly (September/March), on or before twenty first day of succeeding month.

Such half-yearly CAS shall be issued to all MF investors, excluding those investors who do not have any holdings in MF schemes and where no commission against their investment has been paid to distributors, during the concerned half-year period.

Investors whose folio(s)/demat account(s) are not updated with PAN shall not receive CAS. Investors are therefore requested to ensure that their folio(s)/demat account(s) are updated with PAN.

For Unit Holders who have provided an e-mail address to the Mutual Fund or in KYC records, the CAS will be sent by e-mail. However, where an investor does not wish to receive CAS through email, option shall be given

	to the investor to receive the CAS in physical form at the address registered in the Depository system. Investors who do not wish to receive CAS sent by depositories have an option to indicate their negative consent. Such investors may contact the depositories to opt out. <u>Other investors:</u> The Consolidated Account Statement (CAS) for each calendar month shall be issued on or before fifteenth day of succeeding month to the investors who have provided valid Permanent Account Number (PAN) / PAN Exempt KYC Registration Number (PEKRN). Due to this regulatory change, AMC has now ceased sending physical account statement to the investors after every financial transaction including systematic transactions. The CAS shall be generated on a monthly basis. The Consolidated Account Statement issued is a statement containing details relating to all financial transactions made by an investor across all mutual funds viz. purchase, redemption, switch, Payout of IDCW option, Reinvestment of IDCW option, systematic investment plan, systematic withdrawal plan, systematic transfer plan, bonus etc. (including transaction charges paid to the distributor) and holding at the end of the month. The CAS shall also provide the total purchase value / cost of investment in each scheme. Further, a consolidated account statement shall be issued every half yearly (September/March), on or before twenty first day of succeeding month. Such half-yearly CAS shall be issued to all MF investors, excluding those investors who do not have any holdings in MF schemes and where no commission against their investment has been paid to distributors, during the concerned half-year period. The CAS will be sent via email (instead of physical statement) where any of the folios consolidated has an email id or to the email id of the first unit holder as per KYC records. B) For Unitholders who have not registered their PAN / PEKRN with the Mutual Fund: For folios not included in the Consolidated Account Statement (CAS): • The AMC shall allot the units to the applicant whose application has been accepted and also send confirmation specifying the number of units allotted to the applicant by way of email and/or SMS's to the applicant's registered email address and/or mobile number within five working days from the date of transaction. • The AMC shall issue account statement to the investors on a monthly basis, pursuant to any financial transaction in such folios on or before tenth day of succeeding month.
