- vi. AMC will not charge any investment management and advisory fees for parking of funds in short term deposits of scheduled commercial banks.

The above provisions do not apply to term deposits placed as margins for trading in cash and derivative market.

The underlying index shall comply with the below restrictions in line with clause 3.4 of SEBI Master circular:

- a) The index shall have a minimum of 10 stocks as its constituents.
- b) For a sectoral/ thematic Index, no single stock shall have more than 35% weight in the index. For other than sectoral/ thematic indices, no single stock shall have more than 25% weight in the index.

- d) The individual constituent of the index shall have a trading frequency greater than or equal to 80% and an average impact cost of 1% or less over previous six months.

The net assets of the scheme will be invested in stocks constituting the Nifty Private Bank Index. This would be done by investing in all the stocks comprising the Nifty Private Bank Index in the same weightage that they represent in the Nifty Private Bank Index. A small portion of the net assets will be invested in Cash and Cash Equivalents.

Index futures/options are meant to be an efficient way of buying/selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. It can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Equity Derivatives can be used as a tool for cash equitization and where the fund has got cash (within the maximum permissible asset allocation table), in case where rebalance comes, then instead of cash, index contract can be used for temporary basis. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the underlying index and will be easy to settle compared to physical portfolio of shares representing the underlying index. In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future/option. The Scheme will not maintain any leveraged or trading positions.

Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions. Exposure to such derivatives will be restricted to 20% of net assets of the scheme. However, investment in

derivatives will be for a temporary period on defensive considerations. The Scheme shall rebalance the portfolio in case of any deviation to the asset allocation. Such rebalancing shall be done within 7 calendar days from the date of such deviation. Investment in derivatives shall be made in accordance with clause 12.25 of SEBI Master Circular and such other guidelines on derivatives as issued by SEBI from time to time.

In accordance with, clause 12.11 of SEBI Master Circular, the Scheme will not generally deploy more than 20% of its net assets in stock lending and not more than 5% of its net assets through a single intermediary (i.e the limit of 5% will be at broker level).

Cumulative gross exposure:

As per clause 12.24 of SEBI Master Circular, the cumulative gross exposure through equity, derivative position and other permitted securities/ asset class as may be permitted by the Board from time to time subject to regulatory approvals, if any shall not exceed 100% of the net assets of the scheme. Cash and cash equivalents as per SEBI letter no. SEBI/HO/ IMD-II/DOF3/ OW/P/ 2021/ 31487 / 1 dated November 03, 2021 which includes T-bills, Government Securities, Repo on Government Securities and any other securities as may be allowed under the regulations prevailing from time to time subject to the regulatory approval, if any, having residual maturity of less than 91 Days, shall not be considered for the purpose of calculating gross exposure limit

In the event of involuntary corporate action, the Scheme shall endeavor to dispose the security not forming part of the Underlying index within 7 business days from the date of listing, subject to availability of adequate liquidity for the security.

Portfolio Rebalancing:

Rebalancing of deviation due to short term defensive consideration:

Due to market conditions, the AMC may invest beyond the range set out in the asset allocation. Such deviations shall normally be for a short term and defensive considerations as per clause 1.14.1.2 of SEBI Master Circular; the intention being at all times to protect the interests of the Unit Holders and the Scheme shall rebalance the portfolio within 7 calendar days from the date of deviation.

It may be noted that no prior intimation/indication will be given to investors when the composition/asset allocation pattern under the Scheme undergoes changes within the permitted band as indicated above.

Portfolio rebalancing in case of passive breach:

In line with clause 3.6.7.1 of SEBI Master Circular, in case of change in constituents of the index due to periodic review, the portfolio of Scheme shall be rebalanced within 7 calendar days.

Further, any transactions undertaken in the portfolio of Index Schemes in order to meet the redemption and subscription obligations shall be done while ensuring that post such transactions replication of the portfolio with the index is maintained at all points of time.

CHANGE IN INVESTMENT PATTERN

The Scheme, will hold all the securities that comprise the underlying Index in the same proportion as the index.

Expectation is that, over a period of time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2% p.a. for daily 12 month rolling return. However, in case of events like, dividend issuance by constituent members, rights issuance by constituent members, and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Basket, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. Since the Scheme is an

exchange traded fund, it will endeavor that at no point of time the scheme will deviate from the index.

B. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme will be invested in various types of securities (including but not limited to) such as:

1. Equity and Equity related securities of companies constituting Nifty Private Bank Index
2. Stock futures / index futures and such other permitted derivative instruments only for portfolio rebalancing.
3. Cash and Cash Equivalents.
4. Short Term Deposits

For detailed definition and applicable regulations/guidelines for each instrument please refer Section II.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme will track its Underlying Index and will use a “passive” or indexing approach to endeavor to achieve scheme’s investment objective. The scheme will neither try to beat the index it tracks nor take active approach in times when markets seem to be over/under valued. The AMC does not make any judgments about the investment merit of a particular stock or a particular industry segment nor will it attempt to apply any economic, financial or market analysis. Since the scheme is an exchange traded fund, the scheme will only invest in the security constituting the underlying index.

Since the scheme is an exchange traded fund, it will endeavor that at no point of time the scheme will deviate from the index.

Derivative Strategies

Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions. However, investment in derivatives will be for a temporary period on defensive considerations.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

For detailed derivative strategies, please refer to SAI

PORTFOLIO TURNOVER POLICY

Portfolio Turnover measures the volume of trading that occurs in a Scheme’s portfolio during a given time period. The Scheme is an open-ended Exchange Traded Fund and it is expected that there may be a number of subscriptions and repurchases on a daily basis through Stock Exchange(s) or Market Makers and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition, if any, and corporate actions of securities included in Nifty Private Bank Index. However, it will be the endeavor of the Fund Manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the Scheme and the purchase/ redemption transactions on an ongoing basis in the Scheme.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark (Total Returns Index): Nifty Private Bank TRI.

Justification for Benchmark- The corpus of DSP Nifty Private Bank ETF will be invested in all the stocks constituting Nifty Private Bank TRI, in same weightage of the Index. The Scheme would endeavor to attain returns comparable to Nifty Private Bank TRI, subject to the tracking error. The Benchmark has been chosen on the basis of the investment pattern/objective of the scheme and the composition of the index.

PART III. OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of a Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

NAV of Units under each Scheme may be calculated by either of the following methods shown below:

$$\text{NAV Per Unit (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

The numerical illustration of the above method is provided below.

Market or Fair Value of Scheme's investments (Rs.) = 11,42,53,650.00

Current Assets (Rs.) = 10,00,000.00

Current Liabilities and Provisions (Rs.) = 5,00,000.00

No. of Units outstanding under the Scheme = 1,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{11,42,53,650.00 + 10,00,000.00 - 5,00,000.00}{1,00,00,000} = 11.4754$$

N.B.: The aforesaid provisions pertaining to "Calculation of NAV" shall apply in respect of each individual Scheme and/or plan as the case may be. The NAV Per Unit above is rounded off to four decimals.

The NAV will be calculated as of the close of every Business Day.

NAVs will be rounded off to four decimal places. The valuation of the Schemes' assets and calculation of the Schemes' NAVs shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

Note: In respect of Schemes having Growth and IDCW Options, there will be more than one NAV, one for each Option, after the declaration of the first IDCW by that Scheme.

While determining the price of the units, the mutual fund shall ensure that the repurchase price of Scheme is not be lower than 95% Net Asset Value as provided under SEBI (MF) Regulations. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

However, the investor shall have to bear costs in form of bid/ask spread or brokerage or such other cost as charged by his broker for transacting in units of the scheme through secondary market

E. INTRODUCTION TO EXCHANGE TRADED FUNDS

An ETF is a passively managed product that provides exposure to an index or a basket of securities with the objective of generating returns as close to the index as possible. The key benefit of an ETF over traditional open-ended index funds is liquidity and availability of real-time market price on stock exchange. They can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs provide investors a fund that tracks the performance of an index with the ability to buy/sell on an intra-day basis. ETFs are structured in a manner which allows creating new units (called creation units) and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription/redemption of units works on the concept of exchange with underlying securities. In other words, large investors/institutions can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange. ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation/Redemption of units through the in-kind mechanism the mutual fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

Benefits of ETFs

- Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at nearly the real-time prices as opposed to end of day prices.
- Ability to put limit orders.
- Protects long-term investors from the inflows and outflows of short-term investors. This is because the fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.
- Flexible as it can be used as a tool for gaining instant exposure to the equity markets, equitising cash, for arbitraging between the cash and futures market.

Market for ETFs:

ETFs are passive in nature and can be useful for various kinds of investors. It could be for experienced investors who recognize the impact of cost on their eventual investment outcomes or relatively inexperienced / newer investors who are considering starting to invest but are not sure how, and therefore need a simple instrument that gives them access to the broad market or to specific sectors they believe in. Over the past few years, there has been a good growth in the number of investors as well as the assets under management for ETFs. The primary categories of ETFs in India are: Nifty 50 and Sensex based ETFs, Government Disinvestment mandates like CPSE, Bharat 22 and Bharat Bond, Banking Sector ETFs, and Gold ETFs. There are also few fixed income, smart beta, sectoral and thematic ETFs, tracking specified indices. Given the ETF market globally has grown significantly over the past few years, there is a strong case that the size and breadth of the ETF market has a potential go up in India in years to come.

F. TRACKING ERROR & TRACKING DIFFERENCE

Tracking Error:

Tracking Error may arise due to reasons including but not limited to the following: -

- a. Expenditure incurred by the fund.
- b. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The fund may not be invested at all times as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- c. Securities trading may halt temporarily due to circuit filters.
- d. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- e. Rounding off of quantity of shares in underlying index.
- f. Dividend payout.
- g. Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc.
- h. Execution of large buy / sell orders
- i. Transaction cost (including taxes and insurance premium) and recurring expenses
- j. Realization of Unit holder's funds

It will be the endeavor of the fund manager to keep the tracking error as low as possible. Under normal circumstances, such tracking error is not expected to exceed 2% per annum. However, in case of events like, dividend received from underlying securities, rights issue from underlying securities, and market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances and force majeure which are beyond the control of the AMC, the tracking error may exceed 2% and the same shall be brought to the notice of the Board of Trustees with the corrective actions taken by the AMC, if any. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

Tracking Error of the Index Schemes based on past one year rolling data, shall be disclosed on a daily basis, on the website of AMC i.e. www.dspim.com and AMFI.

Tracking Difference:

Tracking Difference is defined as the annualized difference of daily returns between the index and the NAV of the ETF Schemes.

Tracking difference of the Scheme shall be disclosed on the website of the AMC i.e. www.dspim.com and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

B. Risk Factors

Scheme Specific Risk Factors

Risk associated with favorable taxation of certain scheme in India:

In any event beyond the control of AMC if the scheme is not able to invest the minimum % of the threshold that it is required to invest in eligible asset classes as per the domestic income tax regulation and rule, the benefit of lower tax, if any, on income distribution or capital gains may not be available to the Unit Holders.

The summary of tax implications given in the taxation section (Units and Offer Section) is based on the existing provisions of the tax laws. The current taxation laws may change due to change in the

domestic Tax Act or any subsequent changes / amendments in Finance Act / Rules / Regulations. Such change may entail a higher tax to the scheme or to the investors by way of any tax as made applicable thus adversely impacting the scheme.

The investor is requested to consult their tax counsel for detail understanding of the tax laws and the risk factor associated with such tax laws.

Risk of Substantial Redemptions in ETFs:

The Scheme(s) at times may receive large number or large value of direct redemption requests as per the provision of the SID.

The liquidity of underlying investments may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances beyond the influence of the AMC. The inability of the Scheme to sell intended securities due to liquidity & settlement problems, could cause delay for processing the large number of direct redemptions. The Trustee, in the general interest of the Unit holders of the Schemes offered under this SID and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Working Day depending on the total "Saleable Underlying Stock" available with the Fund. Risk associated with principles of efficient portfolio management:

The Scheme may use models, techniques and instruments for efficient portfolio management and may also attempt to hedge or reduce the risk. The Scheme's ability to use these techniques may be limited by market conditions, regulatory limits and tax considerations (if any). The use of these techniques is further dependent on the ability to predict movements in the prices of securities being hedged and movements in macro variables such as interest rates. There exists an imperfect correlation between the hedging instruments and the securities or market sectors being hedged. Thus due to mentioned bottleneck these techniques and instruments if imperfectly used have the risk of the Scheme incurring losses due to mismatches particularly in a volatile market. There could be possible absence of a liquid market for any particular instrument at any particular time even though the futures and options may be bought and sold on an exchanges.

Further the returns from the types of securities or assets in which the scheme invests may under perform returns of general Securities markets or different asset classes. Different types of Securities tend to go through cycles of out-performance and under-performance in comparison of Securities markets.

Risk Factors associated with investments in passive schemes :

i. Passive Investments:

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets. The value of the Scheme's investments, may be affected generally by factors affecting equity markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

The scheme will be investing only in the securities included in the underlying index and will be exposed to additional concentration risk in cases where the underlying index has concentration towards any specific sector, theme or market capitalization. The AMC will not have any option to reduce the concentration risk by diversifying the investments.

ii. b. Tracking Error and Tracking Difference Risk:

The Fund Manager would not be able to invest the entire corpus exactly in the same proportion as in the underlying index due to certain factors such as the fees and expenses of the respective scheme, corporate actions, cash balance, changes to the underlying index and regulatory policies which may affect AMC's ability to achieve close correlation with the underlying index of the scheme. The scheme's returns may therefore deviate from those of its underlying index. **"Tracking Error" is defined as the standard deviation of the difference between daily returns of the underlying index and the NAV of the respective scheme. "Tracking Difference" is the annualized difference of daily returns between the Index and the NAV of the scheme (difference between fund return and the index return).** Tracking Error and Tracking difference may arise including but not limited to the following reasons:

- i. Expenditure incurred by the fund.
- ii. The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The fund may not be invested at all time as it may keep a portion of the funds in cash to meet redemptions or for corporate actions.
- iii. Securities trading may halt temporarily due to circuit filters.
- iv. Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc.
- v. Rounding off of quantity of shares in underlying index.
- vi. Dividend payout.
- vii. Disinvestments to meet redemptions, recurring expenses, IDCW payouts etc.
- viii. Execution of large buys / sell orders
- ix. Transaction cost (including taxes and insurance premium) and recurring expenses
- x. Realization of Unit holders funds
- xi. Index providers may either exclude or include new scrips in their periodic review of the scrips that comprise the underlying index. In such an event, the Fund will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately.

SEBI Regulations (if any) may impose restrictions on the investment and/or divestment activities of the Scheme. Such restrictions are typically outside the control of the AMC and may cause or exacerbate the Tracking Error.

It will be the endeavor of the fund manager to keep the tracking error as low as possible. However, in case of events like, dividend received from underlying securities, rights issue from underlying securities, and market volatility during rebalancing of the portfolio following the rebalancing of the underlying index, etc. or in abnormal market circumstances may result in tracking error. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index.

Risks pertaining to transacting in listed units of scheme /ETFs:

- a) **Absence of Prior Active Market:** Although the Scheme is listed on Stock Exchange, there can be no assurance that an active secondary market will develop or be maintained. Hence there would be time when trading in the Units of the Scheme would be infrequent.
- b) **Trading in Units may be Halted:** Trading in the Units of the Schemes on Stock Exchange may be halted because of market conditions or for reasons that in view of Stock Exchange or SEBI, trading in the Units of the Schemes are not advisable. In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to Stock Exchange and SEBI circuit filter rules. There can be no assurance that the requirements of Stock Exchange necessary to maintain the listing of the Units of the Schemes will continue to be met or will remain unchanged.
- c) **Units of the Schemes May Trade at Prices Other than NAV:** The Units of the Schemes may trade above or below their NAV. The NAV of the Schemes will fluctuate with changes in the market value of the holdings of the Schemes. The trading prices of the Units of the Schemes will fluctuate in accordance with changes in their NAV as well as market supply and demand for the Units of the Schemes. However, given that Units of the Schemes can be created and redeemed in Creation Units directly with the Fund, it is expected that large discounts or

premiums to the NAV of Units of the Schemes will not sustain due to arbitrage opportunity available.

- d) **Other Risk related to listed units:** The units will be issued only in dematerialized form through depositories. The records of the depository are final with respect to the number of units available to the credit of unit holder. Settlement of trades, repurchase of units by the mutual fund during the liquidity window depend upon the confirmations to be received from depository (ies) on which the mutual fund has no control.

Investors may note that the scheme would only repurchase units from the Market Makers & Large Investors in eligible Creation Unit Size. Thus unit holdings less than the eligible Creation Unit Size can only be sold through the secondary market on the exchanges

The trading mechanism introduced by the stock exchange(s) is configured to accept and process transactions for mutual fund units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised stock exchange(s), on any Business Day will depend upon the modalities of processing viz. collection of application form, order processing/settlement, etc. upon which the Fund has no control. However, units of the Scheme can only be subscribed in demat mode. Moreover, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized stock exchange(s).

Any changes in trading regulations by Stock Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/discount to NAV.

Risks associated with Equity investments:

Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, changes in law/ policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors. Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

Risk Factors associated with investments in Cash and Cash Equivalents:

- **Price-Risk or Interest-Rate Risk:** Cash and cash equivalents run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. However, Cash and cash equivalents in this scheme are intended to be held till maturity. For such securities held till maturity, there will not be any interest rate risk at the end of the tenure.
- **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation Yield-to-Maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer.
- **Reinvestment Risk:** Investments in cash and cash equivalents may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk:** Certain cash and cash equivalents give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of

such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Risk of illiquid securities:

The Schemes may not be able to immediately sell certain types of illiquid Securities. The prices and subsequent valuation of restricted and illiquid Securities may reflect a premium / discount, which may be significant, from the market price of comparable Securities for which a liquid market exists.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Scheme(s) can go up and down because of various factors that affect the capital markets in general.

The AMC cannot give assurance but will endeavor to liquidate any illiquid securities not a part of the underlying index at the earliest with least possible price impact.

Risk associated with Securities Lending & Borrowing :

Securities Lending and Borrowing ("SLB") is an exchange traded product in India, with trades done on order matching platforms setup by the clearing corporation/house of recognized stock exchanges. In accordance with SEBI guidelines, there is a robust risk management system and safeguards exercised by the clearing corporation/house, which also guarantee financial settlement hence eliminating counterparty risk on borrowers.

The Scheme may participate as a lender in the SLB market and lend securities held in the portfolio for earning fees from such lending to enhance revenue of the Scheme. The key risk to the Scheme is creation of temporary illiquidity due to the inability to sell such lent securities, till the time such securities are returned on the contractual settlement date or on exercise of early recall.

Risk associated with use of equity derivatives in the ETFs:

The Scheme may periodically invest in derivative securities e.g. when a stock(s) is entering/exiting the benchmark index. However, the Scheme will not use derivative instruments for speculative purposes or to leverage its net assets. There may be a cost attached to buying index futures or other derivative instrument. Further there could be an element of settlement risk, which could be different from the risk in settling physical shares.

Risks associated with trading in derivatives:

The use of derivatives may expose Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions may be leveraged in terms of market exposure. A relatively small market movement may have a potentially larger impact on derivatives than on standard bonds or equities. Leveraged derivative positions can therefore increase Scheme volatility.

Derivatives require the maintenance of adequate controls to monitor the transactions and the embedded market risks that they add to the portfolio. Besides the price of the underlying asset, the volatility, tenor and interest rates affect the pricing of derivatives. Other risks in using derivatives include but are not limited to:

- (a) Counterparty Risk** - this occurs when a counterparty fails to abide by its contractual obligations and therefore, the Scheme are compelled to negotiate with another counter party, at the then prevailing (possibly unfavourable) market price. For exchange traded derivatives, the risk is mitigated as the exchange provides the guaranteed settlement but one takes the performance risk on the exchange.
- (b) Market Liquidity Risk** - this occurs where the derivatives cannot be transacted due to limited trading volumes and/or the transaction is completed with a severe price impact.

(c) **Model Risk** - the risk of mis-pricing or improper valuation of derivatives.

(d) **Basis Risk** - arises due to a difference in the price movement of the derivative vis-à-vis that of the security being hedged.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued involve uncertainty and decision of the Investment Manager may not always be profitable. No assurance can be given that the Investment Manager will be able to identify or execute such strategies. Some other risks investors must read carefully before making any investments in this Scheme, as it is expected to make investments in equity derivatives are as follows:

Derivative trades involve execution risks, whereby the rates seen on the screen may not be the rate at which ultimate execution takes place.

- The option buyer's risk is limited to the premium paid.
- Investments in index/stock futures face the similar risk as the investments in the underlying stock or index.
- Risk of loss in trading in futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and potentially high volatility of the futures markets.
- The derivatives market may not have the volumes that may be seen in other developed markets, which may result in volatility in the values.
- The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Risk factors associated with investment in Tri-Party Repo:

The mutual fund is a member of securities segment and Triparty Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL, in the event that the contribution of the mutual fund is called upon to absorb settlement/ default losses of another member by CCIL, as a result the scheme may lose an amount equivalent to its contribution to the default fund.

Risks associated with investment in Sectoral / thematic fund:

Any sectoral or thematic fund will seek to invest in underlying investments belonging to a defined sector or the theme. Investor needs to understand that a specific sector/theme may not achieve desired result / growth and may also experience unexpected changes adversely affecting the

performance, thus investing in a sectoral /thematic fund could involve potentially higher volatility and risk.

C. RISK MITIGATION STRATEGIES

- **Tracking Error and Tracking Difference:** The AMC will to the best of their efforts ensure that the scheme investments are aligned with the underlying index at all the time. By continuously monitoring, the AMC will ensure that the tracking error & tracking difference are well within the regulatory thresholds.
- **Transaction in listed units:** The AMC with help of market makers will monitor and ensure liquidity on the exchanges for trading the units of the ETF. The AMC will also offer direct redemption under special circumstances as defined in SECTION II. G. Other Scheme Specific Disclosures-Redemption.
- **Risk associated with derivatives:** The AMC would adhere to the risk mitigating guidelines / measures issued by SEBI / RBI from time to time for derivative products and will ensure investments in derivative is only as per the investment guidelines documented in SID.
- **Equity Market Risk:** Market risk is inherent to this scheme similar to other equity schemes and is exposed to all the market risk that are inherent to the underlying index at all times. The AMC will ensure that the investment in the scheme are aligned to the underlying index and thus minimizing any additional idiosyncratic risk.
- **Risk associated with Cash and Cash Equivalents:** The scheme will invest in securities as per the intended allocation and thus this risk are low as compared to other risk mentioned above. The AMC will endeavor to minimize the Liquidity Risk, Interest Rate Risk, Reinvestment Risk.
- **Risk associated with Stock Lending:** The investment managers will ensure adherence to the limits assigned for stock lending and will ensure that the liquidity Risk is managed actively within the portfolio liquidity limits by maintaining proper asset-liability match to ensure payout of the obligations. Also to ensure that the counterparty risk is limited the AMC will participate in stock lending only through exchange mechanism where the settlement is guaranteed.

II. INFORMATION ABOUT THE SCHEME

A. Where will the scheme invest?

Subject to the Regulations and the disclosures as made under the section “How the Scheme will allocate its Assets”, the corpus of the Scheme can be invested in any (but not exclusively) of the following securities:

1. Equity related Instruments- Equity Related Instruments include convertible debentures, convertible preference shares, dividend warrants, warrants carrying the right to obtain equity shares, equity derivatives and such other instrument as may be specified by the Board from time to time.
2. Derivatives- Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index, such as: interest rates, exchange rates, commodities, and equities.
3. Options- An Option is a contract which gives holder the right (but not the obligation) to buy or sell a security or other asset during a given time for a specified price called the 'Strike' price.
4. Call Option- A call option is a financial contract that gives the holder the right, but not the obligation, to buy a specified quantity of an underlying asset (such as a stock or commodity) at a predetermined price (strike price) within a specified period. Investors purchase call options when they anticipate that the price of the underlying asset will rise, allowing them to buy the asset at a lower price and potentially sell it at a higher market price for a profit.
5. Put Option- A put option is a financial contract that gives the holder the right, but not the obligation, to sell a specified quantity of an underlying asset (such as a stock or commodity) at a predetermined price (strike price) within a specified period. Investors purchase put options when they anticipate that the price of the underlying asset will decline, allowing them to sell the asset at a higher price than the market value, potentially earning a profit from the price difference.
6. Government Securities- Securities created and issued by the Central Government and/or a State Government (including Treasury Bills) or Government Securities as defined in the Government Securities Act, 2006, as amended or re-enacted from time to time.
7. Repos & Reverse Repos- Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds.
8. TREPS- TREPs is a money market instrument that enables entities to borrow and lend against sovereign collateral security. The maturity ranges from 1 day to 90 days and can also be made available upto 1 year. Central Government securities including T-bills are eligible securities that can be used as collateral for borrowing through TREPs.
9. Treasury Bills- Treasury bills (T-bills) are short-term government securities issued at a discount to their face value and mature within one year. They do not pay periodic interest but provide returns by maturing at their full face value, with the difference between the purchase price and the maturity value representing the investor's earnings. T-bills are considered low-risk investments due to government backing.
10. Short Term Deposits- Pending deployment of funds as per the investment objective of the Scheme, the Funds may be parked in short term deposits of the Scheduled Commercial Banks, subject to guidelines and limits specified by SEBI.

Applicable guidelines/other details where the scheme will invest:

Securities Lending:

Subject to SEBI (MF) Regulations and the applicable guidelines issued by SEBI, the Mutual Fund may engage in stock lending. The AMC shall comply with all reporting requirements and the Trustee shall carry out periodic review as required by SEBI guidelines. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period.

The Investment Manager will apply the following limits, should it desire to engage in Stock Lending:

1. Not more than 20% of the net assets of a Scheme can generally be deployed in Stock Lending.
2. Not more than 5% of the net assets of a Scheme can generally be deployed in Stock Lending to any single intermediary.

Short Term Deposits:

The scheme may invest the funds of the scheme in short term deposits of scheduled commercial banks as permitted under extant regulations.

Pending deployment of funds of the Scheme, the AMC may invest funds of the Scheme in short-term deposits of scheduled commercial banks, subject to the following conditions issued by SEBI vide clause 12.16 of SEBI Master Circular “Short Term” for parking of funds shall be treated as a period not exceeding 91 days.

- i. Such short-term deposits shall be held in the name of the Scheme.
- ii. The Scheme shall not park more than 15% of their net assets in the short term deposit(s) of all the scheduled commercial banks put together. However, it may be raised to 20% with the prior approval of the Trustee. Also, parking of funds in short term deposits of associate and sponsor scheduled commercial banks together shall not exceed 20% of total deployment by the Mutual Fund in short term deposits.
- iii. The Scheme shall not park more than 10% of their net assets in short term deposit(s) with any one scheduled commercial bank including its subsidiaries.
- iv. The Trustee shall ensure that the funds of the Scheme are not parked in the short term deposits of a bank which has invested in the Scheme.
- v. The Trustee shall also ensure that the bank in which a scheme has short term deposits do not invest in the scheme until the scheme has short term deposits with such bank.
- vi. AMC will not charge any investment management and advisory fees for parking of funds in short term deposits of scheduled commercial banks.

The above provisions do not apply to term deposits placed as margins for trading in cash and derivative market.

Further, due to corporate action in companies comprising of the index, the scheme may be allocated/allotted securities which are not part of the index. For example, the Fund may invest in stocks not included in the relevant underlying index in order to reflect various corporate actions (such as mergers) and other changes in the relevant underlying index (such as reconstitutions, additions, deletions and these holdings will be in anticipation and in the direction of impending changes in the underlying index)

Investment in Derivative Instruments:

As part of the Fund Management process, the Scheme may use Derivative instruments such as index futures and options, stock futures and options contracts, warrants, convertible Securities, swap agreements or any other Derivative instruments that are permissible or may be permissible in future under applicable regulations and such investments shall be in accordance with the investment objectives of the Scheme for a short period of time and the portfolio shall be rebalanced within 7 days.

Index futures/options are meant to be an efficient way of buying/selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. Index futures/options can be an efficient way of achieving the Scheme's investment objective. Notwithstanding the pricing, they can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the underlying index and will be easy to settle compared to physical portfolio of shares representing the underlying index.

In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future/option. The Scheme will not maintain any leveraged or trading positions.

Purpose of investment in Derivatives

- a) The Scheme shall fully cover its positions in the Derivatives market by holding underlying Securities/cash or cash equivalents/option and/or obligation for acquiring underlying assets to honour the obligations contracted in the Derivatives market.
- b) The Securities held would be marked to market by the AMC to ensure full coverage of investments made in Derivative products at all times.

Trading in Derivatives

The Mutual Fund may use various derivatives only for the purpose of Portfolio Rebalancing of the Scheme. Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index. The Scheme while investing in equities shall transact in exchange traded equity derivatives only and these instruments may take the form of Index Futures, Index Options, Futures and Options on individual equities/securities and such other derivative instruments as may be appropriate and permitted under the SEBI Regulations and guidelines from time to time.

Key features of Trading in Derivatives

The use of derivatives provides flexibility to the Schemes only for the purpose of Portfolio Rebalancing. The following section describes some of the more common derivatives transactions with illustrations.

Derivatives are financial contracts of pre-determined fixed duration, whose values are derived from the value of an underlying primary financial instrument, commodity or index, such as interest rates, exchange rates, commodities and equities.

1. Futures

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Currently, futures contracts have a maximum expiration cycle of 3 months. Three contracts are available for trading, with 1 month, 2 months and 3 months expiry respectively. A new contract is introduced on the next trading day following the expiry of the relevant monthly contract. Futures contracts typically expire on the last Thursday of the month. For example a contract with the June 2022 expiration expires on the last Thursday of June 2022 (June 30, 2022).

Basic Structure of an Index Future

The Stock Index futures are instruments designed to give exposure to the equity markets indices. The Stock Exchange, Mumbai (BSE) and The National Stock Exchange (NSE) have trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short-term interest rates. Index futures are cash settled, there is no delivery of the underlying stocks.

Example using hypothetical figures:

1-month ABC Index Future

If the Scheme buys 2,000 futures contracts, each contract value is 50 times the futures index price.

Purchase Date	:	June 01, 2022
Spot Index	:	13800.00
Future Price	:	13900.00
Date of Expiry	:	June 30, 2022

Margin : 10%

Assuming the exchange imposes a total margin of 10%, the Investment Manager will be required to provide a total margin of approx. Rs. 1390,000,000 (i.e. $10\% \times 13900 \times 2000 \times 50$) through eligible securities and cash.

Assuming on the date of expiry, i.e. June 30, 2022, ABC Index closes at 13950, the net impact will be a profit of Rs. 5,000,000 for the Scheme, i.e. $(13950 - 13900) \times 2000 \times 50$ (Futures price = Closing spot price = Rs. 13950.00)

Profits for the Scheme = $(13950 - 13900) \times 2000 \times 50$ = Rs. 5,000,000.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity.

The net impact for the Scheme will be in terms of the difference of the closing price of the index and cost price. Thus, it is clear from the above example that the profit or loss for the Scheme will be the difference between the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mispricing of the futures.

Basic Structure of a Stock Future

A futures contract on a stock gives its owner the right and obligation to buy or sell stocks. Single Stock Futures traded on NSE (National Stock Exchange) are physically settled; on the expiration day, depending upon the side of the trade, security is either delivered or received against the payment. A purchase or sale of futures on a security gives the trader essentially the same price exposure as a purchase or sale of the security itself. In this regard, trading stock futures is no different from trading the security itself.

Example using hypothetical figures:

The Scheme holds shares of XYZ Ltd., the current price of which is Rs. 500 per share. The Scheme sells one month futures on the shares of XYZ Ltd. at the rate of Rs. 540.

If the price of the stock falls, the Mutual Fund will suffer losses on the stock position held. However, in such a scenario, there will be a profit on the short futures position.

At the end of the period, the price of the stock falls to Rs. 450 and this fall in the price of the stock results in a fall in the price of futures to Rs. 470. There will be a loss of Rs. 50 per share (Rs. 500 - Rs. 450) on the holding of the stock, which will be offset by the profits of Rs. 70 (Rs. 540 - Rs. 470) made on the short futures position.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins and other related costs have been ignored. The risks associated with stock futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mispricing of the futures.

2. Options

An option gives a person the right but not an obligation to buy or sell something. An option is a contract between two parties wherein the buyer receives a privilege for which he pays a fee (premium) and the seller accepts an obligation for which he receives a fee. The premium is the price negotiated and set when the option is bought or sold. A person who buys an option is said to be long in the option. A person who sells (or writes) an option is said to be short in the option.

An option contract may be of two kinds:

1) Call option

An option that provides the buyer the right to buy is a call option. The buyer of the call option can call upon the seller of the option and buy from him the underlying asset at the agreed price. The seller of the option has to fulfill the obligation upon exercise of the option.

2) Put option

The right to sell is called a put option. Here, the buyer of the option can exercise his right to sell the underlying asset to the seller of the option at the agreed price.

Option contracts are classified into two styles:

(a) European Style

In a European option, the holder of the option can only exercise his right on the date of expiration only.

(b) American Style

In an American option, the holder can exercise his right anytime between the purchase date and the expiration date.

Basic Structure of an Equity Option

In India, options contracts on indices and stocks are European style and physically settled

Example using hypothetical figures:

Market type	: N
Instrument Type	: OPTSTK
Underlying	: XYZ Ltd. (XYZ)
Purchase date	: June 1, 2022
Expiry date	: June 30, 2022
Option Type	: Put Option (Purchased)
Strike Price	: Rs. 5,750.00
Spot Price	: Rs. 5,800.00
Premium	: Rs. 200.00
Lot Size	: 100
No. of Contracts	: 50

Say, the Mutual Fund purchases on June 1, 2022, 1 month Put Options on XYZ Ltd. (XYZ) on the NSE i.e. put options on 5000 shares (50 contracts of 100 shares each) of XYZ.

If the share price of XYZ Ltd. falls to Rs. 5,500 /- on June 30, 2022 and the Investment Manager decides to exercise the option, the impact will be as Follows:

Premium Expense = Rs. 200 * 50 * 100 =
Rs. 10, 00,000/-

Stocks to be given at = Rs. 5,750/-

Profits for the Mutual Fund = $(5,750.00 - 5,500.00) * 50 * 100$
= Rs. 12, 50,000/-

Net Profit = Rs. 12, 50,000 - Rs. 10,00,000 = Rs. 2,50,000/-

In the above example, the Investment Manager hedged the market risk on 5000 shares of XYZ Ltd. by purchasing put options.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins have been ignored. The purchase of Put Options does not increase the market risk in the Mutual Fund as the risk is already in the Mutual Fund's portfolio on account of the underlying asset position (in his example shares of XYZ Ltd.). The Premium paid for the option is treated as an expense and added to the holding cost of the relevant security. Additional risks could be on account of illiquidity and potential mis-pricing of the options.
