Fundamental Research: The fund manager while selecting stocks will focus on the fundamentals of the business, the quality of management, the financial strength of the company, market leadership, etc.

Quantitative Approach: The quantitative approach emphasizes factors that offer insights into a company's growth prospects and valuation. These factors may act as a guiding framework and include factors such as Quality, Growth, Value.

Key sub-indicators may encompass metrics such as Return on Equity, Sales Growth, Cash Flow, Debt to Equity Ratio, Earnings Growth variability, Price to Book, Price to Earnings, and Dividend Yield, among others. G. HOW HAS THE SCHEME PERFORMED?

This scheme is a new scheme and does not have any performance track record

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

- (a) The Net Asset Value (NAV) of the scheme shall be calculated by determining the value of the scheme’s assets and subtracting therefrom the liabilities of the scheme taking into consideration the accruals and provisions. NAV shall be declared separately for the different Plans and Options of the scheme.
- (b) The NAV per unit of the scheme shall be calculated by dividing the NAV of the scheme by the total number of units issued and outstanding on the date of calculation under the scheme. The NAV shall be rounded off upto four decimal places for the scheme.

NAV of the Units under the Scheme shall be calculated as shown below:-

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto three decimal places or such other formula as may be prescribed by SEBI from time to time.

Methodology for Calculation of Sale and Re-purchase price of the units of mutual fund scheme

i) In case of Purchase of mutual fund units

As per existing regulation, no entry load is charged with respect to applications for purchase / additional purchase of mutual fund units. Therefore, Computation of Sale Price is as below:

NAV	10.00
Entry Load	Not Applicable
Sale Price	10.00

This also means, Sale Price = NAV as on date of investment

ii) Redemption/ Repurchase of mutual fund units

In case of redemption, repurchase price is calculated as below
 Repurchase Price = NAV as on date of redemption - exit load (if applicable)

iii) Illustration showing how repurchase price is calculated under 2 different scenarios-

Amount Invested- Rs.10,000/-
Date of Investment- 1st April 2022
NAV as on date of investment- Rs.10/- per unit
Exit load- For exit on or before 12 months from the date of allotment- 1%
 For exit after 12 months from the date of allotment- Nil
 No of units allotted at the time of purchase

$$= \frac{\text{Amount invested}}{\text{NAV of the scheme on the date of investment}}$$

$$= 10,000 / 10 = 1000 \text{ units}$$

Particulars	Scenario I	Scenario II
	Redemption during applicability of exit load	Redemption in case of Nil Exit load
Date of Redemption	On or before 31st March 2023	After 31st March 2023
NAV as on date of redemption	Rs. 12	Rs.12
Applicable Exit load	1%	Nil
Repurchase Price (NAV as on date of redemption-Exit load)	Rs.12 - (1-1%)	Rs.12- (Nil)
Repurchase Price on date of Redemption	Rs.11.88	Rs.12
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.11.88 x 1000	Rs.12 x 1000
	= Rs.11,880/-	Rs.12,000/-

Note - This is only for illustration purpose. Actual Exit load charged in the Scheme may vary.

The repurchase price shall not be lower than 95% of the NAV. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI

The above mentioned example does not take into consideration any applicable statutory levies and taxes.

- (c) A valuation day is a day other than (i) Saturday and Sunday (ii) a day on which both the stock exchanges (BSE and NSE) and the banks in Mumbai are closed (iii) A day on which the purchase and redemption of units is suspended. If any business day in UTI AMC, Mumbai is not a valuation day as defined above then the NAV will be calculated on the next valuation day and the same will be applicable for the previous business day's transactions including all intervening holidays.
- (d) The Mutual Fund shall declare the Net asset value separately for both the Plans by 11 p.m. on every business day on the website of UTI Mutual Fund, www.utimf.com and on AMFI's website www.amfiindia.com. The Mutual Fund shall prominently disclose the NAVs of the scheme under a separate head on the website and on the website of Association of Mutual Funds in India (AMFI). SECTION II

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION –

Please refer the below mentioned link for Definitions/ Interpretations:

<https://www.utimf.com/downloads/data-related-to-sid>

B. RISK FACTORS

Standard Risk Factors

1. Investment in Mutual Fund Scheme Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down.
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme.
4. The name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.10,000/- made by them towards setting up the Fund.
6. The present scheme is not a guaranteed or assured return scheme.
7. Statements/Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, Income Distribution cum Capital Withdrawal (IDCW) and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general markets conditions, factors and forces affecting capital market, in particular, level of interest rates, various markets related factors and trading volumes, settlement periods and transfer procedures.
10. **Credit Risk:** Bonds / debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit / default risk in view of the sovereign status of the issuer.
11. **Interest - Rate Risk:** Bonds / Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI, the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and the increase or decrease in the level of interest rates. The prices of Bonds / Government securities are also influenced by the liquidity in the financial system and / or the open market operations (OMO) by RBI.

Pressure on exchange rate of the rupee may also affect security prices. Such rise and fall in price of bonds / government securities in the portfolio of the scheme may influence the NAVs under the scheme as and when such changes occur.
12. **Liquidity Risk:** The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the scheme might have to incur a significant “impact cost” while transacting large volumes in a particular security.

13. **Securities Lending and Short Selling:** Securities lending is one of the means of earning additional income for the scheme with a lesser degree of risk. Securities lending is lending of Securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent Securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the Securities borrowed. As per provision no. 12.11.1 of para 12.11 under Chapter 12 of SEBI Master Circular for Mutual Funds “The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs).”

The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.

The Scheme may enter into short selling transactions in accordance with the guidelines prescribed by SEBI. The key risk to the Scheme is increase in the price of such securities, requiring the Scheme to purchase the securities sold short to cover the position even at unreasonable prices resulting in a loss to the Scheme.

14. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
15. Money Market Securities are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
16. **Investment in overseas markets:** The success of investment in overseas markets depends upon the ability of the fund manager to understand conditions of those markets and analyse the information which could be different from Indian markets. Operations in foreign markets would be subject to exchange rate fluctuation risk besides market risks of those markets.

17. Risk factors associated with investing in Fixed Income Securities

- a. Different types of fixed income securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Investments in corporate debt carry a higher level of risk than investments in Government securities. Further even among corporate debt, AAA/P1+ rated instruments are comparatively less risky than AA/P1 rated instruments. Accordingly, the Scheme risk may increase or decrease depending upon its investment pattern.
- b. The Net Asset Value (NAV) of the Scheme will be affected by changes in the general level of interest rates. The NAV of the Scheme is expected to increase from a fall in interest rates while it would be adversely affected by an increase in the level of interest rates.
- c. Money market instruments, while fairly liquid, lack a well developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- d. As zero coupon securities do not provide periodic interest payments to the holder of the security, these securities are more sensitive to changes in interest rates. Therefore, the interest rate risk of zero coupon securities is higher. The AMC may choose to invest in zero coupon securities that offer attractive yields. This may increase the risk of the portfolio. Zero coupon or deep discount bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specified date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face values. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the Issuer. The market prices of zero coupon securities are generally more volatile than the market prices of securities that pay interest periodically.
- e. Apart from normal credit risk, zero coupon bonds carry an additional risk, unlike bonds that pay interest throughout the period to maturity, zero coupon instruments/deferred interest bonds typically would not realise any cash until maturity. If the issuer defaults, the Schemes may not obtain any return on its investment.
- f. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to

- invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- g. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges and may lead to the Scheme incurring losses till the security is finally sold.
 - h. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments made by the Scheme. Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The NAV of the Units of the Scheme can go up or down because of various factors that affect the capital markets in general.
 - i. As the liquidity of the investments made by the Scheme could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for redemption of Units may be significant in the event of an inordinately large number of redemption requests or restructuring of the Scheme. In view of the above, the Trustee has the right, in its sole discretion, to limit redemptions (including suspending redemptions) under certain circumstances, as described under 'Right to Limit Redemptions' in Section 'Special Considerations', if any, on the right to freely retain or dispose of units being offered'.
 - j. At times, due to the forces and factors affecting the capital market, the Scheme may not be able to invest in securities falling within its investment objective resulting in holding the monies collected by it in cash or cash equivalent or invest the same in other permissible securities / investments amounting to substantial reduction in the earning capability of the Scheme.
 - k. The Scheme at times may receive large number of redemption requests, leading to an asset-liability mismatch and therefore, requiring the investment manager to make a distress sale of the securities leading to realignment of the portfolio and consequently resulting in investment in lower yield instruments.
 - l. Prepayment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
 - m. Reinvestment Risk: This risk refers to the interest rate levels at which cash flows received from the securities in the Schemes are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
 - n. Performance of the Scheme may be affected by political, social, and economic developments, which may include changes in government policies, diplomatic conditions, and taxation policies.
 - o. Investments in money market instruments involve credit risk commensurate with short term rating of the issuers.

18. Risk factors associated with investing in Foreign Securities:

Currency Risk:

Moving from Indian Rupee (INR) to any other currency entails currency risk. To the extent that the assets of the Scheme will be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by changes in the value of certain foreign currencies relative to the Indian Rupee.

Interest Rate Risk:

The pace and movement of interest rate cycles of various countries, though loosely co-related, can differ significantly. Hence by investing in securities of countries other than India, the Scheme stands exposed to their interest rate cycles.

Credit Risk:

Investment in Foreign Debt Securities are subject to the risk of an issuer's inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer. This is substantially reduced since the SEBI (MF) Regulations stipulate investments only in debt instruments with rating not below investment grade by accredited/registered credit rating agency.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

Country Risk:

The Country risk arises from the inability of a country, to meet its financial obligations. It is the risk encompassing economic, social and political conditions in a foreign country, which might adversely affect foreign investors' financial interests. In addition, country risks would include events such as introduction of extraordinary exchange controls, economic deterioration, bi-lateral conflict leading to immobilisation of the overseas financial assets and the prevalent tax laws of the respective jurisdiction for execution of trades or otherwise.

To manage risks associated with foreign currency and interest rate exposure, the Mutual Fund may use derivatives for efficient portfolio management including hedging and in accordance with conditions as may be stipulated by SEBI/ RBI from time to time.

19. Trading in debt and equity derivatives involves certain specific risks like:

- a. **Credit Risk:** This is the risk of default by the counter party. This is usually to the extent of difference between actual position and contracted position. This risk is substantially mitigated where derivative transactions happen through clearing corporation.
- b. **Market Risk:** Market movement may also adversely affect the pricing and settlement of derivative trades like cash trades.
- c. **Illiquidity Risk:** The risk that a derivative product may not be sold or purchased at a fair price due to lack of liquidity in the market.
- d. An exposure to derivatives can lead to losses. Success of dealing in derivatives depends on the ability of the Fund Manager to correctly assess the future market movement and in the event of incorrect assessment, if any, performance of the scheme could be lower.
- e. Interest Rate Swaps (IRSs) and Forward Rate Agreements (FRAs) do also have inherent credit and settlement risks. However, these risks are substantially less as they are limited to the interest stream and not the notional principal amount.
- f. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Notwithstanding such derivatives being used for limited purpose of hedging and portfolio balancing, the overall market in these segments could be highly speculative due to action of other participants in the market.
- g. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
- h. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

20. The aggregate value of "illiquid securities" of the scheme, which are defined by SEBI as non- traded, thinly traded and unlisted equity shares, shall not exceed 15% of the total assets of the scheme and any illiquid securities held above 15% of the total assets shall be assigned zero value.

21. In the event of receipt of inordinately large number of redemption requests or a restructuring of the schemes' portfolio, there may be delays in the redemption of units.

22. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. For e.g. Corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

23. Scheme specific risks factors

- a. Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities.
- b. The value of the investments in the scheme, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing

on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

- c. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the equity and equity related investments made by the Scheme which could cause the scheme to miss certain investment opportunities. Different segments of the financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The inability of the Scheme to make intended securities purchases due to settlement problems could also cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the scheme's portfolio.
- d. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- e. The Scheme may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives.
- f. The Scheme may also invest in ADRs / GDRs as permitted by Reserve Bank of India and Securities and Exchange Board of India. To the extent that some part of the assets of the scheme may be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee.
The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment.
- g. The scheme intends to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the scheme will be subject to credit risk as well as settlement risk, which might affect the liquidity of the scheme.

24. **Debt and Money Market securities investments under the scheme will also be subject to the following risks:**

- a. **Interest Rate Risk / Reinvestment Risk:** Scheme would manage the interest rate risk & reinvestment risk by adequately matching the duration of assets in line with the duration of the scheme.
- b. **Credit Risk:** Scheme would predominantly invest in highly rated securities where there is an internal credit comfort which would reduce the probability of credit risk.
- c. **Concentration Risk:** The scheme would have modest presence of issuers with reasonable limits which would mitigate the credit concentration risk.
- d. **Portfolio Risk:** By monitoring the return deviation and adequately managing all the above risks namely interest rate risk, reinvestment risk & credit cum concentration risk the scheme would mitigate the overall portfolio risk.

25. **Risks associated with investment in units of mutual fund:**

Investment in Mutual Fund Units involves investment risks, including but not limited to risks such as liquidity risk, volatility risk, default risk including the possible loss of principal.

Liquidity risk – The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees may limit redemptions (including suspending redemptions) under certain circumstances as specified under the Scheme Information Document.

Volatility risks: There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification across companies and sectors within PSUs.

Default risk - Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.

26. Risks associated with investing in ETFs:

ETFs are passively managed and may be affected by a general decline in the Indian markets relating to its Underlying Index. ETFs invests in the securities included in its Underlying Index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets.

ETFs are listed on a stock exchange/s, however, there can be no assurance that an active secondary market will develop or be maintained.

Investment in ETFs is subject to tracking error. Factors such as the fees and expenses of the Scheme, corporate actions, cash balance, changes to the Underlying Index and regulatory policies may affect the AMC's ability to achieve close correlation with the Underlying Index of the Scheme. The AMC will endeavour to constantly minimize the tracking error and track the index as closely as possible.

27. Risk factors of repo market**a. Illiquidity Risk**

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties. Therefore, to mitigate such risks, it has been stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

b. Counter-party Risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the schemes shall carry out repo transactions with only those counter parties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counter-party. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers.

Similarly, in the event of the scheme being unable to pay back the money to the counter party as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

c. Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security ('AA' for long-term instruments /A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

28. Risk factors associated with investments in REITs and InvITs –**VOLATILITY OF DISTRIBUTIONS**

The REITs & InvITs distributions will be based on the Net Distributable Cash Flows available for distribution, and not on whether the REITs & InvITs makes an accounting profit or loss. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things

- Economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
- Force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- Debt service requirements and other liabilities of the portfolio assets
- Fluctuations in the working capital needs of the portfolio assets
- Ability of portfolio assets to borrow funds and access capital markets
- Changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
- Amount and timing of capital expenditures on portfolio assets

- Insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents

OPERATIONAL AND RESIDUAL RISKS

- REIT & InvITs Assets are subject to various risks that we may not be insured against, adequately or at all, including:
 - (i) Changes in governmental and regulatory policies;
 - (ii) Shortages of, or adverse price movement for, materials, equipment and plants;
 - (iii) Design and engineering defects;
 - (iv) Breakdown, failure or substandard performance of the underlying assets and other equipments;
 - (v) Improper installation or operation of the underlying assets and other equipment;
 - (vi) Terrorism and acts of war;
 - (vii) Inclement weather and natural disasters;
 - (viii) Environmental hazards, including earthquakes, flooding, tsunamis and landslide
- Any additional debt financing or issuance of additional Units may have a material, adverse effect on the REITs & InvITs distributions.
- Any future issuance of Units by REITs & InvITs or sales of Units by the Sponsor or any of other significant Unitholders may materially and adversely affect the trading price of the Units.
- The Valuation Report, and any underlying reports, and the valuation contained therein may not be indicative of the true value of the Project SPVs' assets.
- Risk related to business or industry sector.
- There can be no assurance that REITs & InvITs will be able to successfully undertake future acquisitions.

Market Risk:

REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures.

Liquidity Risk:

As the liquidity of the investments made by the scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

Reinvestment Risk:

Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

Price-Risk or Interest-Rate Risk:

REITs & InvITs run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk:

In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.

RISK MITIGATION FACTORS:

The UTI Asset Management Company Ltd. (AMC) endeavours to invest in REITs/InvITs, where adequate due diligence and research has been performed by AMC. The AMC also relies on its own research as well as third party research. This involves one-to-one meetings with the managements,

attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the strength of management, predictability and certainty of cash flows, value of assets, capital structure, business prospects, policy environment, volatility of business conditions, etc.

29. Risks associated with Writing of Call Option Under a Covered Call Strategy

A call option gives the holder (buyer) the right but not the obligation to buy an asset by a certain date for a certain price. Covered calls are an options strategy where a person holds a long position in an asset and writes (sells) call options on that same asset to generate an income stream. The Scheme may write call options under covered call strategy, as permitted by the regulations. Risks associated thereto are mentioned below:

- i. Writing call options are highly specialized activities and entail higher than ordinary investment risks. In such investment strategy, the profits from call option writing is capped at the option premium, however the downside depends upon the increase in value of the underlying equity shares. This downside risk is reduced by writing covered call options.
- ii. The Scheme may write covered call option only in case it has adequate number of underlying equity shares as per regulatory requirement. This would lead to setting aside a portion of investment in underlying equity shares. If covered call options are sold to the maximum extent allowed by regulatory authority, the scheme may not be able to sell the underlying equity shares immediately if the view changes to sell and exit the stock.

The covered call options need to be unwound before the stock positions can be liquidated. This may lead to a loss of opportunity, or can cause exit issues if the strike price at which the call option contracts have been written become illiquid. Hence, the scheme may not be able to sell the underlying equity shares, which can lead to temporary illiquidity of the underlying equity shares and result in loss of opportunity.

iii. The writing of covered call option would lead to loss of opportunity due to appreciation in value of the underlying equity shares. Hence, when the appreciation in equity share price is more than the option premium received the scheme would be at a loss.

The total gross exposure related to option premium paid and received must not exceed the regulatory limits of the net assets of the scheme. This may restrict the ability of Scheme to buy any options.

30. Risk factors associated with Creation of Segregated Portfolio –

- a. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- b. Security comprises of segregated portfolio may not realise any value.
- c. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

31. Risk involved in imperfect hedging using Interest Rate Futures (IRFs)

With imperfect hedging, there is a risk that offsetting investments in a hedging strategy will not experience price changes in entirely same direction from each other. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.

For example, in the attempt to hedge interest rate risk of the scheme (diversified portfolio of various debt securities) with a modified duration of say 6 years, the fund manager takes a short position in 10 year IRF having a modified duration of 6 years. The risk is that price changes in IRF and the scheme portfolio may not move in the same direction or in the same proportion.

Numerical Example:

To understand risk associated with imperfect hedging let us look at the following illustration:

On Nov 1, 2022 the fund buys Rs. 100 Crs of 10 year Power Finance Co. (corporate bond) with a modified duration of 6 years from the spot market at a yield of 7.50% (Price: Rs. 100). Subsequently, it is anticipated that the interest rate will rise in the near future. Therefore, to hedge the exposure in underlying corporate bond, the fund sells Nov 2022, 10 year benchmark Interest Rate Futures at yield of 7.00% (Price: Rs. 98.50) having a modified duration of 6 years.

Let us assume the following two scenarios:

- (a) Both the securities experience price changes in the same direction:

On Nov 15, 2022 the corporate bond and government bond yields move up by 10 basis points (0.10%) on back of deteriorating macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest Rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Profit on short selling of Interest Rate Futures = Rs. 100 Crs * 0.10% * 6 = Rs. 60 Lacs

This allows the fund manager to hedge the portfolio against interest rate movement using Interest Rate Futures.

- (b) Securities experience price changes in the opposite direction:

On Nov 15, 2022 the corporate bond yield moves up by 10 basis points (0.10%) on back of higher supply of corporate bonds & the government bond yield fell by 5 bps due to improving macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Loss on short selling of Interest Rate Futures = Rs. 100 Crs * 0.05% * 6 = (Rs. 30 Lacs)

On certain instances like the one illustrated above, it is observed that the co-relation between the corporate bonds and government securities may not be perfect over a short period of time leading to imperfect hedging which may result in higher loss/ gain from the strategy. The likelihood of such instances being prevalent on a sustainable basis is expected to be minimal due to strong correlation between government securities & bond markets over the medium to long term.

32. Participation in repo in corporate debt securities

In accordance with Para 12.18 under chapter 12 of SEBI Master Circular on Mutual Funds read along with SEBI Circular no. SEBI/HO/IMD/POD-2/CIR/P /2023/0085 dated June 8, 2023 and SEBI Circular no. SEBI/HO/ IMD/IMD PoD-2/P/CIR/2023/87 dated June 13, 2023 on 'Participation of mutual funds in repo in corporate debt securities', the scheme shall participate in repo transactions in Corporate Debt Securities within the following overall framework, as per the guidelines of Securities and Exchange Board of India and Boards of UTI Trustee Co Pvt. Ltd & UTI Asset Management Company Limited:

(A) Eligibility

The scheme can participate in repos on following corporate debt securities:

- Listed AA and above rated corporate debt securities
- Commercial Papers (CPs) and Certificate of Deposits (CDs)

For the purpose of consideration of credit rating of exposure on repo transactions for various purposes including for Potential Risk Class (PRC) matrix, liquidity ratios, Risk-o-meter etc., the same shall be as that of the underlying securities, i.e., on a look through basis.

(B) Gross Exposure Norms

- (i) The gross exposure of any scheme to 'corporate bonds repo transactions' shall not be more than 10% of the net assets of the concerned scheme.
- (ii) The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs), and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.

(iii) For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits.

(C) Category of the counter-party to be considered for making investment

All entities eligible for transaction in corporate debt repos, as defined by Reserve Bank of India (RBI) and SEBI, shall be considered for repo transactions.

(D) Credit Rating of Counterparty to be considered for making investment

The scheme shall carry out repo transactions with only those counterparties, who have a credit rating of 'AA- and above' (Long term rating) or 'A1+' (Short term rating).

(E) Tenor of Repo

As a repo seller, the scheme can borrow for a period not more than six months as per the existing Regulation 44(2) of the SEBI (Mutual Funds) Regulations, 1996.

As a repo buyer, the scheme can lend for a maximum period of one year, subject to provision/s of the Scheme Information Document (SID).

(F) Tenor and Credit Rating of the Collateral

The scheme shall participate in repo transactions in Corporate `Bonds rated 'AA' and above ('A1+' in respect of money market instruments).

The tenor of the collateral shall not be more than 10 years.

(G) Minimum Haircut

In terms of RBI guidelines, repo transactions shall be subject to the following minimum haircuts:-

Rating of the Security	AAA	AA+	AA
Minimum Haircut	7.50%	8.50%	10%

The above are minimum stipulated haircuts where the repo period is overnight or where the re-margining frequency (in case of longer tenor repos) is daily. In all other cases, Fund Manager may adopt appropriate higher haircuts.

Depending on the market conditions and risk perceptions, the Fund Manager may seek higher haircut (while lending) or give a higher haircut (while borrowing).

(H) Risk factors and mitigation measures

(i) Illiquidity Risk

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties.

Therefore, to mitigate such risks, it has been stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

(ii) Counter-party Risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the scheme shall carry out repo transactions with only those counterparties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counter-party. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers.

Similarly, in the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

(iii) Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security ('AA' for long-term instruments / A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

33. Participating in Derivative Products:**Derivatives:**

A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, index, interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Derivatives are further classified into:-

Futures

Options

Swaps

Futures: A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Options:

An option is a derivative instrument, which gives its holder (buyer) the right but not the obligation to buy or sell the underlying security at the contracted price on or before the specified date. The purchase of an option requires an up-front payment (premium) to the seller of the option.

There are two basic types of options, call option and put option.

(a) Call option: A call option gives the buyer of the option the right but not the obligation to buy a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

(b) Put option: A put option gives the buyer of the option the right but not the obligation to sell a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

On expiry of a call option, if the market price of the underlying asset is lower than the strike price the call would expire unexercised. Likewise, if, on the expiry of a put option, the market price of the underlying asset is higher than that of the strike price the put option will expire unexercised.

The buyer/holder of an option can make loss of not more than the option premium paid to the seller/writer but the possible gain is unlimited. On the other hand, the option seller/writer's maximum gain is limited to the option premium charged by him from the buyer/holder but can make unlimited loss.

Swaps:

The exchange of a sequence of cash flows that derive from two different financial instruments. For example, the party receiving fixed in an ordinary Interest Rate Swap receives the excess of the fixed coupon payment over the floating rate payment. Of course, each payment depends on the rate, the relevant day count convention, the length of the accrual period, and the notional amount.

Debt derivatives are as of now customized over the counter products and there is no guarantee that these products will be available on tap. There are various possible combinations of strategies, which may be adopted, in a specific situation. The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day to day basis.

Some of the derivative techniques/ strategies that may be used are:-

(i) The scheme will use hedging techniques including dealing in derivative products – like futures and options, warrants, interest rate swaps (IRS), forward rate agreement (FRA) as may be permissible under SEBI (MF) Regulations.

- (ii) The scheme may take derivatives position based on the opportunities available and in line with the overall investment objective of the scheme. This may be taken to hedge the portfolio and rebalance the same.
- (iii) The Fund manager may use various strategies for trading in derivatives with a view to enhancing returns and taking cover against possible fluctuations in the market.
- (iv) The Fund Manager may sell the index forward by taking a short position in index futures to save on the cost of outflow of funds or in the event of negative view on the market.

34. Participation in Interest Rate Futures

Investment Norms:

To reduce interest rate risk in a debt portfolio, the scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio is as per the formula given below:

$$\text{(Portfolio Modified Duration * Market Value of the Portfolio) / (Futures Modified Duration * Futures Price / Par Value)}$$

At no point of time, the net modified duration of part of the portfolio being hedged shall be negative.

In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

Imperfect hedging using IRFs will be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to certain conditions such as exposure to IRFs is created only for hedging, the correlation between the portfolio and the IRF is atleast 0.9 etc. as prescribed in above mentioned SEBI circular.

35. Deployment of NFO Proceeds in Triparty Repo on government securities or treasury bill:

In terms of SEBI Circular No. SEBI/HO/IMD/DF2/CIR/P/2016/ 42 dated March 18, 2016, NFO proceeds may be deployed in Triparty Repo on government securities or treasury bill before the closure of NFO period. However, no investment management and advisory fees will be charged on funds deployed in Triparty Repo on government securities or treasury bills during the NFO period. Further, the appreciation received from investment in Triparty Repo on government securities or treasury bill shall be passed on to the investors. In case the minimum subscription amount is not garnered by the scheme during the NFO period, the interest earned upon investment of NFO proceeds in Triparty Repo on government securities or treasury bill shall be returned to investors, in proportion of their investments, alongwith the refund of the subscription amount.

- **REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK MITIGATION STRATEGIES:

The scheme may use various derivative products as permitted by the Regulations. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Primarily, derivatives including Interest Rate Futures would be used for purpose of hedging and portfolio balancing.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Risk indicators & internal limits are defined and judiciously monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigation measures.

Exposure limits as per provision no. 12.24.1 and 12.25.1 to 12.25.7 of para 12.24 and 12.25 under Chapter 12 of SEBI Master Circular for Mutual Funds:

- a. The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs), and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
- e. exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

Definition of Exposure in case of Derivative Positions:

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss.

Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

II. INFORMATION ABOUT THE SCHEME:

A. WHERE WILL THE SCHEME INVEST – Detailed description of the instruments mentioned in Section I

1. Investment in Money Market Instruments:

Investment in money market instruments including Triparty Repo on Government Securities or treasury bill, Commercial Papers, Certificate of Deposits, BRDS, Treasury Bills, Repo, etc. will be made to meet the liquidity needs of the scheme and manage desired duration as permitted by SEBI and RBI from time to time.

2. Debt and Money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	: Stated value of the paper / Principal Amount
Coupon	: Zero; fixed or floating
Frequency	: Semi-annual; annual, sometimes quarterly
Maturity	: Bullet, staggered
Redemption	: FV; premium or discount
Options	: Call/Put
Issue Price	: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on Government Securities or treasury bill etc. They are mostly discounted instruments that are issued at a discount to face value.

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers). The Central Government securities are generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

(iii) Regulators: The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained primarily a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(v) Types of Security Issuances and Eligible Investors

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, G-Sec trades are primarily routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in Government Securities owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

Note:

- 1) *If the EUIN is invalid/missing, the transactions shall be processed in Regular plan, and the distributor/investor shall be given 30 day period from the date of the transaction for remediation of the EUIN. In such cases, the investor to be advised to either provide a different EUIN linked to the ARN who would be engaged in servicing the investor OR switch to Direct Plan. The commission shall not be paid to the ARN holder if the Switch transaction does not happen, or fresh EUIN is not provided within 30 days. The commission may be paid if the fresh EUIN is provided by client within 30 days.
- 2) For SIP & STP facilities, the ARN validity shall be verified / validated at the time of registration. For instances where the registration details not available in RTA records the transaction shall be treated as lumpsum purchase for validations. Distributors must reconcile the active / inactive SIPs with RTA's at regular intervals
- 3) SIPs registered under ARN of deceased to continue till end of SIP registration period or investor's request as per AMFI guidelines; No fresh transactions or SIPs to be booked under the ARN of deceased MFD post cancellation of ARN at AMFI.
- 4) Only Sub-distributor's ARN with valid "ARN" values in the transaction will be considered for validation of Sub- distributor ARN for all types of transactions (lumpsum/SIP/STP).

- 6) Transactions other than the physical mode which are found to be not in order basis above matrix, will be rejected at the time of upload / submission for following reasons:
 - a. To give opportunity for the intermediary / platform to rectify details before submitting transactions or to report transactions as DIRECT.
 - b. If these transactions are accepted and processed as DIRECT, the intermediary placing the transaction will not be receiving reverse feeds and hence will not be able to reconcile.

Since the validation cannot be carried out at the time of acceptance or transactions received in physical form, the same will be done at the time of processing the transaction, and if found to be invalid, the transaction will be processed under DIRECT.
- 7) Transactions received from the stock exchange platforms in Demat mode with invalid ARN shall be rejected instead of processing in Direct Plan for following reasons
 - a. Settlement of units will fail at clearing corporation due to mismatch of ISIN.
 - b. If the RTA processes the transaction in DIRECT Plan, the AMC will face issues with corporate action wherein the clearing corporation will not be able to reconcile and credit the units.
 - c. The distributor/broker will not be able to download the reverse feed/mail back report for the transactions reported by the respective distributor in case if we process under Direct Plan.

FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant.</p> <p>FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts.</p> <p>The identification of US person will be based on one or more of following “US indicia”-</p> <ul style="list-style-type: none"> • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. <p>FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws.</p> <p>FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously.</p>

	<p>In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date.</p> <p>Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information</p> <p>On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI).</p> <p>All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form.</p> <p>AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above.</p> <p>Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to SEBI Circular Nos.
