Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date. The Fund shall value its investments according to the valuation norms, as specified in Seventh Schedule of the Regulations, or such norms as may be prescribed by SEBI from time to time.

All expenses and incomes accrued up to the valuation date shall be considered for computation of NAV. For this purpose, major expenses like management fees and other periodic expenses would be accrued on a day to day basis. The minor expenses and income will be accrued on a periodic basis, provided the nondaily accrual does not affect the NAV calculations by more than 1%.

Any changes in securities and in the number of units be recorded in the books not later than the first valuation date following the date of transaction. If this is not possible given the frequency of the Net Asset Value disclosure, the recording may be delayed upto a period of seven days following the date of the transaction, provided that as a result of the non-recording, the Net Asset Value calculations shall not be affected by more than 1%.

In case the Net Asset Value of a scheme differs by more than 1%, due to non - recording of the transactions, the investors or scheme/s as the case may be, shall be paid the difference in amount as follows:-

(i) If the investors are allotted units at a price higher than Net Asset Value or are given a price lower than Net Asset Value at the time of sale of their units, they shall be paid the difference in amount by the scheme.

(ii) If the investors are charged lower Net Asset Value at the time of purchase of their units or are given higher Net Asset Value at the time of sale of their units, asset management company shall pay the difference in amount to the scheme. The asset management company may recover the difference from the investors.

NAV of units under the Scheme shall be calculated as shown below:

NAV (Rs.) =

Market or Fair Value of Scheme's investments	+	Current Assets including Accrued Income	-	Current Liabilities and Provisions including accrued expenses

No. of Units outstanding under Scheme

The NAV of the Scheme will be calculated upto two decimal places and will be declared on each business day. The valuation of the Scheme's assets and calculation of the Scheme's NAV shall be subject to audit on an annual basis and shall be subject to such regulations as may be prescribed by SEBI from time to time.

Illustration:

Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs. 25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000. Thus, the NAV will be calculated as:

$$NAV = \frac{10000000 + 2500000 - 1500000}{500000} = 22.0000$$

Therefore, the NAV of the scheme is Rs. 22.0000

Methodology of calculating the sale price:

The price or NAV an investor is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to para 11.7.1of the SEBI Master Circular for Mutual Funds dated March 20, 2026, no entry load will be charged by the Scheme to the investors.

Sale / Subscription Price = Applicable NAV

Methodology of calculating the repurchase price:

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the investors. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Asset Value (NAV);i.e.,applicable load as a percentage of NAV will be deducted from the applicable NAV to calculate the repurchase price.

Repurchase / Redemption Price = Applicable NAV *(1 –Exit Load, if any)

For example, if the applicable NAV of the scheme is Rs. 10 and the exit load applicable at the time of investmentis 1% if redeemed before completion of 1year from the date of allotment of units and the investor redeems units before completion of 1 year, then the repurchase/redemption price will be:

Redemption Price= Rs. 10*(1-0.01) = Rs. 9.90

While determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 97 per cent of the Net Asset Value.

Valuation of the scheme's assets, calculation of the scheme's NAV and the accounting policies & standards will be subject to such norms and guidelines that SEBI may prescribe from time to time. For the detailed

Valuation Policy and the accounting policy of the AMC, please refer the Statement of Additional Information.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

B. NEW FUND OFFER (NFO) EXPENSES

These expenses are incurred for the purpose of various activities related to the NFO like sales and distribution fees paid marketing and advertising, registrar expenses, printing and stationary, bank charges etc. All initial issue expenses pertaining to NFO till the date of allotment of unit will be borne by the AMC or trustee or sponsor. No NFO expenses were charged to the Scheme.

C. ANNUAL SCHEME RECURRING EXPENSES

These are the fees and expenses for operating the Scheme. These expenses include, inter alia, the Investment

Management and Advisory Fee charged by the AMC, Registrar and Transfer Agent's fee, marketing and selling expense and other permissible expense, as detailed in the table below:

The AMC has estimated that expenses upto 0.90% of the daily net assets of the scheme may be charged to the scheme as expense.. For the actual current expenses being charged, the investor are requested to refer to the website of the Mutual Fund at https://www.growwmf.in/downloads/expense-ratio.

B. Risk factors

me of the specific risk factors related to the Scheme include, but are not limited to the following:

• As the investors are incurring expenditure at both the Fund of Funds level and the scheme into which the Fund of Funds invests, the returns that they may obtain may be materially impacted or may at times be lower than the returns that investors may obtains by directly investing in such schemes.

• As the Fund of Funds scheme will invest into an underlying scheme, the expense charged being dependent on the structure of the underlying scheme (being different), it may lead to a non- uniform charging of expenses over a period of time.

• In the Fund of Funds (FOF) factsheets and disclosures of portfolio will be limited to providing the particulars of the schemes invested at FOF level, thus investors may not be able to obtain specific details of the investments of the underlying schemes.

• The fund of funds scheme may have different returns/performance than the underlying scheme due to various reasons. The return of the Fund of Funds may be adversely impacted by Total expense ratio, cash drag, timing and pricing difference b/w the subscription/redemption in the Fund of Funds v/s underlying scheme, operational and transactional reasons etc.

• The scheme specific risk factors of the underlying schemes become applicable where a fund of funds invest. Investors who intend to invest in Fund of Funds are required to and are deemed to have read and understood the risk factors of the underlying scheme in which Fund of Funds scheme invest in. Copies of the Scheme Information Documents pertaining to the various schemes of Groww Mutual Fund, which disclose the relevant risk factors, are available at the Investor/Customer Service Centres or may be accessed at https://www.growwmf.in/downloads/sid

• The FOF may invest in the underlying ETF through stock exchange, where market price of underlying ETF may be different from its NAV. This may affect the performance of the scheme.

• The subscription and redemption in FOF is also dependent on the liquidity of the underlying scheme. The illiquidity of the same may affect the performance of the FOF.
• A Fund Manager managing the Fund of Funds scheme may also be the Fund Manager for any underlying schemes.

The scheme specific risk factors of each of the underlying schemes become applicable where a fund of funds invests in any underlying scheme. Investors who intend to invest in fund of funds are required to and are deemed to have read and understood the risk factors of the underlying schemes relevant to the Fund of Funds scheme that they invest in. The Scheme will be subject to risks related to fluctuations in collateral value/settlement, liquidity and counter party related risk

Risks associated with ADR / GDR / Foreign Securities:
• The scheme will not have any exposure to ADR / GDR / Foreign Securities.

Risks associated with Securitized Debt
• The scheme will not have any exposure to Securitized debt.

Risks associated with Short Selling and Securities Lending

• Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed.
In case the Scheme undertakes stock lending as prescribed in the Regulations, it may, at times be exposed to counter party risk and other risks associated with the securities lending. Unitholders of the Scheme should note that there are risks inherent to securities lending, including the risk of failure of the other party, in this case the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure can result in the possible loss of rights to the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities lent. The Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

The scheme does not intend to short sell the securities.

Risks Associated with Debt & Money Market Instruments

• Price-Risk or Interest-Rate Risk: Fixed income securities such as bonds, debentures and money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

• Credit Risk: In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.

• Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

• Reinvestment Risk: Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

• Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

• Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

• Different types of securities in which the scheme would invest as given in the SID carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g.

corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

Risks associated with segregated portfolio

• Investor holding units of segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.

• Security comprises of segregated portfolio may not realize any value.

• Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

Risks associated with investing in Tri-Party Repo through CCIL (TREPS)

The mutual fund is a member of securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Triparty Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. CCIL maintains prefunded resources in all the clearing segments to cover potential losses arising from the default member. In the event of a clearing member failing to honor his settlement obligations, the default Fund is utilized to complete the settlement. The sequence in which the above resources are used is known as the "Default Waterfall". As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution if there is a residual loss, it is appropriated from the default fund contributions of the non-defaulting members. Thus the scheme is subject to risk of the initial margin and default fund contribution being invoked in the event of failure of any settlement obligations. In addition, the fund contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member). However, it may be noted that a member shall have the right to submit resignation from the membership of the Security segment if it has taken a loss through replenishment of its contribution to the default fund for the segments and a loss threshold as notified have been reached. The maximum contribution of a member towards replenishment of its contribution to the default fund in the 7 days (30 days in case of securities segment) period immediately after the afore-mentioned loss threshold having been reached shall not exceed 5 times of its contribution to the Default Fund based on the last re-computation of the Default Fund or specified amount, whichever is lower. Further, it may be noted that, CCIL periodically prescribes a list of securities eligible for contributions as collateral by members. Presently, all Central Government securities and Treasury bills are accepted as collateral by CCIL. The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral."

The underlying schemes having exposure to the fixed income securities and/ or equity and equity related securities will be subject to the following risks and in turn the Scheme's/ Plans' performance will be affected accordingly.

Risks associated with investing in underlying schemes

The scheme specific risk factors of the underlying schemes become applicable where a fund of funds invests. Investors who intend to invest in Fund of Funds are required to and are deemed to have read and understood the risk factors of the underlying scheme in which the Fund of Funds scheme invest in. Copies of the Scheme Information Documents pertaining to the various schemes of Groww Mutual Fund, which disclose the relevant risk factors, are available at the Customer Service Centers or may be accessed at https://www.growwmf.in/downloads/sid

Risks Associated with Equity Investments:

• Equity and equity related securities are volatile and prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted by trading volumes and settlement periods. Settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio would result at times, in potential losses to the Scheme,

should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, changes in law/ policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors.

• Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.

• Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

Risks associated with Tracking errors/ difference of underlying Scheme:

Tracking error means the extent to which the NAV of the fund moves in a manner inconsistent with the movements of the benchmark index on any given day or over any given period of time due to any cause or reason whatsoever including but not limited to expenditure incurred by the scheme, IDCW payouts if any, whole cash not invested at all times as it may keep a portion of funds in cash to meet redemption etc. The tracking error i.e. the annualized standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the Scheme based on daily past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any. However, the Fund will endeavour to limit the tracking error within 2% limits. Tracking difference is the difference of return between the scheme and benchmark annualized over 1 year, 3 year, 5 years, 10 years and since inception period.

Tracking error/ difference could be the result of a variety of factors including but not limited to:

• Delay in the purchase or sale of units within the benchmark due to o Illiquidity in the stocks, circuit filters on the units

• Delay in realisation of sale proceeds

• The scheme may buy or sell the units of ETF at different points of time during the trading session at the then prevailing prices which may not correspond to its closing prices.

• • The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses.

• Disinvestments to meet redemptions, recurring expenses, payouts of IDCW etc.

• Execution of large buy / sell orders

• Delay in credit of securities

• Transaction cost and recurring expenses

• Delay in realisation of Unit holders' funds

• Levy of margins by exchanges

SEBI / other Regulatory restrictions on investments and/ or divestments by the scheme / Mutual Fund, which are outside the control of AMC, which may further cause / impact the tracking error.

Risks Associated with Derivatives of underlying Scheme:

The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional instruments. Such risks include mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Trading in derivatives carries a high degree of risk although they are traded at a relatively small amount of margin which provides the possibility of great profit or loss in comparison with the principal investment amount. The options buyer's risk is

limited to the premium paid, while the risk of an options writer is unlimited. However the gains of an options writer are limited to the premiums earned. The writer of a call option bears a risk of loss if the value of the underlying asset increases above the exercise price. The loss can be unlimited as underlying asset can increase to any levels. The writer of a put option bears the risk of loss if the value of the underlying asset declines below the exercise price and the loss is limited to strike price.
Investments in futures face the same risk as the investments in the underlying securities. The extent of loss is the same as in the underlying securities. However, the risk of loss in trading futures contracts can be substantial, because of the low margin deposits required, the extremely high degree of leverage involved in futures pricing and the potential high volatility of the futures markets. The derivatives are also subject to liquidity risk as the securities in the cash markets. The derivatives market in India is nascent and does not have the volumes that may be seen in other developed markets, which may result in volatility in the values.

C. RISK MITIGATION MEASURES FOR UNDERLYING SCHEMES

Liquidity Risk
As such the liquidity of stocks that the fund invests into could be relatively low. The fund will try to maintain a proper asset-liability match to ensure redemption / Maturity payments are made on time and not affected by illiquidity of the underlying stocks.

Risks Associated with Equity Investments: The scheme has a diversified portfolio to counter the volatility in the prices of individual stocks. Diversification in the portfolio reduces the impact of high fluctuations in daily individual stock prices on the portfolio.

Risks Associated with Debt & Money Market Instruments

Credit Risk - The fund has a rigorous credit research process. There is a regulatory and internal cap on exposure to each issuer. This ensures a diversified portfolio and reduced credit risk in the portfolio.
While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

• The FOF will invest in ETF, which in cumulation will endeavors to have a diversified equity portfolio comprising stocks across various sectors of the economy to reduce sector specific risks. All the underlying ETF scheme related risk factors will apply to the Fund of Fund.
• Any investments in debt securities would be undertaken after assessing the associated credit risk, interest rate risk and liquidity risk.

The Scheme will also invest in debt securities and money market instruments.

• The credit quality of the portfolio will be maintained and monitored using in-house research capabilities as well as inputs from external sources such as independent credit rating agencies.
• The investment team will primarily use a top down approach for taking interest rate view, sector allocation along with a bottom up approach for security/instrument selection.
• The bottom up approach will assess the quality of security/instrument (including the financial health of the issuer) as well as the liquidity of the security.
• Investments in debt instruments carry various risks such as interest rate risk, reinvestment risk, credit risk and liquidity risk etc. Whilst such risks cannot be eliminated, they may be minimized through diversification.

Risk is an inherent part of the investment function. Effective risk management is critical to fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objective of the Scheme and provisions of SEBI (MF) Regulations. AMC has incorporated adequate safeguards to manage risk in

the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools like but not limited to calculating risk ratios, tracking error etc. The AMC has implemented Quantis as the Front Office and Settlement System (FOS). The system has incorporated all the investment restrictions as per SEBI guidelines and "soft" warning alerts at appropriate levels for pre-emptive monitoring. The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same so as to act in a preventive manner.

The risk control measures for managing the debt portion of the scheme are:
1. Monitoring risk adjusted returns performance of the fund with respect to its peers and its benchmark.

2. Tracking analysis of the fund on various risk parameters undertaken by independent fund research / rating agencies or analysts and take corrective measures if needed.

3. Credit analysis plays an important role at the time of purchase of bond and then at the time of regular performance analysis. Our internal research anchors the credit analysis. Sources for credit analysis include Capital Line, CRISIL, ICRA updates etc. Debt ratios, financials, cash flows are analyzed at regular intervals to take a call on the credit risk.

4. We define individual limits for G-Sec, money market instruments, MIBOR linked debentures and corporate bonds exposure, for diversification reasons.

The Scheme does not propose to underwrite issuances of securities of other issuers. There will be no exposure to securitized debt securities in the portfolio.

Portfolio Turnover Policy

Portfolio Turnover measures the volume of trading that occurs in a Scheme's portfolio during a given time period. The Scheme is an open-ended Exchange Traded Fund and it is expected that there may be a number of subscriptions and repurchases on a daily basis through Stock Exchange(s) or Market Maker and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition, if any, and corporate actions of securities included in Nifty Capital Markets Index. However, it will be the endeavour of the Fund Manager to maintain an optimal portfolio turnover rate commensurate with the investment objective of the Scheme and the purchase/ redemption transactions on an ongoing basis in the Scheme.
