Note 1: Investments in Short Term Deposits:

		Pending deployment of funds of the Scheme, the AMC may invest funds of the Scheme in short-term deposits of scheduled commercial banks, subject to the following conditions issued by SEBI vide clause 12.16 of SEBI Master Circular: 1. “Short Term” for parking of funds shall be treated as a period not exceeding 91 days. 2. Such short-term deposits shall be held in the name of the Scheme. 3. The Scheme shall not park more than 15% of their net assets in the short term deposit(s) of all the scheduled commercial banks put together. However, it may be raised to 20% with the prior approval of the Trustee. Also, parking of funds in short term deposits of associate and sponsor scheduled commercial banks together shall not exceed 20% of total deployment by the Mutual Fund in short term deposits. 4. The Scheme shall not park more than 10% of their net assets in short term deposit(s) with any one scheduled commercial bank including its subsidiaries. 5. The Trustee shall ensure that the funds of the Scheme are not parked in the short term deposits of a bank which has invested in the Scheme. 6. The Trustee shall also ensure that the bank in which a scheme has short term deposits do not invest in the scheme until the scheme has short term deposits with such bank. 7. AMC will not charge any investment management and advisory fees for parking of funds in short term deposits of scheduled commercial banks. The above provisions do not apply to term deposits placed as margins for trading in cash and derivative market. The underlying index shall comply with the below restrictions in line with clause 3.4 of SEBI Master circular: a) The index shall have a minimum of 10 stocks as its constituents. b) For a sectoral/ thematic Index, no single stock shall have more than 35% weight in the index. For other than sectoral/ thematic indices, no single stock shall have more than 25% weight in the index. c) The weightage of the top three constituents of the index, cumulatively shall not be more than 65% of the Index. d) The individual constituent of the index shall have a trading frequency greater than or equal to 80% and an average impact cost of 1% or less over previous six months. The net assets of the scheme will be invested in stocks constituting Nifty Midcap 150 Index. This would be done by investing in all the stocks comprising the Nifty Midcap 150 Index in the same weightage that they represent in the Nifty Midcap 150 Index. A small portion of the net assets will be invested in Cash and Cash Equivalents. Index futures/options are meant to be an efficient way of buying/selling an index compared to buying/selling a portfolio of physical shares representing an index for ease of execution and settlement. It can help in reducing the Tracking Error in the Scheme. Index futures/options may avoid the need for trading in individual components of the index, which may not be possible at times, keeping in mind the circuit filter system and the liquidity in some of the individual stocks. Equity Derivatives can be used as a tool for cash equitization and where the fund has got cash (within the maximum permissible asset allocation table), in case where rebalance comes, then instead of cash, index contract can be used for temporary basis. Index futures/options can also be helpful in reducing the transaction costs and the processing costs on account of ease of execution of one trade compared to several trades of shares comprising the underlying index and will be easy to settle compared to physical portfolio of shares representing the underlying index. In case of investments in index futures/options, the risk/reward would be the same as investments in portfolio of shares representing an index. However, there may be a cost attached to

buying an index future/option. The Scheme will not maintain any leveraged or trading positions.

In accordance with clause 12.11 of SEBI Master Circular, the Scheme will not generally deploy more than 20% of its net assets in stock lending and not more than 5% of its net assets through a single intermediary (i.e the limit of 5% will be at broker level).

Timelines for deployment of funds collected in NFO

In line with SEBI circular no. SEBI/HO/IMD/IMD-PoD-1/P/CIR/2025/23 dated February 27, 2025, deployment of the funds garnered in an NFO shall be made within 30 business days from the date of allotment of units.

In an exceptional case, if the AMC is not able to deploy the funds in 30 business days, reasons in writing, including details of efforts taken to deploy the funds, shall be placed before the Investment Committee.

The Investment Committee, after examining the root cause for delay may extend the timeline by 30 business days.

Calculation of gross exposure:

As per clause 12.24 of SEBI Master Circular, the cumulative gross exposure through equity, derivative position and other permitted securities/ asset class as may be permitted by the Board from time to time subject to regulatory approvals, if any shall not exceed 100% of the net assets of the scheme. Cash and cash equivalents as per SEBI letter no. SEBI/HO/ IMD-II/DOF3/ OW/P/ 2021/ 31487 / 1 dated November 03, 2021 which includes T-bills, Government Securities, Repo on Government Securities and any other securities as may be allowed under the regulations prevailing from time to time subject to the regulatory approval, if any, having residual maturity of less than 91 Days, shall not be considered for the purpose of calculating gross exposure limit

Numerical example of risk involved

1. **Futures**

A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Currently, futures contracts have a maximum expiration cycle of 3 months. Three contracts are available for trading, with 1 month, 2 months and 3 months expiry respectively. A new contract is introduced on the next trading day following the expiry of the relevant monthly contract. Futures contracts typically expire on the last Thursday of the month. For example a contract with the June 2022 expiration expires on the last Thursday of June 2022 (June 30, 2022).

Basic Structure of an Index Future

The Stock Index futures are instruments designed to give exposure to the equity markets indices. The Stock Exchange, Mumbai (BSE) and The National Stock Exchange (NSE) have trading in index futures of 1, 2 and 3 month maturities. The pricing of an index future is the function of the underlying index and short-term interest rates. Index futures are cash settled, there is no delivery of the underlying stocks.

		Example using hypothetical figures to understand risk & returns from trading in derivative futures: **1-month ABC Index Future** If the Scheme buys 2,000 futures contracts, each contract value is 50 times the futures index price. ¤ Purchase Date : June 01, 2022 ¤ Spot Index : 13,800.00 ¤ Futures Price : 13,900.00 ¤ Date of Expiry : June 30, 2022 ¤ Number of Futures Contracts: 2,000 ¤ Contract Value: 50 × Futures Index Price ¤ Total Margin Requirement: 10% × 13,900 × 2,000 × 50 = ₹1,390,000,000 (provided in eligible securities and/or cash) Assuming the exchange imposes a total margin of 10%, the Investment Manager will be required to provide a total margin of approx. Rs. 1390,000,000 (i.e. 10%*13900*2000*50) through eligible securities and cash. Assuming on the date of expiry, i.e. June 30, 2022, 1. ABC Index closes at 13950, the net impact will be a profit of Rs. 5,000,000 for the Scheme, i.e. futures expiry prices reduced by futures purchase price i.e. (13950-13900)*2000*50 Profits for the Scheme = (13950-13900) * 2000*50 = Rs. 5,000,000. 2. Alternatively, If the closing index price on expiry is 13,850 instead, the Scheme will incur losses, i.e. futures purchase prices reduced by futures expiry price i.e. (13,850 – 13,900)* 2,000*50 Loss for the scheme = –₹5,000,000 loss. (Futures price = Closing spot price = Rs. 13950.00) Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. The net impact for the Scheme will be in terms of the difference of the closing price of the index and cost price. Thus, it is clear from the above example that the profit or loss for the Scheme will be the difference between the closing price (which can be higher or lower than the purchase price) and the purchase price. The risks associated with index futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures. **Basic Structure of a Stock Future** A futures contract on a stock gives its owner the right and obligation to buy or sell stocks. Single Stock Futures traded on NSE (National Stock Exchange) are physically settled; on the expiration day, depending upon the side of the trade, security is either delivered or received against the payment. A purchase or sale of futures on a security gives the trader essentially the same price exposure as a purchase or sale of the security itself. In this regard, trading stock futures is no different from trading the security itself. Example using hypothetical figures: The Scheme holds shares of XYZ Ltd., the current price of which is Rs. 500 per share. The Scheme sells one month futures on the shares of XYZ Ltd. at the rate of Rs. 540.

If the price of the stock falls, the Mutual Fund will suffer losses on the stock position held. However, in such a scenario, there will be a profit on the short futures position.

At the end of the period, the price of the stock falls to Rs. 450 and this fall in the price of the stock results in a fall in the price of futures to Rs. 470. There will be a loss of Rs. 50 per share (Rs. 500 - Rs. 450) on the holding of the stock, which will be offset by the profits of Rs. 70 (Rs. 540 - Rs. 470) made on the short futures position.

Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins and other related costs have been ignored. The risks associated with stock futures are similar to those associated with equity investments. Additional risks could be on account of illiquidity and potential mis-pricing of the futures.

2. Options

An option gives a person the right but not an obligation to buy or sell something. An option is a contract between two parties wherein the buyer receives a privilege for which he pays a fee (premium) and the seller accepts an obligation for which he receives a fee. The premium is the price negotiated and set when the option is bought or sold. A person who buys an option is said to be long in the option. A person who sells (or writes) an option is said to be short in the option.

An option contract may be of two kinds:

1) **Call option**
   An option that provides the buyer the right to buy is a call option. The buyer of the call option can call upon the seller of the option and buy from him the underlying asset at the agreed price. The seller of the option has to fulfill the obligation upon exercise of the option.

2) **Put option**

   The right to sell is called a put option. Here, the buyer of the option can exercise his right to sell the underlying asset to the seller of the option at the agreed price.
   Option contracts are classified into two styles:
   (a) European Style
      In a European option, the holder of the option can only exercise his right on the date of expiration only.
   (b) American Style
      In an American option, the holder can exercise his right anytime between the purchase date and the expiration date.

Basic Structure of an Equity Option
In India, options contracts on indices and stocks are European style and physically settled

		Strike Price : Rs. 5,750.00 Spot Price : Rs. 5,800.00 Premium : Rs. 200.00 Lot Size : 100 No. of Contracts : 50 Say, the Mutual Fund purchases on June 1, 2022, 1 month Put Options on XYZ Ltd. (XYZ) on the NSE i.e. put options on 5000 shares (50 contracts of 100 shares each) of XYZ. If the share price of XYZ Ltd. falls to Rs. 5,500 /- on June 30, 2022 and the Investment Manager decides to exercise the option, the impact will be as Follows: Premium Expense = Rs. 200 * 50 * 100 = Rs. 10, 00,000/- Stocks to be given at = Rs. 5,750/- Profits for the Mutual Fund= (5,750.00-5,500.00)*50*100 = Rs. 12, 50,000/- Net Profit = Rs. 12, 50,000 - Rs. 10,00,000 = Rs. 2,50,000/- In the above example, the Investment Manager hedged the market risk on 5000 shares of XYZ Ltd. by purchasing put options. **Loss Scenario –** **1. Option Expires Worthless** If on June 30, 2022, XYZ Ltd. closes at **₹5,760** or higher: • The put option will have no intrinsic value (because market price > strike price). • The Mutual Fund will **not exercise** the option. • **Total Loss = Premium Paid = ₹10,00,000**. **2. Price Falls, But Not Enough to Cover Premium** If on expiry the stock closes at **₹5,700**: • Intrinsic Value per share = ₹5,750 – ₹5,700 = ₹50 • Total Gain from Option = ₹50 × 50 × 100 = ₹2,50,000 • Net Result = ₹2,50,000 – ₹10,00,000 = -₹7,50,000 Loss Please note that the above example is given for illustration purposes only. Some assumptions have been made for the sake of simplicity. Certain factors like margins have been ignored. The purchase of Put Options does not increase the market risk in the Mutual Fund as the risk is already in the Mutual Fund's portfolio on account of the underlying asset position (in his example shares of XYZ Ltd.). The Premium paid for the option is treated as an expense and added to the holding cost of the relevant security. Additional risks could be on account of illiquidity and potential mis-pricing of the options. **Exposure to Equity Derivatives:** **i. Position limit for the Mutual Fund in index options contracts:** At each PAN level, derivative exposure for Mutual Funds are capped at: Net End-of-Day FutEq OI: ₹1,500 crore Gross End-of-Day FutEq OI (long + short): ₹10,000 crore Future Equivalent open interest (FutEq OI) is Gross addition of such net Delta adjusted open positions **ii. Or 5% of the open interest in the derivative contracts on a particular underlying stock (in terms of number of contracts). b. This position limit shall be applicable on the combined position in all derivative contracts on a underlying stock at a Stock Exchange. c. For index based contracts, the Mutual Fund shall disclose the total open interest held by its scheme or all schemes put together in a particular underlying index, if such open interest equals to or exceeds 15% of the open interest of all derivative contracts on that underlying index. The aforementioned limits are indicative, and Investors may refer to the circular SEBI/HO/MRD/TPD-1/P/CIR/2025/79 dated May 29, 2025 or subsequent circular as issued by SEBI from time to time on the topic to better apprehend and understand various definitions and limits applicable. As and when SEBI notifies amended limits or methodology for restricting position limits for exchange traded derivative contracts in future, the aforesaid position limits or methodology, to the extent relevant, shall be read as if they were substituted with the SEBI amended limits or methodology. **<u>Disclosure relating to extent and manner of participation in derivatives to be provided</u>** Exposure to equity derivatives of the index itself or its constituent stocks may be undertaken when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions. Exposure to such derivatives will be restricted to 20% of net assets of the scheme. However, investment in derivatives will be for a temporary period on defensive considerations. The Scheme shall rebalance the portfolio in case of any deviation to the asset allocation. Such rebalancing shall be done within 7 calendar days from the date of such deviation. Investment in derivatives shall be made in accordance with clause 12.25 of SEBI Master Circular, SEBI circular no. SEBI/HO/IMD/PoD2/P/CIR/2024/183 dated December 31, 2024 and such other guidelines on derivatives as issued by SEBI from time to time. **CHANGE IN INVESTMENT PATTERN** The Scheme, will hold all the securities that comprise the underlying Index in the same proportion as the index.

		Expectation is that, over a period of time, the tracking error of the Scheme relative to the performance of the Underlying Index will be relatively low. The AMC would monitor the tracking error of the Scheme on an ongoing basis and would seek to minimize tracking error to the maximum extent possible. Under normal market circumstances, such tracking error is not expected to exceed by 2% p.a. for daily 12 month rolling return. However, in case of events like, dividend issuance by constituent members, rights issuance by constituent members, and market volatility during rebalancing of the portfolio following the rebalancing of the Underlying Basket, etc. or in abnormal market circumstances, the tracking error may exceed the above limits. Since the Scheme is an exchange traded fund, it will endeavor that at no point of time the scheme will deviate from the index. **For details regarding 'portfolio rebalancing ' refer link-** (https://www.dspim.com/media/pages/mandatory-disclosures/simplified-sid-information-available-through-weblin/7b745978b1-1763542907/dsp-nifty-midcap-150-etf.pdf)

XXVI.	**Introduction to Exchange Traded Funds**	An ETF is a passively managed product that provides exposure to an index or a basket of securities with the objective of generating returns as close to the index as possible. The key benefit of an ETF over traditional open-ended index funds is liquidity and availability of real-time market price on stock exchange. They can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs provide investors a fund that tracks the performance of an index with the ability to buy/sell on an intra-day basis. ETFs are structured in a manner which allows creating new units (called creation units) and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs. ETFs are usually passively managed funds wherein subscription/redemption of units works on the concept of exchange with underlying securities. In other words, large investors/institutions can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange. ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges. Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation/Redemption of units through the in-kind mechanism the mutual fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower. **Benefits of ETFs** a. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country. b. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at nearly the real-time prices as opposed to end of day prices. c. Ability to put limit orders. d. Protects long-term investors from the inflows and outflows of short-term investors. This is because the fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.

e. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, equitising cash, for arbitraging between the cash and futures market.

Market for ETFs:

ETFs are passive in nature and can be useful for various kinds of investors. It could be for experienced investors who recognize the impact of cost on their eventual investment outcomes or relatively inexperienced / newer investors who are considering starting to invest but are not sure how, and therefore need a simple instrument that gives them access to the broad market or to specific sectors they believe in. Over the past few years, there has been a good growth in the number of investors as well as the assets under management for ETFs. The primary categories of ETFs in India are: Nifty 50 and Sensex based ETFs, Government Disinvestment mandates like CPSE, Bharat 22 and Bharat Bond, Banking Sector ETFs, and Gold ETFs. There are also few fixed income, smart beta, sectoral and thematic ETFs, tracking specified indices. Given the ETF market globally has grown significantly over the past few years, there is a strong case that the size and breadth of the ETF market has a potential go up in India in years to come.
