That impact is visible in the basis (the difference in the price of future contract and spot price of stock A). Higher basis indicates the difference has widened and vice a versa.</p> <p>On February 2, 2026, the basis between the stock and its future contract was Rs 2. If the applicable Exit Load at the time of investments is 1%, then the repurchase / redemption price will be calculated as follows:</p> $\begin{aligned} &= \text{Rs. } 11.00 * (1 - 0.01) \\ &= \text{Rs. } 11.00 * 0.99 \\ &= \text{Rs. } 10.89 \end{aligned}$ <p>Example 2: The applicable NAV of the Scheme is Rs. 11.00 p.u. If the applicable Exit Load at the time of investment is Nil, then the repurchase / redemption price will be calculated as follows:</p> $\begin{aligned} \text{Repurchase / Redemption Price} &= \text{Applicable NAV} * (1 - \text{Exit Load}) \\ &= \text{Rs. } 11.00 * (1 - 0) \\ &= \text{Rs. } 11.00 * 1 \\ &= \text{Rs. } 11.00 \end{aligned}$ <p>The securities transaction tax levied under the Income-tax Act, 1961 at the applicable rate on the amount of redemption will be reduced from the amount of redemption.</p>

<p>Risk factors</p>	<p>Scheme Specific Risk factors: The Scheme is subject to the specific risks that may adversely affect the Scheme’s NAV, return and / or ability to meet its investment objective. The specific risk factors related to the Scheme include, but are not limited to the following:</p> <p>Passive Investments: The Scheme is passively managed Scheme. As per the asset allocation pattern, the scheme proposes to invest not less than 95% of the net assets in the securities of the Underlying Index in the same proportion. Performance of the Underlying Index will have a direct bearing on the performance of the Scheme. The Scheme invests in securities which are constituents of its underlying Index regardless of its investment merit, research, without taking a view of the market and without adopting any defensive measures. The AMC does not attempt to individually select securities or take defensive positions in declining markets.</p> <p>The decision of the Fund Manager to execute trades including rebalancing required will be purely driven by the inflows and outflows in the Scheme and composition of the Underlying Index. Further, it is pertinent to note that there is no element of research recommendations involved before the execution of trades in the Scheme.</p> <p>Tracking Error / Tracking Difference Risk: “Tracking Error” is defined as the annualized standard deviation of the difference in daily returns between the underlying Index and NAV of Scheme. “Tracking Difference” is defined as the annualized difference of daily returns between the index and the NAV of Scheme.</p> <p>The Fund Manager may not be able to invest the entire corpus of the Scheme in securities exactly in the same proportion as in the underlying Index due to certain factors such as rounding off, fees and expenses of the Scheme, changes to the underlying Index and regulatory policies which may affect AMC’s ability to achieve close correlation with the Underlying Index. The Scheme’s returns may therefore deviate from those of its Underlying Index.</p> <p>Tracking Error / Tracking Difference may arise due to the following reasons:</p> <ul style="list-style-type: none"> • Expenditure incurred by the Scheme. • The holding of a cash position and accrued income prior to distribution of income and payment of accrued expenses. The Scheme may not be invested at all times as it may keep a portion of the Scheme in cash to meet redemptions or for corporate actions. • Securities trading may halt temporarily due to circuit filters. • Corporate actions such as debenture or warrant conversion, rights, merger, change in constituents etc. • Rounding off of quantity of shares in Underlying Index. • Dividend received from underlying securities. • Disinvestments by Scheme to meet redemptions, recurring expenses, etc. • Execution of large buy / sell orders • Transaction cost (including taxes and insurance premium), recurring expenses and other expenses, such as but not limited to brokerage, custody, trustee and investment management fees • Realization of Unit holders’ funds • Index providers may either exclude or include new scrips in their periodic review of the scrips that comprise the underlying index. In such an event, the Scheme will try to reallocate its portfolio but the available investment/reinvestment opportunity may not permit absolute mirroring immediately. • The Scheme may not be able to acquire or sell the desired number of securities due to conditions prevailing in the securities market, such as, but not restricted to: circuit filters in the securities, liquidity and volatility in security prices. • The Index reflects the prices of securities at a point in time, which is the price at close of business day on Bombay Stock Exchange (BSE) / National Stock Exchange of India Limited (NSE). The Scheme, however, may at times trade these securities at different points in time during the trading session and therefore the prices at which the scheme trade may not be identical to the closing price of each scrip on that day on the BSE / NSE. In addition, the Scheme may opt to trade the same securities on different exchanges due to price or liquidity factors, which may also result in traded prices being at variance, from BSE / NSE closing prices.
----------------------------	---

- In case of investments in derivatives like index futures, the risk reward would be similar to investments in portfolio of shares representing an index. However, there may be a cost attached to buying an index future. Further, there could be an element of settlement risk, which could be different from the risk in settling physical shares and there is a risk attached to the liquidity and the depth of the index futures market as it is relatively new market.

The tracking error i.e., the annualized standard deviation of the difference in daily returns between the underlying index and the NAV of the Scheme based on past one year rolling data shall not exceed 2%. In case of circumstances like corporate actions, rights issue, dividends received from underlying securities, market events like circuit filters in securities or in case of abnormal market conditions, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees. However, the Fund will endeavor to limit the tracking error within 2% limits. There can be no assurance or guarantee that the Scheme will achieve any particular level of tracking error relative to performance of the Index. The Scheme existence for a period of less than one year, the annualized standard deviation shall be calculated based on available data.

Impact on Stock Liquidity in case of Circuit Filter

In case of Subscription/inflows:

The Scheme shall buy stocks as per underlying constituents wherever there is no circuit. In case of Circuit on any stock(s) in the index, the Scheme shall 1. Hold cash for stock(s) on circuit at the latest available price on the stock exchange when the circuit was triggered. 2. Buy the stock(s) immediately when circuit is open. This may impact performance and result in tracking error.

In case of Redemptions/ Outflows:

The Scheme shall sell stocks as per underlying constituents wherever there is no circuit. In case of circuit on Stock(s) in the index, the Scheme shall: 1. Pay from cash or cash equivalent or create cash to pay for stocks on circuit at the latest available price on the stock exchange when the circuit was triggered by selling other stocks which may impact performance and result in tracking error; 2. Sell stock immediately when circuit is open and re-balance portfolio which may impact performance and result in tracking error.

Risk associated with Equity and Equity Related Instruments:

Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as volume and volatility in the capital markets, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected. Further, the Equity and Equity Related Instruments are risk capital and are subordinate in the right of payment to other securities including debt securities. Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk, however, the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, should there be a subsequent decline in the value of securities held in the Scheme's portfolio. The Scheme would invest in the securities which are constituents of underlying Index in the same proportion as the securities have in the underlying Index. Hence, the risk associated with the corresponding underlying Index would be applicable to the Scheme.

Risk associated with Fixed Income and Money Market Instruments:

Interest - Rate Risk

Fixed Income and Money Market Instruments run interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rate falls, the prices increase. The extent of rise or fall in the price is a function of existing coupon, days to maturity, increase or decrease in the level of interest, credit quality, demand and supply. However, in

	<p>case of Government securities since credit risk remains zero, their prices are influenced by the movement in interest rates in the financial system.</p> <p>Credit Risk Credit risk or default risk refers to the risk that the issuer of a fixed income security may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may be affected because of change in the credit rating of the issuer/instrument and the price of a security goes down if the credit rating agency downgrades the rating of the issuer. In case of Government securities, there is minimal credit risk to that extent.</p> <p>Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation i.e. yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Securities which are not quoted on the stock exchange(s) may be illiquid and can carry higher liquidity risk in comparison with securities which are listed on the stock exchange(s) and offer exit option to the investor including put option.</p> <p>Re-investment Risk This refers to the interest rate risk at which the intermediate cash flows received from the securities in the Scheme including maturity proceeds are reinvested. Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the debt security. Consequently, the proceeds may get invested at a lower rate.</p> <p>Risks associated with Segregated Portfolio a. Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. b. Security(ies) held in segregated portfolio may not realize any value. c. Listing of units of segregated portfolio in recognized stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.</p> <p>Risk Factor associated with investing in Securities Segment and Tri-party Repo trade settlement Clearing Corporation of India Ltd. ('CCIL') is providing clearing and settlement services, for Triparty Repo trades in Government Securities, under its Securities Segment. CCIL would act as a Central Counterparty to all the borrow and lend Triparty Repo trades received by it for settlement. CCIL would also be performing the role responsibilities of Triparty Repo Agent, in terms of Repurchase transactions (Repo) (Reserve Bank) Directions, 2018 as amended from time to time. CCIL would settle the Triparty Repo trades, in terms of its Securities Segment Regulations.</p> <p>The funds settlement of members is achieved by multilateral netting of the funds position in Triparty Repo with the funds position in Outright and Market Repo and settling in the books of RBI for members who maintain an RBI Current Account. In respect of other members, funds settlement is achieved in the books of Settlement Bank. Securities settlement for Triparty Repo trades shall be achieved in the Gilt Account of the Member maintained with CCIL. Securities obligation for outright and market repo trades shall be settled in the SGL / CSGL account of the Member with RBI.</p> <p>Invesco Mutual Fund is a member of securities segment and Tri-party Repo trade settlement of the CCIL. Since all transactions of the Fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL, it reduces the settlement and counterparty risks considerably for transactions in the said segments.</p> <p>To mitigate the potential losses arising in case any member defaults in settling the transactions routed through CCIL, CCIL maintains a Default Fund. CCIL shall maintain two separate Default Funds in respect of its securities segment, one to meet the losses arising out of any</p>
--	---

default by its members from outright and repo trades and other for meeting losses arising out of any default by its members from Triparty Repo trades.

In case any clearing member fails to honor his settlement obligations, the Default Fund is utilized to complete the settlement applying the Default Waterfall Sequence. As per the said waterfall mechanism, after the defaulter's margins and defaulter's contribution to default fund have been appropriated, CCIL's contribution is used to meet the losses. Post utilization of CCIL's contribution, if there is still a loss to be met, then contribution of non-defaulting members to Default Fund is utilized to meet the said loss.

The Scheme is subject to the risk of losing initial margin and contribution to Default Fund in the event of failure of any settlement obligation. Further the Scheme's contribution is allowed to be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

Further, CCIL periodically prescribes a list of securities eligible for contribution as collaterals by members. Presently, all Central Government Securities and Treasury Bills are accepted as collaterals by CCIL. The above risk factor may undergo a change in case the CCIL notifies securities other than Government of India Securities as eligible for contributions as collateral.

Risks associated with investing in Derivatives

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies. The risks associated with the use of derivatives are different from or possibly greater than the risks associated with investing directly in securities and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly.

Other risks include risk of mispricing or improper valuation and the inability of the derivative to correlate perfectly with underlying assets, rates and indices, illiquidity risk whereby the Scheme may not be able to sell or purchase derivative quickly enough at a fair price.

Risks associated with Securities Lending

As with other modes of extensions of credit, there are risks inherent to securities lending. During the period the security is lent, the Scheme may not be able to sell such security and in turn cannot protect from the falling market price of the said security. Under the current securities lending and borrowing mechanism, the Scheme can call back the securities lent any time before the maturity date of securities lending contract. However, this will be again the function of liquidity in the market and if there are no lenders in the specified security, the Scheme may not be able to call back the security and in the process, the Scheme will be exposed to price volatility. Moreover, the fees paid for calling back the security may be more than the lending fees earned by Scheme at the time of lending the said security and this could result in loss to the Scheme. Also, during the period the security is lent, the Scheme will not be able to exercise the voting rights attached to the security as the security will not be registered in the name of the Scheme in the records of the Depository/issuer.

Risks Associated with Short Selling: Not Applicable as the scheme can not engage in short selling.

Risk Mitigation Measures:

Type of Risk	Risk Mitigation Measures
Volatility	The Scheme is a passively managed scheme and hence volatility risk will be lesser as compared to actively managed schemes.

As per Index eligibility criteria for BSE Sensex Index, constituents of Index have good liquidity in the market. Therefore, the Scheme does not envisage liquidity risk.				
Index methodology	<p>The Risk Mitigation strategy revolves around reducing the tracking error to the least possible through regular rebalancing of the portfolio, taking into account the change in weights of stocks in the Underlying Index as well as the incremental inflows into/ redemptions from the Scheme.</p> <p>About BSE Sensex TRI</p> <p>Eligible Universe: The index is derived from the constituents of the BSE 100. The inclusion of DVRs in the index will result in more than 30 stocks in the index. However, the number of companies in the index remains fixed at 30. Stocks in the eligible universe must satisfy the following eligibility factors in order to be considered for index inclusion:</p> <ul style="list-style-type: none"> • Listing History. Stocks must have a listing history of at least six months at BSE. • Trading Days. The stock must have traded on every trading day at BSE during the six-month reference period. • Derivative Linkage. Stock must have a derivative contract. • Multiple Share Classes. DVRs satisfying the above eligibility criteria are aggregated with the company's common stock and index construction is done based on the aggregated company data as detailed below. <p>Index Construction:</p> <ol style="list-style-type: none"> 1. All companies meeting the eligibility factors are ranked based on their average six-month float-adjusted market capitalization. The top 75 are identified. 2. All companies identified based on steps 1 and 2 are then combined and sorted based on their annualized traded value. Companies with a cumulative annualized traded value greater than 98% are excluded. 4. The remaining companies are then sorted by average six-month float-adjusted market capitalization. Companies with a weight of less than 0.5% are excluded. 5. The remaining companies from step 4 are then ranked based on their average six-month float-adjusted market capitalization, and are selected for index inclusion according to the following rules: <ol style="list-style-type: none"> a) The top 21 companies (whether a current index constituent or not) are selected for index inclusion with no sector consideration. b) Existing constituents ranked 22 - 39 are selected in order of highest rank until the target constituent count of 30 is reached. c) If after this step the target constituent count is not achieved, then non-constituents ranked 22 - 30 are selected by giving preference to those companies whose common India Industry Classification Structure macro-economic indicator is underrepresented in the index as compared to the macro-economic indicator representation in the BSE All Cap. d) If after this step, the target constituent count is still not achieved, non-constituents are selected in order of highest rank until the target constituent count is reached. <p>Annualized traded value is calculated by taking the median of the monthly medians of the daily traded values over the six-month period. The annualization is calculated using 250 trading days in a year.</p> <p>All additions and deletions are made at the discretion of index committee.</p> <p>Constituent Weightings: Index constituents are weighted based on their float-adjusted market capitalization.</p>

The respective addendums to the MF Lite Scheme's SID after the last update of SID	The Scheme is a new scheme, and the details will be available after the Scheme is launched.
Where will the Scheme invest?	<p>The corpus of the Scheme will be invested in:</p> <ol style="list-style-type: none"> 1. Securities which are constituents of BSE Sensex Index in the same proportion as in underlying Index. 2. Equity Related Instruments 3. Equity Derivatives 4. Non-Convertible Preference Shares (NCPS)* 5. Securities created and issued by the Central and State Governments as may be permitted by RBI 6. Certificate of Deposits 7. Treasury Bills (T-Bills) 8. Tri-party Repo 9. Repo (Repurchase Agreement) or Reverse Repo including Repo in corporate bond securities (for shorter duration only) 10. Clearcorp Repo Order Matching System (CROMS) 11. Bills Rediscounting 12. Cash Management Bills 13. Any other schemes of Invesco Mutual Fund or of any other mutual fund 14. Pending deployment of funds, the Scheme may park funds in Short Term Deposits of Scheduled commercial banks. 15. Any other securities as may be permitted by SEBI / RBI from time to time. <p>*As note 2 of Para 13.1 of SEBI Master Circular dated March 20, 2026, Non-Convertible Preference Shares shall be treated as Debt instruments.</p>
Investment Strategy	<p>The Scheme will follow a passive investment strategy and will invest in companies which are constituents of BSE Sensex Index in the same weights as in the Index with an endeavor to track the benchmark index with as low tracking error as possible. The Scheme may also invest in debt and money market instruments to meet liquidity and expense requirements. The Scheme may, for a temporary period, take exposure to derivatives of the index or its constituent stocks when equity shares are unavailable, insufficient or for rebalancing in case of corporate actions and when it makes economic benefit for the Scheme.</p> <p>Tracking Error The Tracking Error based on past one year rolling data shall not exceed 2%. In case the tracking error of the Scheme exceeds 2% due to unavoidable circumstances in the nature of force majeure which are beyond the control of the AMC, then the same will be brought to the notice of the Trustees with the corrective action by the AMC.</p> <p>Risk Control The Scheme aims to track the Underlying Index. The index will be tracked on a regular basis and changes to the constituents or their weights, if any, will be replicated in the underlying portfolio, with the purpose of minimizing tracking errors.</p> <p>The Scheme, being a passive investment, carries lesser risk as compared to active fund management. The portfolio would follow the index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to tracking errors. Thus, there would be no additional element of volatility or stock concentration on account of fund manager decisions. The fund manager would endeavor to keep cash levels at a minimum to control tracking errors.</p>

	<p>The Risk Mitigation strategy revolves around reducing the tracking error to the least possible through regular rebalancing of the portfolio, taking into account the change in weights of stocks in the Underlying Index as well as the incremental inflows into / redemptions from the Scheme.</p> <p>While these measures are expected to largely mitigate the above risks, there can be no assurance that these risks would be completely eliminated.</p> <p>Investment in Derivatives</p> <p>The Scheme may invest in various derivative instruments which are permissible under the applicable Regulations and shall also be subject to the investment objective and strategy of the Scheme and the internal limits if any, as laid down from time to time. These include but are not limited to futures (both stock and index) and options (stock and index). For detailed derivative strategies, please refer to SAI.</p> <p>Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.</p> <p>The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.</p>
<p>Investment Restrictions</p>	<p>Pursuant to SEBI MF Regulations, specifically the Sixth schedule and amendments thereto, the following investment restrictions are currently applicable to the Scheme:</p> <ol style="list-style-type: none"> 1 The Scheme shall not invest more than 10% of its NAV in the listed or to be listed equity shares or equity related instruments of any company and in listed securities/units of Venture Capital Funds. <p>Provided, that the limit of 10% shall not be applicable for investments in case of index fund or sector or industry specific scheme.
