- Any other instruments as permitted by RBI/SEBI from time to time

The inter Scheme transfer of investments shall be in accordance with the provisions contained in paragraph 10.13 of the Master Circular pertaining to Inter-Scheme transfer of investments.

For detailed definition and applicable regulations/guidelines for each instrument please refer Section II.

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme follows a passive investment strategy and seeks to generate returns that are commensurate with the performance of the Nifty 10 yr Benchmark G-Sec Index, subject to tracking error.

As per clause 4.4.6 (a) of SEBI master circular, the duration of the portfolio of the Scheme shall replicates the duration of the underlying index within a maximum permissible deviation of +/- 10%.

In line with clause 4.4.6 (c) of SEBI Master Circular, the Scheme, replicating a Constant Maturity index, will invest in securities with residual maturity within +/- 10% of maturity range of the index.

Since the scheme is an exchange traded fund, the scheme will only invest in the securities constituting the underlying index. However, due to changes in underlying index the scheme may temporarily hold securities which are not part of the index. For example, the portfolio may hold securities not included in the respective underlying index as result of certain changes in the underlying index such as such as reconstitution, addition, deletion etc. The fund manager's endeavour would be to rebalance the portfolio in order to mirror the index; however, there may be a short period where the constituents of the portfolio may differ from that of the underlying index.

Portfolio Turnover

The Scheme will track the underlying Index and is a passively managed scheme. Due to its passive nature, the portfolio turnover ratio may vary. Generally, turnover will be confined to rebalancing of portfolio on account of new subscriptions, redemptions and change in the composition of the Underlying Index and corporate actions of securities included in the Underlying Index. A higher portfolio turnover results in higher brokerage and transaction cost.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Justification for Benchmark-

The scheme shall track Nifty 10 yr Benchmark G-Sec Index and seeks to generate returns that are commensurate with the performance of the index making it a suitable benchmark.

However, as per the said guidelines, ETFs are exempted from the purview of the aforesaid regulations and guidelines.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The NAV of the Units of a Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation date.

NAV of Units under each Scheme may be calculated by either of the following methods shown below:

$$\text{NAV Per Unit (Rs.)} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme on the Valuation Date}}$$

The numerical illustration of the above method is provided below.

Market or Fair Value of Scheme's investments (Rs.) = 11,42,53,650.00

Current Assets (Rs.) = 10,00,000.00

Current Liabilities and Provisions (Rs.) = 5,00,000.00

No. of Units outstanding under the Scheme = 1,00,00,000

$$\text{NAV Per Unit (Rs.)} = \frac{11,42,53,650.00 + 10,00,000.00 - 5,00,000.00}{1,00,00,000} = 11.4754$$

N.B.: The aforesaid provisions pertaining to "Calculation of NAV" shall apply in respect of each individual Scheme and/or plan as the case may be. The NAV per Unit above is rounded off to four decimals.

The NAV will be calculated as of the close of every Business Day.

NAVs will be rounded off to four decimal places. The valuation of the Schemes' assets and calculation of the Schemes' NAVs shall be subject to audit on an annual basis and such regulations as may be prescribed by SEBI from time to time.

While determining the price of the units, the mutual fund shall ensure that the repurchase price of Scheme is not be lower than 97% Net Asset Value as provided under SEBI (MF) Regulations. For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

However, the investor shall have to bear costs in form of bid/ask spread or brokerage or such other cost as charged by his broker for transacting in units of the scheme through secondary market

Investors may note that the Trustee has the right to modify the existing load structure, subject to a maximum as prescribed under the SEBI (MF) Regulations. Any imposition or enhancement in the load shall be applicable on prospective investments only. At the time of changing the load structure, the AMC shall consider the following measures to avoid complaints from investors about investment in the schemes without knowing the loads:

- The addendum detailing the changes will be displayed on the Website of the Fund (www.dspim.com).
- The addendum detailing the changes will be attached to SID and KIM.
- The account statements shall continue to include applicable load structure.
- The addendum shall be sent via email to all the distributors/brokers/Investor Service Centre (ISC), so that the same can be provided along with the SID and KIM already in stock till it is updated.

Investors are advised to contact any of the Investor Service Centers or the AMC to know the latest position on Exit Load structure prior to investing in the Scheme.

E. COMPLIANCE WITH POTENTIAL RISK CLASS MATRIX NORMS

In line with clause 6.18 of SEBI Master Circular the PRC of the Scheme based on interest rate risk and credit risk of the Scheme is being classified.

Further, the investors are requested to note following in accordance with the above mentioned clause read along with the clarification issued by AMFI:

- (i) when PRC cell classification is changed into a cell with either a higher interest rate risk or credit risk, mutual funds shall intimate to all unit holders about the change in the PRC value post completion of the fundamental attribute change (FAC) process. This shall be in addition to the intimation to unit holders about the proposed FAC and the 30-day exit period, prior to the change.
- (ii) the change in the PRC value due to investment actions, price changes, rating changes, etc. shall be determined as part of the day-end post trade compliance check and if the day end PRC value is higher than the maximum risk specified for either of the risks, it shall be rebalanced within a period specified in the Scheme Information Document of the Scheme. Such rebalancing shall be monitored by the Investment Management Committee of the AMC. However, the rule relating to maximum residual maturity of the instrument as per clause 6.18.4 of SEBI Master Circular shall be part of pre-trade checks. Further, only a permanent change in the PRC positioning of a scheme into a higher risk cell will be considered as a fundamental attribute change in terms of Regulation 22(9)(c).

At all points of time, positioning of the Debt ETF Scheme in the Potential Risk Class (PRC) matrix shall be in the same cell as that of positioning of the index in the PRC matrix.

F. INTRODUCTION TO EXCHANGE TRADED FUNDS

ETF is a passively managed product that provides exposure to an index or a basket of securities with the objective of generating returns as close to the index as possible. The key benefit of an ETF over traditional open-ended index funds is liquidity and availability of real-time market price on stock exchange. They can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. ETFs provide investors a fund that tracks the performance of an index with the ability to buy/sell on an intra-day basis. ETFs are structured in a manner which allows creating new units (called creation units) and redeem outstanding units directly with the fund, thereby ensuring that ETFs trade close to their actual NAVs.

ETFs are usually passively managed funds wherein subscription/redemption of units works on the concept of exchange with underlying securities. In other words, large investors/institutions can purchase units by depositing the underlying securities with the mutual fund/AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange. ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

Tracking Error of ETFs is likely to be low as compared to a normal index fund. Due to the Creation/Redemption of units through the in-kind mechanism the mutual fund can keep lesser funds in cash. Also, time lag between buying/selling units and the underlying shares is much lower.

Benefits of ETFs

- a. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- b. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at nearly the real-time prices as opposed to end of day prices.
- c. Ability to put limit orders.

- d. Protects long-term investors from the inflows and outflows of short-term investors. This is because the fund does not bear extra transaction cost when buying/selling due to frequent subscriptions and redemptions.
- e. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, equitising cash, for arbitraging between the cash and futures market.

Market for ETFs:

ETFs are passive in nature and can be useful for various kinds of investors. It could be for experienced investors who recognize the impact of cost on their eventual investment outcomes or relatively inexperienced / newer investors who are considering starting to invest but are not sure how, and therefore need a simple instrument that gives them access to the broad market or to specific sectors they believe in. Over the past few years, there has been a good growth in the number of investors as well as the assets under management for ETFs. The primary categories of ETFs in India are: Nifty and Sensex based ETFs, Government Disinvestment mandates like CPSE, Bharat 22 and Bharat Bond, Banking Sector ETFs, and Gold ETFs. There are also few fixed income, smart beta, sectoral and thematic ETFs, tracking specified indices. Given the ETF market globally has grown significantly over the past few years, there is a strong case that the size and breadth of the ETF market has a potential go up in India in years to come.

Example of Creation and Redemption of Units:

The example of Creation Unit as on November 30, 2025 for DSP Nifty 10 yr Benchmark G-Sec ETF is as follows:

Security	ISIN Number	Closing Price (Clean)	Accrued Interest	Closing Price (Dirty)	Quantity	Face Value of Security	Value of Security	Weight %
6.48% GOVT. STOCK 2035	IN0020250091	99.8302	0.9900	100.8202	12,800	1,280,000	1,290,498.56	100

Cash component will be arrived at in the following manner	
Index Value	2,616.64
No. of units comprising one basket	50,000
NAV/unit	26.1664
Value of 1 creation basket	1,308,320
Value of portfolio deposit	1,290,499
Cash component	17,821

The above is just an example to illustrate the calculation of cash component.

Cash Component will vary depending upon the actual charges incurred like Custodial Charges and other incidental charges for creating units.

G. Tracking error, Tracking Difference Risk & Debt Index Replication Factor:

Tracking error:

Tracking Error is defined as the standard deviation of the difference between daily returns of the index and the NAV of the Scheme.

Thus Tracking Error is the extent to which the NAV of the Scheme moves in a manner inconsistent with the movements of the Scheme's benchmark index on any given day or over any given period of time

due to any cause or reason whatsoever including but not limited to expenditure incurred by the Scheme, Income Distribution cum Capital Withdrawal payouts if any, whole cash not invested at all times as it may keep a portion of funds in cash to meet redemption etc.

Tracking Difference:

Tracking Difference is defined as the annualized difference of daily returns between the index and the NAV of the ETF Schemes.

Tracking difference of the Scheme shall be disclosed on the website of the AMC i.e. www.dspim.com and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

Debt Index Replication Factor:

Debt Index Replication Factor (DIRF) indicates how closely the Scheme tracks the underlying benchmark index. For this purpose, the Scheme shall be considered to completely replicate an individual issuer if the Scheme portfolio has the same issuer in the exact same percentage akin to the Index. DIRF for the Scheme shall be disclosed on the AMC's website on monthly basis.

Annualized tracking difference averaged over one year period for Debt ETF scheme shall not exceed 1.25%. In case the average annualized tracking difference over one year period for Debt ETF scheme is higher than 1.25%, the same shall be brought to the notice of the Board of Trustees with corrective actions taken by the AMC, if any.

B. Risk factors

Scheme specific risk Factors:

i. Liquidity and Settlement Risk:

The liquidity of a fixed income security may change, depending on market conditions leading to changes in the liquidity premium attached to the price of such securities. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio. Different segments of the financial markets have different settlement cycle/periods and such settlement cycle/periods may be impacted by unforeseen circumstances, leading to Settlement Risk. This can adversely affect the ability of the Fund to swiftly execute trading strategies which can lead to adverse movements in NAV.

ii. Credit Risk:

Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and/or principal payment obligations. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest.

iii. Term Structure of Interest Rates (TSIR) Risk:

The NAV of the Scheme' Units, to the extent that the Scheme are invested in fixed income securities, will be affected by changes in the general level of interest rates. When interest rates decline, the value of a portfolio of fixed income securities can be expected to rise. Conversely, when interest rates rise, the value of a portfolio of fixed income securities can be expected to decline.

iv. Re-investment Risk:

The investments made by the Scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the 'interest on interest' component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

v. Spread risk:

In a floating rate security, the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

vi. Risks associated with the scheme

- a. **Passive Investments:** As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select securities or to take defensive positions in declining markets. The scheme may face challenges in replicating the index on account of illiquidity or any other reason beyond the control of the investment manager.
- b. **Tracking Error & Tracking Difference Risk:** Tracking Error & Tracking difference is divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Based on that the availability of issuances of SDLs and Government Securities, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error & Tracking difference. That said, the risk parameters of the portfolio of the Scheme and underlying index could be similar. The Fund will endeavor to keep the tracking error & tracking difference as low as possible. Under normal circumstances, the annualized tracking difference averaged over one year period error is not expected to exceed 1.25% per annum. Tracking error & Tracking Difference could be the result of a variety of factors including but not limited to:

- a. Delay in the purchase or non- availability of securities which are part of the Index

- b. Delay in liquidation of securities which have been removed by the Index
- c. Due to timing of transactions either on RFQ platforms or in open market
- d. Due to investment in out of index investments such as treasury bills, Repo in Government securities and TREPS
- e. Due to over-weight / under-weight investment in bonds of eligible issuers at ISIN level which are part of the Index
- f. Due to mismatch in the weight of the issuers forming part of the Index and the Scheme throughout life of the Scheme.
- g. Change in asset allocation between the Index and the Scheme in the last year of the Scheme.
- h. Difference in valuation of underlying bonds by the Index Provider and AMC's valuation providers.

vii. Risks Associated with exposure in Tri-party Repo (TREPS):

DSP mutual fund is a member of Securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India Limited (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally by CCIL which helps reduce the settlement and counterparty risks for these transactions. CCIL manages the risks through its risk management processes such that the ultimate risk to its members from fails is either eliminated or reduced to the minimum. CCIL thus maintains margin and default fund contributions of each member for various business segments as per the terms of its Bye Laws, Rules and Regulations to cover potential losses arising from the default member.

In an event of any clearing member failing to honor settlement obligations, the margin and default Fund is utilized to complete the settlement. As per the waterfall mechanism, after the defaulter's margins and the defaulter's contribution to the default fund have been utilized, CCIL's own contribution is used to meet the losses and thereafter any residual loss is appropriated from the contributions of the non-defaulting members.

Thus the scheme is subject to risk of the margin and default fund contribution being appropriated in the case of failure of any settlement obligations. Further, the scheme's contribution may be used to meet the residual loss in case of default by the other clearing member (the defaulting member).

The risk factors may undergo change in case the CCIL notifies securities other than Government of India securities as eligible for contribution as collateral.

viii. Risks Associated with Transaction in Units Through Stock Exchange Mechanism

In respect of transactions in Units of the Scheme through NSE, BSE or any other recognised stock exchange, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by NSE, BSE or such other exchange and their respective clearing corporations on which the Fund has no control. Further, transactions conducted through the stock exchange mechanism shall be governed by the operating guidelines and directives issued by NSE, BSE or such other recognised exchange in this regard.

C. RISK MITIGATION STRATEGIES

The Scheme will invest in securities which are constituents of the underlying Index subject to compliance with clause 4.4 of SEBI Master circular for Debt Exchange Traded Funds (ETFs)/Index Funds. Based on the availability of issuances, it is expected that the portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error & Tracking Difference. That said, broad risk parameters of the portfolio of the Scheme such as credit rating, weighted average YTM, weighted average maturity, asset allocation etc. are expected to be similar to the Underlying Index.

The Scheme's exposure to money market instruments will be in line with the asset allocation table. This allocation will be monitored periodically and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions

prescribed from time to time.

i. Market Risk:

The Scheme, being a Target Maturity Date index fund structure, is expected to follow a Buy and Hold investment strategy in a passive manner. Investors who remain invested until the maturity of the Scheme are expected to mitigate intermittent market / volatility risk to large extent.

ii. Liquidity Risk:

The Scheme intends to invest in government securities. In general, government securities enjoy higher level of secondary market liquidity.

iii. Credit Risk:

The Scheme intends to invest in government securities. As a result the bond issued by them are considered as relatively safe from a credit perspective.

iv. Term Structure of Interest Rates (TSIR) Risk:

The Scheme being passively managed is expected to follow a Buy and Hold investment strategy in a passive manner.

v. Risk Management & Liquidity Management tools

DSP mutual fund schemes as mandated wide various SEBI & AMFI circulars, have adopted the following for risk management & liquidity management

Potential Risk Matrix (PRC) & Risk-o-meter: Investors are requested to review this scheme's Potential Risk Matrix (PRC) to understand the maximum risk that this scheme will run as per design and & Risk-o-meter to understand periodical measurement of that risk on a regular basis. Investor are suggested to read about various disclosures under the section "C. PERIODIC DISCLOSURES" pertaining to "Compliance with Potential Risk Class Matrix norms" & "Risk-o-meter" to understand in detail the disclosure frequency and remedial measures in case of breaches in the boundaries.

ii. Information about the scheme:

A. Where will the scheme invest

2. Cash and Cash Equivalents: The Scheme may also invest in securities having residual maturity of less than 91 Days like TREPS, Treasury Bills, Government securities, Repo on Government Securities and any other securities as may be allowed under the regulations prevailing from time to time.
 - TREPs is a money market instrument that enables entities to borrow and lend against sovereign collateral security. The maturity ranges from 1 day to 90 days and can also be made available upto 1 year. Central Government securities including T-bills are eligible securities that can be used as collateral for borrowing through TREPs.
 - Treasury bills (T-bills) are short-term government securities issued at a discount to their face value and mature within one year. They do not pay periodic interest but provide returns by maturing at their full face value, with the difference between the purchase price and the maturity value representing the investor's earnings. T-bills are considered low-risk investments due to government backing.
 - Government Securities - Securities created and issued by the Central Government and/or a State Government (including Treasury Bills) or Government Securities as defined in the Government Securities Act, 2006, as amended or re-enacted from time to time.
 - Repo (Repurchase Agreement) or Reverse Repo is a transaction in which two parties agree to sell and purchase the same security with an agreement to purchase or sell the same security at a mutually decided future date and price. The transaction results in collateralized borrowing or lending of funds.
