- i. The AMC shall immediately disclose the same to the investors of the scheme after the expiry of the mandated rebalancing period (i.e. 30 Business Days) through SMS and email/ letter including details of portfolio not rebalanced.
 - ii. The AMC shall also immediately communicate to the investors through SMS and email/letter when the portfolio is rebalanced.
 - iii. subject line of the aforementioned emails / letters should be uniform across industry and clearly indicate "breach of" / "deviation" from mandated asset allocation or prescribed prudential limits.
- c. The AMC shall disclose scheme wise deviation of the portfolio (beyond aforesaid 10% limit) from the mandated asset allocation beyond 30 business days, on the AMC 's website i.e. <https://navi.com/mutual-fund/downloads/statutory-disclosure>
- b. The AMC shall also disclose any deviation from the mandated asset allocation to investors along with periodic portfolio disclosures as specified by SEBI from the date of lapse of mandated plus extended rebalancing timelines.

The above mentioned norms shall be applicable to main portfolio only and not to segregated portfolio(s), if any.

Rebalancing due to Short Term Defensive Considerations:

It may be noted that no prior intimation/indication would be given to investors when the composition/asset allocation pattern under the scheme undergo changes within the permitted band as indicated above and for defensive considerations owing to changes in factors such as market conditions, market opportunities, applicable regulations and political and economic factors.

As per Para 1.9.1 (b) of SEBI Master Circular dated March 20, 2026, the asset allocation pattern indicated above may change for a short term period on defensive considerations, keeping in view market conditions, market opportunities, applicable regulations and political and economic factors. These proportions may vary depending upon the perception of the Fund Manager, the intention being at all times to seek to protect the interests of the Unit holders. In case of any deviation, the portfolio shall be rebalanced within 30 calendar day

B. WHERE WILL THE SCHEME INVEST?

The corpus of the Scheme shall be invested predominantly in units of underlying mutual fund scheme(s) and other permitted instruments in line with the investment objective and asset allocation table. The Scheme may also hold debt and money market instruments for liquidity within regulatory limits and the asset allocation pattern. The scheme shall invest in :-

Units of Equity Oriented Mutual Fund Schemes

Units of Debt Oriented Mutual Fund Schemes

Units of Gold ETFs & Silver ETFs

Debt and Money Market Instruments:

- Tri-party repo (TREPS)
- Certificate of Deposit (CD) of scheduled commercial banks and development financial Institutions
- Commercial Paper (CP)

- Treasury Bill (T-Bill)
- Repo
- Securities created and issued by the Central and State Governments
- Non-convertible debentures and bonds
- Floating rate debt instruments
- Investment in Short Term Deposits

The Fund Manager reserves the right to invest in such securities as may be permitted from time to time and which are in line with the investment objectives of the Scheme.

Please refer to **Section II** of the document for further details for each instrument.

C. WHAT ARE THE INVESTMENT STRATEGIES?

Navi Multi - Asset Omni FoF is an actively managed Fund. The scheme will follow a fund-of-funds approach and invest predominantly in units of identified underlying schemes across permitted asset classes, subject to SEBI limits and the SID / SAI. The fund manager may rebalance allocations within permitted bands and hold limited cash / debt and money market instruments for liquidity, corporate actions and regulatory requirements.

The Scheme can also invest in Debt & Money Market Instruments as stated above in the Asset Allocation Section.

Portfolio Turnover:

The Scheme being an open-ended Scheme, it is expected that there would be a number of Subscriptions and Redemptions on a daily basis. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager these opportunities can be played out to enhance the total return of the portfolio, which will result in increase in portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable measure accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked with 35% Nifty500 TRI + 35% Nifty Composite Debt Index + 25% Domestic Gold Price + 5% Domestic Silver Price

Justification for use of benchmark:

The Scheme follows a multi-asset fund-of-funds approach with allocation across equity, debt and commodity (gold/silver) exposures through underlying schemes. The composite benchmark (35% Nifty500 TRI + 35% Nifty Composite Debt Index + 25% Domestic Gold Price + 5% Domestic Silver Price) reflects the intended asset allocation mix and is therefore the most suited benchmark for evaluating performance of the Scheme.

The benchmark and additional benchmark returns shall be calculated at the Total return Index (TRI) variant of the Index chosen.

E. WHO MANAGES THE SCHEME?

The Scheme and any overseas component as per applicable SEBI circulars is managed by Mr. Rushabh Patel. His details are as under:

AMC may invest in the Scheme(s) anytime during the continuous offer period subject to the SEBI (MF) Regulations, 2026. The AMC may also invest in existing schemes of the Mutual Fund. As per the existing SEBI (MF) Regulations, 2026, the AMC will not charge Investment Management and Advisory fee on the investment made by it in the Scheme(s) or existing Schemes of the Mutual Fund.

Subject to Regulation 22(3)(a) of the SEBI (Mutual Funds) Regulations, 2026 read with paragraph 7.13 of SEBI Master Circular on Mutual Funds dated March 20, 2026, the AMC shall invest such amounts in such schemes of the mutual fund, based on the risks associated with the schemes, as may be specified by SEBI from time to time. Such investment shall be maintained at all times and shall not be redeemed unless the scheme is wound up.

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per Unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of Units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Seventh Schedule of the SEBI (MF) Regulations, 2026 , or such norms as may be specified by SEBI from time to time. In case of any conflict between the Principles of Fair Valuation and valuation guidelines specified by SEBI, the Principles of Fair Valuation shall prevail.

The Net Assets Value (NAV) of the Units under the Scheme shall be calculated as shown below:

$$\text{NAV (Rs.)} = \frac{\text{Market or fair Value of Scheme's Investments} + \text{Current Assets including Accrued Income} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under Scheme on the Valuation Day}}$$

The NAV shall be calculated up to four decimal places. However the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Option. The NAVs of the Growth Option and the Dividend Option will be different after the declaration of the first Dividend.

The NAVs will be calculated for all the Business days.

The Mutual Fund will ensure that the Redemption Price will not be lower than 97% of the Applicable NAV.

Illustration on Computation of NAV: If the net assets of the Scheme are Rs. 10,55,55,000.00 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: $10,55,55,000.00 / 1,00,00,000 = \text{Rs. } 10.5555 \text{ per unit}$.

Ongoing price for Redemption (sale) /Switch outs (to other schemes/plans of the Mutual Fund) by Investors.

Ongoing price for redemption /Switch out (to other Schemes/Plans of the Mutual Fund) is the price which a Unit holder will receive for redemption/Switch-outs. During the continuous offer of the Scheme, the Unit holder can redeem the Unit at Applicable NAV.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2024 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be the same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2024, when the Applicable NAV = Rs. 10/-

Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

For exit on or before 30 days from the date of allotment – 1.00%

For exit after 30 days from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 30 days i.e. on or before March 31, 2025; say December 1, 2024, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

= Rs. 12 * (1-1%) = Rs. 11.88/-

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 30 days i.e. after March 31, 2025; say April 1, 2025, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

= Rs. 12 * (1-0) = Rs. 12/-

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investors shall further reduce to the extent of applicable statutory levies or taxes.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to the **SAI**.

Any change in Load structure shall be only on a prospective basis i.e. any such changes would be chargeable only for Redemptions from prospective purchases (applying first in first out basis).

E. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

- Pursuant to paragraph 7.19 of SEBI Master Circular on Mutual Fund dated March 20, 2026, the Scheme shall have
 - a. minimum of 20 investors and
 - b. no single investor shall account for more than 25% of the corpus of the Scheme.

- If either/both of such limit(s) is/are breached during the NFO of the Scheme, it shall be ensured that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions.
- In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 36(2)(c) shall become applicable automatically without any reference from the Board and accordingly the Scheme / Plan(s) shall be wound up and the units shall be redeemed at applicable NAV.
- The average net assets of the scheme shall be calculated daily and any breach of the 25 % holding limit by an investor shall be determined. At the end of the quarter, the average of daily holding by each such investor is computed to determine whether that investor has breached the 25 % limit over the quarter. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month shall be allowed and thereafter the investor who is in breach of the rule shall be given 15 calendar days' notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 calendar days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th calendar day of the notice period.
- The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by the Board.

Section II

I. Introduction

A. Definitions/interpretation

For detailed description please refer; <https://navi.com/mutual-fund/downloads/disclosure-sid-kim>>>Disclosure for active schemes>> Definitions

B. Risk factors

Scheme Specific Risk Factors

The Scheme is subject to the specific risks that may adversely affect the Scheme's NAV, return and / or ability to meet its investment objective. The specific risk factors related to the Scheme include, but are not limited to the following:

The risk factors of the underlying schemes will be relevant and must be treated as risk factors of Navi Multi Asset Omni FoF.

The investors should refer to the Scheme Information Documents and the related addendum for the scheme specific risk factors and special consideration of the respective Underlying Schemes.

- Investments in underlying schemes will have all the risks associated with such schemes including performance of underlying stocks, derivative investments, stock lending, changes in credit rating, trading volumes, settlement periods, price/interest rate risk, volatility & liquidity in money markets, basis risk, spread risk, re-investment risk, tracking error risk etc.
- Since the Scheme proposes to invest in underlying schemes, the Scheme's performance will depend upon the performance of the underlying schemes and any significant underperformance in even one of the underlying schemes may adversely affect the performance of the Scheme.
- Any change in the investment policies or the fundamental attributes of the underlying schemes may affect the performance of the Scheme.
- The investors of the Scheme shall bear the recurring expenses of the Scheme in addition to the expenses of the underlying schemes. Hence the investor under the Scheme may receive lower pre-tax returns than what they may receive if they had invested directly in the underlying schemes in the same proportions. The TER of the Scheme shall be in compliance with the SEBI Mutual Fund Regulations
- The Portfolio disclosure of the Scheme will be limited to providing the particulars of the underlying schemes where the Scheme has invested and will not include the investments made by the underlying schemes.
- The Portfolio rebalancing may result in higher transaction costs;
- The Scheme's performance may be impacted by exit loads or other redemption charges that may be charged at the time of redemption from the Underlying Schemes. Since the incidence of exit loads on investments made by the Scheme in Underlying Schemes of the Fund is based on first-in, first-out principle, it is anticipated that the impact of such exit loads/redemption charges could be minimal during the normal course of functioning of the Scheme.
- In the event of receipt of an inordinately large number of redemption requests and inability of the Underlying Scheme(s) to generate enough liquidity because of market conditions, there may be delays in redemption of units.

Risks associated with Fixed Income Securities:

Interest-Rate Risk: Fixed income securities such as government bonds, corporate bonds and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.

Re-investment Risk: Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.

Credit Risk: This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Risk factors associated with processing of transactions through Stock Exchange Mechanism:

The trading mechanism introduced by the Stock Exchange(s) is configured to accept and process transactions for mutual fund Units in both Physical and Demat Form. The allotment and/or redemption of Units through NSE and/or BSE or any other recognised Stock Exchange(s), on any Business Day will depend upon the

modalities of processing viz. collection of application form, order processing /settlement, etc. upon which the Fund has no control. Moreover, transactions conducted through the Stock Exchange mechanism shall be governed by the operating guidelines and directives issued by respective recognized Stock Exchange(s).

C. Risk mitigation strategies

Risk and investment are two sides of the same coin of Fund Management. Effective risk management is crucial for achieving good performance. Adequate safeguards would be incorporated in the portfolio management process. The main instrument for reducing risk is through diversification. The Fund Manager's job is to identify securities which offer higher returns with a lower level of risk.

The fund will endeavour to manage the various risks associated with investing in equity and equity related instruments. Risk is expected to be reduced through diversification of portfolio across various sectors and market capitalizations. Risk Mitigation measures for the 3 major risks associated with fixed income securities are given below:

Interest Rate Risk Fixed income securities such as government bonds, corporate bonds and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.	The modified duration of a portfolio is one of the means of measuring the interest rate risk of the portfolio. Higher is the modified duration, the fund stands exposed to a higher degree of interest rate risk. The Fund Manager would decide on the modified duration to be maintained for the portfolio at a particular point of time after taking into account the current scenario and the investment objective of the scheme. The portfolio duration will be decided after doing a thorough research on the general macroeconomic condition, political environment, systemic liquidity, inflationary expectations, corporate performance and other macroeconomic considerations. The Investment Committee of the AMC would be monitoring the portfolios constantly and would be giving direction regarding portfolio modified duration to the Fund Manager.
Credit Risk This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are	The Investment Team would follow a bottom up approach to create a debt Investment universe. The investment team would carry out rigorous in depth credit evaluation of the money market and debt instruments the scheme proposes to invest in. The credit evaluation will essentially be a bottom up approach and include a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term / long term financial health of the issuer. different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.	Agencies like CRISIL, ICRA, FITCH and CARE would be taken into account while constructing this universe. This universe would be constantly monitored by the Investment Committee which would recommend any additions/ deletions from the investment universe.
Liquidity Risk The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.	The Fund Manager would maintain adequate cash/cash equivalent securities to manage the day to day redemptions of the fund. Attention would be given to the historic redemption trends while deciding on the cash equivalent component of the portfolios. Also the Fund Manager and Dealer would be keeping track of various securities being traded in the market and would strive to keep the component of illiquid securities in the portfolio at a low percentage of the total portfolio.
Liquidity Risk on account of investments in underlying funds	The investments shall be made in underlying funds, which provide adequate liquidity
Expense Risks associated with investments in underlying funds	The aggregate of expenses incurred by the Fund-of-Funds scheme and the underlying funds is subject to limits prescribed by SEBI.
Investment Policy and/or fundamental attribute change risks associated with investments in underlying funds	Investments shall be made in such underlying funds, which have similar investment objectives to the domestic fund in India. However, there exists a possibility that there is a change in the fundamental attributes of the underlying fund. In such circumstances, the Fund Manager will seek to invest in other funds, which have the same investment objective as the domestic fund.

Additional Scheme Specific Risk Factors

1) Asset Allocation Risk

The performance of the Scheme will depend on the Fund Manager's decisions regarding allocation across equity-oriented schemes, debt-oriented schemes and Gold & Silver ETFs. The selected asset allocation strategy may underperform other asset allocation strategies or prevailing market conditions. Market movements between portfolio reviews may also result in temporary deviations from the intended asset allocation, which may adversely impact the Scheme's performance.

2) Underlying Scheme Selection Risk

The Scheme's performance depends upon the Fund Manager's ability to identify and select appropriate underlying schemes. The selected underlying schemes may underperform their respective benchmarks or

comparable schemes owing to investment style, security selection, market conditions or other factors, thereby adversely affecting the Scheme's returns.

3) **Risks associated with Gold & Silver ETFs**

Investments in Gold & Silver ETFs are subject to risks arising from fluctuations in precious metal prices due to changes in global demand and supply, inflation expectations, interest rates, currency movements, geopolitical developments and other macroeconomic factors. In addition, the underlying ETFs may experience tracking error or tracking difference, whereby their returns may deviate from the performance of the underlying bullion due to expenses, cash holdings, transaction costs, liquidity constraints and other operational factors. Such risks may adversely impact the performance of the Scheme.

4) **Concentration Risk**

Although the Scheme invests across multiple asset classes, investments may be concentrated in a limited number of underlying schemes. Any adverse performance, liquidity constraints or changes in the investment strategy of one or more underlying schemes may materially affect the performance of the Scheme.

5) **Valuation Risk**

The Scheme invests in underlying mutual fund schemes whose NAVs may be determined at different valuation points. Differences in valuation timing, pricing methodologies or market movements between valuation points may result in temporary differences in the valuation of the Scheme.
