C. WHAT ARE THE INVESTMENT STRATEGIES?

Investment Strategy:

The Scheme is an actively managed Scheme.

The investments may be made in primary as well as secondary markets and the portfolio will be adequately diversified. The funds will be invested predominantly in Government Securities of different maturities. The investments may be made in primary as well as secondary markets. As far as possible, the portfolio will be adequately diversified to reduce the risk of under-performance, arising out of unexpected security-specific factors.

Fund manager will also take exposure to money market instruments and some portion of the portfolio will be invested in liquid securities so as to meet the normal repurchase requirements. The investment will be made in securities which are reasonably liquid and of varying maturity.

The investment pattern of the Scheme is indicative and may be changed by the Fund Manager for defensive considerations. The funds raised under the Scheme shall be invested predominantly in Govt. Securities defined in Section 2(2) of the Public Debt Act, 1944.

Apart from investment restrictions under SEBI (MF) Regulations, the Fund does not presently intend to follow any internal norms vis-a-vis limiting exposure to a particular scrip or sector etc. However, the Fund may consider imposing any restrictions depending on the changes in the investment environment from time to time. The investments may be made in primary as well as secondary markets. As far as possible, the portfolio will be adequately diversified to reduce the risk of underperformance, arising out of unexpected security-specific factors.

Procedure followed for investment decisions:

The Fund Manager of the Scheme is responsible for making buy / sell decisions for the Scheme's portfolio and seeks to develop a well-diversified portfolio taking into account the asset allocation patterns of other schemes along with risks that are associated with such investments. The investment decisions are made on an ongoing basis keeping in view the market conditions and other regulatory aspects.

The AMC has constituted an Investment Committee, currently comprising of the CEO, COO, Head of Risk Management, Chief Investment Officer - Equities and Chief Investment Officer - Fixed Income that meets at periodic intervals. The Investment Committee's role is to formulate broad investment strategies for the Scheme, review the performance of the Scheme and the general market outlook.

The Fund Manager is responsible for facilitating investment debate and a robust investment culture. The investment team would hold ongoing meetings as well as additional ad-hoc meetings as needed, to explore the investment thesis.

It is the responsibility of the AMC to seek to ensure that the investments are made as per the Regulatory guidelines, the investment objective of the Scheme and in the interest of the Unit holders of the Scheme.

The AMC will keep a record of all investment decisions in accordance with the guidelines issued by SEBI.

The AMC and Trustees will review the performance of the scheme in their Board meetings. The performance would be compared with the performance of the benchmark index and with peer group in the industry.

Exposure to Derivatives:

The Scheme shall follow exposure limits on Derivatives as per the exposure limits permitted under the SEBI Regulations and circulars issued from time to time and shall be within the limits prescribed by the Trustees.

SEBI vide Para 7.5 of SEBI Master Circular for Mutual Funds dated June 27, 2024 permitted mutual funds to participate in derivatives trading subject to the observance of guidelines issued by SEBI. Mutual Funds are permitted to participate in the derivatives market at par with Foreign Institutional Investors (FII). Accordingly, the mutual funds shall be treated at par with a registered FII in respect of position limits. The Mutual Fund will be considered as trading members like registered FIIs and the schemes of Mutual Funds will be treated as clients like sub-accounts of FIIs.

As a part of the fund management process, the AMC may use appropriate derivative instruments in accordance with the investment objectives of the Scheme and as per procedure prescribed under the stated circular.

For detailed derivative strategies, please refer to SAI.

Underwriting:

The scheme will not accept underwriting and sub underwriting obligations.

Portfolio Turnover Policy:

The Scheme is an open-ended Scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. Consequently, it is difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio.

Risk Mitigation:

Sovereign & Money Market Securities

The Scheme has a risk management strategy that endeavors to manage risks associated with investing in fixed income & money market instruments. The Scheme has identified various risks pertaining to the scheme including interest rate, credit and liquidity risks and has placed appropriate limit and control structures that are embedded in the investment process to mitigate these risks.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

The performance of the Scheme will be benchmarked with the following:

Benchmark (Total Returns Index): CRISIL Dynamic Gilt Index

Justification for use of Benchmark:

As approved by the Board of Directors/Trustees, CRISIL Dynamic Gilt Index is the benchmark selected for the scheme. The benchmark has been chosen as the benchmark on the basis of Investment pattern/objective of the scheme and the composition of the Index. Part III- OTHER DETAILS**A. COMPUTATION OF NAV**

The computation of NAV, valuation of securities / assets, accounting policies and standards would be in conformity with the SEBI (Mutual Funds) Regulations, 1996 and guidelines issued from time to time. The NAV per unit shall be calculated as follows:

$\frac{\text{(Market or Fair Value of Scheme's investments + Current Assets - Current Liabilities and Provisions)}}{\text{(No. of Units outstanding under the Scheme)}} = \text{NAV (Rs.)}$

The price arrived shall be rounded off up to four decimals.

An Illustration:

Assume that the Market or Fair Value of Scheme's investments is Rs. 1,00,00,000; Current asset of the scheme is Rs.25,00,000; Current Liabilities and Provisions is Rs. 15,00,000 and the No. of Units outstanding under the scheme are 5,00,000.

Thus, the NAV will be calculated as:

$$\text{NAV} = \frac{1,00,00,000 + 25,00,000 - 15,00,000}{5,00,000}$$

Therefore, the NAV of the scheme is Rs. 22.0000

The repurchase price of an open ended scheme shall not be lower than 97% of the NAV.

Methodology of calculation of repurchase price: For calculating the repurchase price, the exit load, if any, applicable at the time of investment shall be deducted from the applicable NAV of the Scheme.

For example: If the applicable NAV of the Scheme is Rs. 11 and the Exit Load applicable at the time of investment is 1% if redeemed before completion of 1 year from the date of allotment of units and the investor redeems units before completion of 1 year, then repurchase price will be calculated as follows:

Step 1: Applicable NAV * Exit Load at the time of investment in % = Exit Load Amount;
i.e. Rs. 11 * 1% = Rs. 0.11;

Step 2: Applicable NAV - Exit Load Amount = Repurchase price; i.e. Rs. 11 - Rs. 0.11 = Rs.10.89.

Methodology of calculation of sale price: The sale price shall be applicable NAV, subject to statutory levies applicable, if any.

For example: An investor invests Rs. 20,000/- and the current NAV is Rs. 20/- (assuming there is no statutory levy) then the sale/subscription price will be Rs. 20/- and the investor will receive 20000/20 = 1000 units.

For other details such as policies w.r.t computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

Section II

I. Introduction

A. Definitions/interpretation

In this Scheme Information Document, the words and expressions shall have the meaning specified in the following link, unless the context otherwise requires.

<https://www.canararobeco.com/documents/forms-downloads/disclosure-related-to-offer-documents/>

B. Risk Factors

Scheme Specific Risk Factors:

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

I. Risks associated with investments in Fixed Income Securities:

Price-Risk or Interest - Rate Risk: Fixed income securities such as government bonds, corporate bonds debentures, and money market instruments and derivatives run price - risk or interest - rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. It also depends upon the yield level at which the security is being traded.

Re - investment Risk: Investments in fixed income securities may carry re - investment risk as interest rates prevailing on the interest or coupon payment or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Liquidity or Marketability Risk: This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.

Pre-payment Risk: Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.

Basis Risk: The underlying benchmark of a floating rate security or a swap might become less active or may cease to exist and thus may not be able to capture the exact interest rate movements, leading to loss of value of the portfolio.

Spread Risk: In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.

Liquidity Risk: The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio

Credit Risk: In simple terms this risk means that the issuer of a debenture / bond or a money market instrument may default on interest payments or in paying back the principal amount on maturity. Even when there is no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however be noted that where the Scheme has invested in Government securities, there is no credit risk to that extent.

Liquidity Risk on account of unlisted securities: The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they have to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.

Settlement Risk: Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. e.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds, which are AA rated, are comparatively more risky than bonds, which are AAA rated.

II. Risk associated with investing in Derivatives:

As and when Scheme trades in the derivatives market, there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that loss may be sustained by the portfolio as a result of the failure of another party (usually referred as the "counter party") to comply with the terms of the derivatives contract. Other risk in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivatives are highly leveraged instruments. Even a small price movement in the underlying security could have a large impact on their value. Derivatives can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the Fund Manager to identify such opportunities. Identification and execution of the strategies to be pursued by the Fund Manager involve uncertainty and decision of Fund Manager may not always be profitable. No assurance can be given that the Fund Manager will be able to identify or execute such strategies. The risk associated with the use of derivatives is different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments. Derivatives may be riskier than other types of investments because they may be more sensitive to changes in economic or market conditions than other types of investments and could result in the losses that significantly exceed the Scheme's original investment. Certain derivatives may give rise to a form of leverage. Due to the low margin deposits normally required in trading financial derivative instruments, an extremely high degree of leverage is typical for trading in financial

derivative instruments. As a result, the Scheme may be more volatile than if the Scheme had not been leveraged because the leverage tends to exaggerate the effect of any increase or decrease in the value of the Scheme's portfolio. A relatively small price movement in a derivative contract may result in substantial losses to the investor.

Derivatives are also subject to the risk that changes in the value of a derivative may not correlate perfectly with the underlying asset, rate or index. The use of derivatives for hedging or risk management purposes or to increase income or gain may not be successful; resulting in losses to the Scheme and the cost of such strategies may reduce the Scheme's returns and increase the Scheme's potential for loss.

The Scheme may use derivatives to hedge market and currency risk, and for the purposes of efficient portfolio management. The use of derivatives may expose the Scheme to a higher degree of risk. In particular, derivative contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions are geared.

Trading in derivatives has the following risks:

- a) An exposure to derivatives in excess of the hedging requirements can lead to losses.
- b) An exposure to derivatives can also limit the profits from a genuine investment transaction.
- c) Efficiency of a derivative market depends on the development of a liquid and efficient market for underlying securities.

III. Risks associated with investment in Sovereign securities:

As in the case of any fund investing in Central & State Government Securities, the NAV of the Scheme will be sensitive to changes in interest/Bank/Prime Lending Rates. In case of an increase in any of the above rates, the market value of existing investments may fall leading to a fall in NAV.

Being dedicated Gilt Scheme, any disruption in normal functioning of the market or extreme ill-liquidity in any one of the investments may affect the ability of the fund manager. In the event of large number of repurchase requests, the time taken by the Scheme for repurchase may become significant.

IV. Risks Associated with investing in Money Market Instruments

- Investments in money market instruments would involve a moderate credit risk i.e. risk of an issuer's inability to meet interest and principal payments.
- Money market instruments may also be subject to price volatility due to factors such as changes in interest rates, the general level of market liquidity and market perception of creditworthiness of the issuer of such instruments.
- The NAV of the Units, to the extent that the corpus of the Scheme is invested in money market instruments, will be affected by changes in the level of interest rates. When interest rates in the market rise, the value of a portfolio of money market instruments can be expected to decline.

V. Risk factors associated with Creation of Segregated Portfolio

Investor holding units of segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer. Security comprising of segregated portfolio may not realise any value. Listing of units of segregated portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, trading price of units on the stock market may be significantly lower than the prevailing NAV.

VI. Risks associated with investing in foreign securities / overseas investments / offshore securities:

- Subject to necessary approvals and within the investment objectives of the Scheme, the Scheme may invest in overseas markets which carry risks related to fluctuations in the foreign exchange rates, the nature of the securities market of the country, repatriation of capital due to exchange controls and political circumstances.
- Since the Scheme would invest only partially in foreign securities, there may not be readily available and widely accepted benchmarks to measure performance of such Scheme. To manage risks associated with foreign currency and interest rate exposure, the Fund may use derivatives for efficient portfolio management and hedging and portfolio rebalancing and in accordance with conditions as may be stipulated under the Regulations and by RBI from time to time.
- Also, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual Securities, a specific sector or all sectors.
- Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they can afford to take the risk of losing their investment.
- The Fund Manager may invest in the Securities of smaller, lesser-known companies. These investments may involve greater risk and the possibility of greater portfolio price volatility than investing in larger, more mature or better-known firms. Amongst other reasons for the greater price volatility of Securities of small companies and unseasoned stocks are the less certain growth prospects of smaller firms, the lower degree of liquidity of the markets for such stocks, and the greater sensitivity of small companies to changing economic conditions. For example, these companies are associated with higher investment risk than that normally associated with larger firms due to the greater business risks of small size and limited product lines, markets, distribution channels and financial and managerial resources. Such Securities, including those of newer or recently restructured companies or those which may have experienced financial difficulties, may be more volatile in price than larger capitalized stocks
- Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or offer other exit options to the investors, including put options. The AMC may choose to invest in unlisted securities that offer attractive yields within the regulatory limit. This may however increase the risk of the portfolio. Additionally, the liquidity and valuation of the Scheme investments due to its holdings of unlisted securities may be affected if they have to be sold prior to the target date of disinvestment.

VII. Risks associated with investing in Tri Party Repo through CCIL (TREPS)

All the market repo and Tri-party repo, are settled through Clearing Corporation of India Limited (CCIL). CCIL acts as a Central Counterparty (CCP) to all trades received for settlement.

Risk of exposure in the TREPS, Repos & Reverse Repos in Government Securities/Treasury Bills emanates mainly on two counts – Risk of failure by a lender to make funds available or by a borrower to provide adequate collateral security to accept the fund at the first leg of borrowing and lending under Tri-party Repo transaction or Repo transactions in Government Securities / treasury Bills. Risk of default by a borrower in repayment.

VIII. Risk associated with investing in other mutual fund units

Investment in units of Mutual Fund scheme involves investment risks including the possible loss of principal. As the price / value / interest rates of the underlying securities in which the mutual fund scheme invests fluctuates, the value of units of mutual fund scheme may go up or down. The value of underlying securities may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods etc. The NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by liquidity in the securities market. Investment in units of mutual fund scheme is also exposed to risk of suspension of subscriptions / redemptions of the units, change in fundamental attributes etc. Since the Scheme may invest in schemes of Mutual Funds, scheme specific risk factors of each such mutual fund schemes will be applicable to the Scheme portfolio.

IX. Risk associated with Floating Rate Securities:

The Scheme may invest in floating rate instruments. These instruments' coupon will be reset periodically in line with the benchmark index movement. The changes in the prevailing rates of interest will affect the value of the Scheme's holdings and thus the value of the Scheme's Units. The Scheme could be exposed to the interest rate risk

- (i) to the extent of time gap in resetting of the benchmark rates, and
- (ii) to the extent the benchmark index fails to capture the interest rate movement.

Though the basis (i.e. benchmark) gets readjusted on a regular basis, the spread (i.e. mark-up) over benchmark remains constant. This can result in some volatility to the holding period return of floating rate instruments. If the floating rate asset is created by swapping the fixed return to a floating rate return, then there may be an additional risk of counter-party who will pay floating rate return and receive fixed rate return. Due to the evolving nature of the floating rate market, there may be an increased degree of liquidity risk in the portfolio from time to time.

X. Other Risks

Zero coupon or Deep Discount Bonds are debt obligations that do not entitle the holder to any periodic payment of interest prior to maturity or a specific date when the securities begin paying current interest and therefore, are generally issued and traded at a discount to their face value. The discount depends on the time remaining until maturity or the date when securities begin paying current interest. It also varies depending on the prevailing interest rates, liquidity of the security and the perceived credit risk of the issuer. The market rates of zero coupon securities are generally more volatile than the market price of securities that pay interest periodically and are likely to respond to changes in interest rates to a greater degree than other coupon bearing securities having similar maturities and creditworthiness.

In the event of substantial investment by the Sponsor/s, or its associates in the Scheme, any redemption by these entities may have an impact on the performance of the Scheme.

Canara Robeco Mutual Fund will not be responsible for any loss of tax benefits in the event of winding up of the Scheme(s) or for any amendments in the tax laws that may affect the tax benefits available under the Scheme(s). The tax benefits are based on the present laws and rules in force.

C. Risk mitigation strategies:

Since investing requires disciplined risk management, in order to protect the interests of investors, the AMC would incorporate adequate safeguards for controlling risks in the portfolio. As a prudent measure, the AMC has broad internal investment norms and investments made through the scheme would be in accordance with the investment objectives of the schemes and provisions of SEBI Regulations. Where required, scheme specific guidelines are also in place.

AMFI vide Best Practice Circular dated October 12, 2022 has provided the following liquidity management tools. The said tools have been incorporated in the Liquidity Risk Management Policy.

Liquidity Management Tool	Brief Description
Potential Risk Matrix Circular & Risk-o-meter Circular	The maximum risk that a scheme will run as per design and a measurement of that risk on a regular basis. Remedial measures also in place in case any of the design boundaries are breached.
Stress Testing Circular	Addresses the asset side risk from an Interest Rate, Credit and Liquidity Risk perspective at an aggregate portfolio level in terms of its impact on NAV.
RMC Circular	The RMC circular brings in ALM requirement which addresses potential Liquidity requirement over a 90-day period and required relevant asset side liquidity to be maintained.

Debt and Money Markets in India

The Indian debt market is today one of the largest in Asia and includes securities issued by the Government (Central & State Governments), public sector undertakings, other government bodies, financial institutions, banks and corporates. Government and public sector enterprises are the predominant borrowers in the markets. The major players in the Indian debt markets today are banks, financial institutions, mutual funds, insurance companies, primary dealers, trusts, pension funds and corporates. The Indian debt market is the largest segment of the Indian financial markets. The debt market comprises broadly two segments, viz. Government Securities market or G-Sec market and corporate debt market. The latter is further classified as market for PSU bonds and private sector bonds.

The Government Securities (G-Secs) market is the oldest and the largest component (70% share in market cap) of the Indian debt market in terms of market capitalization, outstanding securities and trading volumes. The G-Secs market plays a vital role in the Indian economy as it provides the benchmark for determining the level of interest rates in the country through the yields on the Government Securities which are referred to as the risk-free rate of return in any economy. Over the years, there have been new products introduced by the RBI like zero coupon bonds, floating rate bonds, inflation indexed bonds, etc.

The corporate bond market, in the sense of private corporate sector raising debt through public issuance in capital market, is only an insignificant part of the Indian Debt Market. A large part of the issuance in the non-Government debt market is currently on private placement basis.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) and Treasury Bills (issued by RBI). In a predominantly institutional market, the key money market players are banks, financial institutions, insurance companies, mutual funds, primary dealers and corporates. In money market, activity

levels of the Government and nongovernment debt vary from time to time. Instruments that comprise a major portion of money market activity include but not limited to:

- Overnight Call (i.e. market for overnight and term money between banks and institutions)
- Tri-party repo (TREPS)
- Repo/Reverse Repo Agreement (temporary sale with an agreement to buy back the securities at a future date at a specified price)
- Treasury Bills
- Government securities with a residual maturity of < 1 year.
- Commercial Paper
- Certificate of Deposit

Apart from these, there are some other options available for short tenure investments that include MIBOR linked debentures with periodic exit options and other such instruments. Though not strictly classified as Money Market Instruments, PSU / Financial Institution / Corporate paper with a residual maturity of < 1 year, are actively traded and offer a viable investment option.

The market has evolved in past 2-3 years in terms of risk premia attached to different class of issuers. Bank CDs have clearly emerged as popular asset class with increased acceptability in secondary market. PSU banks trade the tightest spreads over similar maturity sovereign papers, on the back of comfort of majority government holding. However, there has been increased activity in papers issued by private/foreign banks/NBFCs/companies in high-growth sector due to higher yields offered by them. Even though companies across these sectors might have been rated on a same scale, the difference in the yield on the papers for similar maturities reflects the perception of their respective credit profiles.

The following table gives approximate yields for some of the instruments:

Instrument	Yield Range as on 30 th September 2025	Yield Range as on 31 st October 2025
TREPS	5.00%-5.75%	5.25% - 6.25%
Market Repo	0.05%--6.15%	5.15% - 5.20%
3m Tbill	5.42%	5.44%
1y Tbill	5.56%	5.57%
10y G Sec	6.58%	6.53%
3m PSU Bank CD	5.75%-5.90%	5.87% - 6.01%
3m NBFC CP	6.60%-6.72%	6.60% - 6.70%
3m Non NBFC CP	5.83%-5.95%	5.93% - 6.05%
1y PSU Bank CD	6.35%	6.42%
1y NBFC CP	6.78%-6.98%	6.75%-6.90%
1y Non NBFC CP	6.40%-6.50%	6.45% - 6.50%
5y AAA Institutional Bond (PSU Bond)	6.97%-7.02%	6.83% - 6.88%
10y AAA Institutional Bond (PSU Bond)	7.08-7.13	6.95 – 7.00

These yields are indicative and do not indicate yields that may be obtained in future as interest rates keep changing consequent to changes in macro-economic conditions and RBI policy. The price and yield on various debt instruments fluctuate from time to time depending upon the macro economic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and yield vary according to maturity profile, credit risk etc.

The above investments shall be made in accordance with the SEBI Advisory email dated March 19, 2024 on 'Advisory for monitoring of industry wide limit of Overseas Investments in Mutual Funds'.

2. The allocation methodology of the aforementioned limits shall be as follows:

The Scheme may invest a maximum of US \$ 100 million in Foreign Securities (including overseas ETFs) subject to the limit specified in 1.1. and 1.2 above.

by the scheme. In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable.

16. To reduce interest rate risk in a debt portfolio, mutual funds may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$

In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.

Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, up to maximum of 20% of the net assets of the scheme, subject to the following:

- i. Exposure to IRFs is created only for hedging the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
- ii. Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (excluding the hedged portions, if any) and the IRF is at least 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of Paragraph 12.24.1 of SEBI Master Circular for Mutual Funds. The correlation should be calculated for a period of last 90 days.

Explanation: If the fund manager intends to do imperfect hedging up to 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:

- (a) The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or

- (b) The correlation for past 90 days between the part of the portfolio (excluding the hedged portions, if any) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.

- iii. At no point of time, the net modified duration of part of the portfolio being hedged should be negative.

- iv. The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of Paragraph 12.24.1 of SEBI Master Circular for Mutual Funds.

17. Total exposure of the Scheme in a particular sector (excluding investments in Bank CDs, TREPS, G-Secs, T-Bills, short term deposits of Scheduled Commercial Banks and AAA rated securities issued by Public Financial Institutions and Public Sector Banks) shall not exceed 20% of the net assets of the scheme; Provided that an additional exposure to financial services sector (over and above the limit of 20%) not exceeding 10% of the net assets of the scheme shall be allowed only by way of increase in exposure to Housing Finance Companies (HFCs). Further, an additional exposure of 5% of the net assets of the scheme

has been allowed for investments in securitized debt instruments based on retail housing loan portfolio and/or affordable housing loan portfolio; Provided further that the additional exposure to such securities issued by HFCs are rated AA and above and these HFCs are registered with National Housing Bank (NHB) and the total investment/ exposure in HFCs shall not exceed 20% of the net assets of the scheme.

18. The Fund shall ensure that total exposure of the Scheme in a group (excluding investments in securities issued by Public Sector Units, Public Financial Institutions and Public Sector Banks) shall not exceed 20% of the net assets of the scheme. Such investment limit may be extended to 25% of the net assets of the Scheme with the prior approval of the Board of Trustees (for this purpose, a group means a group as defined under regulation 2 (mm) of SEBI (Mutual Funds) Regulations, 1996 (Regulations) and shall include an entity, its subsidiaries, fellow subsidiaries, its holding company and its associates). Further, the investments by debt mutual fund schemes in debt and money market instruments of group companies of both the sponsor and the asset management company shall not exceed 10% of the net assets of the scheme. Such investment limit may be extended to 15% of the net assets of the scheme with the prior approval of the Board of Trustees As per the provisions of Para 12.9 of SEBI Master Circular for Mutual Funds dated June 27, 2024, the investments of mutual fund schemes in debt and money market instruments of group companies of both the sponsor and the asset management company of the mutual fund in excess of the limits specified therein, made on or before October 1, 2019 may be grandfathered till maturity date of such instruments. The maturity date of such instruments shall be as applicable on October 1, 2019.

All investment restrictions stated above shall be applicable at the time of making investment.

Apart from the Investment Restrictions prescribed under the Regulations, internal risk parameters for limiting exposure to a particular scrip or sector may be prescribed from time to time to respond to the dynamic market conditions and market opportunities.

The Trustees of the Mutual Fund may alter these limitations / objectives from time to time to the extent the SEBI Regulations change so as to permit the Scheme to make its investments in the full spectrum of permitted investments for the mutual fund in order to achieve its investment objectives. All investments of the Scheme will be made in accordance with the SEBI Regulations, including Seventh Schedule thereof.

C. Fundamental Attributes
