C. WHAT ARE THE INVESTMENT STRATEGIES?

This scheme will primarily invest for long term in fundamentally strong companies by considering the factors such as, but not limited to, financial strength, sustainable cash flows, earnings growth potential, attractiveness of valuation, scalability of business, management quality etc.

Portfolio Turnover Policy

The Scheme is an open-ended Scheme. Hence the fund managers have to execute transactions based on subscriptions and redemptions on a daily basis. Further as an active fund the scheme will take advantage of the opportunities that present themselves from time to time because of the inefficiencies in the securities markets. Hence it would be difficult to estimate with any reasonable measure of accuracy, the likely turnover in the portfolio. The AMC will endeavor to balance the increased cost on account of higher portfolio turnover with the benefits derived there from.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

BSE 100 TRI is the benchmark for UTI Large Cap Fund.

Part III – OTHER DETAILS

A. COMPUTATION OF NAV

- (a) The Net Asset Value (NAV) of the scheme shall be calculated by determining the value of the scheme's assets and subtracting therefrom the liabilities of the scheme taking into consideration the accruals and provisions. NAV shall be declared separately for the different Plans and Options of the scheme.
- (b) The NAV per unit of the scheme shall be calculated by dividing the NAV of the scheme by the total number of units issued and outstanding on the date of calculation under the scheme. The NAV shall be rounded off upto four decimal places for the scheme.

NAV of the Units under the Scheme shall be calculated as shown below:-

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

The NAV under the Scheme would be rounded off to 4 decimals and Units will be allotted upto three decimal places or such other formula as may be prescribed by SEBI from time to time.

Methodology for Calculation of Sale and Re-purchase price of the units of mutual fund scheme

a) In case of Purchase of mutual fund units

As per existing regulation, no entry load is charged with respect to applications for purchase / additional purchase of mutual fund units. Therefore, Computation of Sale Price is as below:

NAV	10.00
Entry Load	Not Applicable
Sale Price	10.00

This also means, Sale Price = NAV as on date of investment

b) Redemption/ Repurchase of mutual fund units

In case of redemption, repurchase price is calculated as below

Repurchase Price = NAV as on date of redemption - exit load (if applicable)

c) Illustration showing how repurchase price is calculated under 2 different scenarios-

Amount Invested- Rs.10,000/-

Date of Investment- 1st April 2022

NAV as on date of investment- Rs.10/- per unit

Exit load- For exit on or before 12 months from the date of allotment- 1%

For exit after 12 months from the date of allotment- Nil

No of units allotted at the time of purchase

Amount invested

= -----

NAV of the scheme on the date of investment

= 10,000 / 10 = 1000 units

Particulars	Scenario I	Scenario II
	Redemption during applicability of exit load	Redemption in case of Nil Exit load
Date of Redemption	On or before 31st March 2023	After 31st March 2023
NAV as on date of redemption	Rs. 12	Rs.12
Applicable Exit load	1%	Nil
Repurchase Price (NAV as on date of redemption-Exit load)	Rs.12 - (Rs.12*1%)	Rs.12- (Nil)
Repurchase Price on date of Redemption	Rs.11.88	Rs.12
Redemption Amount payable to investors (no of units allotted x Repurchase Price)	Rs.11.88 x 1000 = Rs.11,880/-	Rs.12 x 1000 Rs.12,000/-

Note- This is only for illustration purpose. Actual Exit load charged in the Scheme may vary.
The above mentioned example does not take into consideration any applicable statutory levies and taxes.

- (c) A valuation day is a day other than (i) Saturday and Sunday (ii) a day on which both the stock exchanges (BSE and NSE) and the banks in Mumbai are closed (iii) A day on which the purchase and redemption of units is suspended. SECTION II

I. INTRODUCTION

A. DEFINITIONS/INTERPRETATION –

Definitions / Interpretation is available under the following link on the website of UTI Mutual Fund – <https://www.utimf.com/downloads/data-related-to-sid>

B. RISK FACTORS

Standard Risk Factors

1. Investment in Mutual Fund Scheme Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
2. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
3. Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the scheme.
4. The name of the scheme does not in any manner indicate either the quality of the scheme or its future prospects and returns. There may be instances where no IDCW could be made.
5. The sponsors are not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution of Rs.10,000/- made by them towards setting up the Fund.
6. The present scheme is not a guaranteed or assured return scheme.
7. Statements/Observations made are subject to the laws of the land as they exist at any relevant point of time.
8. Growth, appreciation, IDCW and income, if any, referred to in this Scheme Information Document are subject to the tax laws and other fiscal enactments as they exist from time to time.
9. The NAVs of the Scheme may be affected by changes in the general markets conditions, factors and forces affecting capital market, in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures.
10. **Credit Risk:** Bonds / debentures as well as other money market instruments issued by corporates run the risk of down grading by the rating agencies and even default as the worst case. Securities issued by Central/State governments have lesser to zero probability of credit / default risk in view of the sovereign status of the issuer.
11. **Interest Rate Risk:** Bonds / Government securities which are fixed income securities, run price-risk like any other fixed income security. Generally, when interest rates rise, prices of fixed income securities fall and when interest rates drop, the prices increase. The level of interest rates is determined by the rates at which government raises new money through RBI, the price levels at which the market is already dealing in existing securities, rate of inflation etc. The extent of fall or rise in the prices is a function of the prevailing coupon rate, number of days to maturity of a security and the increase or decrease in the level of interest rates. The prices of Bonds / Government securities are also influenced by the liquidity in the financial system and / or the open market operations (OMO) by RBI.

Pressure on exchange rate of the rupee may also affect security prices. Such rise and fall in price of bonds / government securities in the portfolio of the scheme may influence the NAVs under the scheme as and when such changes occur.
12. **Liquidity Risk:** The Indian debt market is such that a large percentage of the total traded volumes on particular days might be concentrated in a few securities. Traded volumes for particular securities differ significantly on a daily basis. Consequently, the scheme might have to incur a significant “impact cost” while transacting large volumes in a particular security.

13. **Securities Lending:** It is one of the means of earning additional income for the scheme with a lesser degree of risk. Securities lending is lending of Securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent Securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the Securities borrowed. As per provision no. 12.11.1 of para 12.11 under Chapter 12 of SEBI Master Circular for Mutual Funds. The SLB shall be operated through Clearing Corporation/Clearing House of stock exchanges having nation-wide terminals who are registered as Approved Intermediaries (AIs).”

The risk is adequately covered as Securities Lending & Borrowing (SLB) is an Exchange traded product. Exchange offers an anonymous trading platform and gives the players the advantage of settlement guarantee without the worries of counter party default. However, the Fund may not be able to sell such lent securities during contract period or have to recall the securities which may be at higher than the premium at which the security is lent.

14. **Reinvestment Risk:** This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.
15. Money Market Securities are subject to the risk of an issuer’s inability to meet interest and principal payments on its obligations and market perception of the creditworthiness of the issuer.
16. **Investment in overseas markets:** The success of investment in overseas markets depends upon the ability of the fund manager to understand conditions of those markets and analyse the information which could be different from Indian markets. Operations in foreign markets would be subject to exchange rate fluctuation risk besides market risks of those markets.
17. **Trading in debt and equity derivatives involves certain specific risks like:**
 - a. Credit Risk: This is the risk of default by the counter party. This is usually to the extent of difference between actual position and contracted position. This risk is substantially mitigated where derivative transactions happen through clearing corporation.
 - b. Market Risk: Market movement may also adversely affect the pricing and settlement of derivative trades like cash trades.
 - c. Illiquidity Risk: The risk that a derivative product may not be sold or purchased at a fair price due to lack of liquidity in the market.
 - d. An exposure to derivatives can lead to losses. Success of dealing in derivatives depends on the ability of the Fund Manager to correctly assess the future market movement and in the event of incorrect assessment, if any, performance of the scheme could be lower.
 - e. Interest Rate Swaps (IRSs) and Forward Rate Agreements (FRAs) do also have inherent credit and settlement risks. However, these risks are substantially less as they are limited to the interest stream and not the notional principal amount.
 - f. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Notwithstanding such derivatives being used for limited purpose of hedging and portfolio balancing, the overall market in these segments could be highly speculative due to action of other participants in the market.
 - g. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.
 - h. The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
18. The aggregate value of “illiquid securities” of the scheme, which are defined by SEBI as non traded, thinly traded and unlisted equity shares, shall not exceed 15% of the total assets of the scheme and any illiquid securities held above 15% of the total assets shall be assigned zero value.
19. In the event of receipt of inordinately large number of redemption requests or a restructuring of the schemes’ portfolio, there may be delays in the redemption of units.

20. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the scheme's risk may increase or decrease depending upon its investment pattern. For e.g. Corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

21. Scheme specific risks factors

- a. Investors may note that AMC/Fund Manager's investment decisions may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing in equity/ equity related securities.
- b. The value of the investments in the scheme, may be affected generally by factors affecting securities markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or policies of any appropriate authority and other political and economic developments and closure of stock exchanges which may have an adverse bearing on individual securities, a specific sector or all sectors including equity and debt markets. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.
- c. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the equity and equity related investments made by the Scheme which could cause the scheme to miss certain investment opportunities. Different segments of the financial markets have different settlement periods, and such periods may be extended significantly by unforeseen circumstances leading to delays in receipt of proceeds from sale of securities. The inability of the Scheme to make intended securities purchases due to settlement problems could also cause the Scheme to miss certain investment opportunities. By the same rationale, the inability to sell securities held in the scheme's portfolio due to the absence of a well developed and liquid secondary market for debt securities would result, at times, in potential losses to the Scheme, in case of a subsequent decline in the value of securities held in the scheme's portfolio.
- d. Securities, which are not quoted on the stock exchanges, are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. Within the regulatory limits, the AMC may have chosen to invest in unlisted securities as permitted for investment by the scheme. Listed securities which may become unlisted in future may increase the risk in the portfolio.
- e. The Scheme may use various derivative products as permitted by the Regulations. Use of derivatives requires an understanding of not only the underlying instrument but also of the derivative itself. Other risks include the risk of mispricing or improper valuation and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Usage of derivatives will expose the Scheme to certain risks inherent to such derivatives.
- f. The Scheme may also invest in ADRs / GDRs as permitted by Reserve Bank of India and Securities and Exchange Board of India. To the extent that some part of the assets of the scheme may be invested in securities denominated in foreign currencies, the Indian Rupee equivalent of the net assets, distributions and income may be adversely affected by the changes in the value of certain foreign currencies relative to the Indian Rupee.
The repatriation of capital also may be hampered by changes in regulations concerning exchange controls or political circumstances as well as the application to it of other restrictions on investment
- g. The scheme intends to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the scheme will be subject to credit risk as well as settlement risk, which might affect the liquidity of the scheme.

22. Risk Factors specific to investments in Securitised Papers:

Types of Securitised Debt vary and carry different levels and types of risks. Credit Risk on Securitised Bonds depends upon the Originator and varies depending on whether they are issued with Recourse to Originator or otherwise. A structure with Recourse will have a lower Credit Risk than a structure without Recourse. Underlying assets in Securitised Debt may assume different forms and the general types of receivables include Auto Finance, Credit Cards, Home Loans or any such receipts. Credit risks relating to these types of receivables depend upon various factors including macro economic factors of these industries and economies. Specific factors like nature and adequacy of property mortgaged against these borrowings, nature of loan agreement/ mortgage deed in case of Home Loan, adequacy of documentation in case of Auto Finance and Home Loans, capacity of borrower to meet its obligation on borrowings in case of Credit Cards and intentions of the borrower influence the risks relating to the asset borrowings underlying the securitised debt.

Holders of the securitised assets may have low credit risk with diversified retail base on underlying assets especially when securitised assets are created by high credit rated tranches, risk profiles of Planned Amortisation Class tranches (PAC), Principal Only Class Tranches (PO) and Interest Only class tranches (IO) will differ depending upon the interest rate movement and speed of prepayment. Various types of major risks pertaining to Securitised Papers are as below:

Liquidity & Price risk

Presently, secondary market for securitised papers is not very liquid. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Delinquency and Credit Risk

Securitised transactions are normally backed by pool of receivables and credit enhancement as stipulated by the rating agency, which differ from issue to issue. The Credit Enhancement stipulated represents a limited loss cover to the Investors. These Certificates represent an undivided beneficial interest in the underlying receivables and there is no obligation of either the Issuer or the Seller or the originator, or the parent or any associate of the Seller, Issuer and Originator. No financial recourse is available to the Certificate Holders against the Investors' Representative. Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Investor Payouts may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of a Obligor to repay his obligation, the Servicer may repossess and sell the underlying Asset. However, many factors may affect, delay or prevent the repossession of such Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Asset may be sold may be lower than the amount due from that Obligor.

Prepayment Risk

Asset securitisation is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments. Full prepayment of underlying loan contract may take place during the tenure of the paper. In the event of prepayments, investors may be exposed to changes in tenor and reinvestment risk.

Risks Associated with scheme

The scheme intends to deploy funds in money market instruments to maintain liquidity. To the extent that some assets/funds are deployed in money market instruments, the scheme will be subject to credit risk as well as settlement risk which might affect the liquidity of the scheme.

23. Risk factors associated with investments in REITs and InvITs –

VOLATILITY OF DISTRIBUTIONS

The REITs & InvITs distributions will be based on the Net Distributable Cash Flows available for distribution, and not on whether the REITs & InvITs makes an accounting profit or loss. The amount of cash available for distribution principally depends upon the amount of cash that the REIT/InvIT receives as dividends or the interest and principal payments from portfolio assets. The cash flows generated by portfolio assets from operations may fluctuate based on, among other things

- Economic cycles and risks inherent in the business which may negatively impact valuations, returns and profitability of portfolio assets
- Force majeure events related such as earthquakes, floods etc. rendering the portfolio assets inoperable
- Debt service requirements and other liabilities of the portfolio assets
- Fluctuations in the working capital needs of the portfolio assets
- Ability of portfolio assets to borrow funds and access capital markets
- Changes in applicable laws and regulations, which may restrict the payment of dividends by portfolio assets
- Amount and timing of capital expenditures on portfolio assets
- Insurance policies may not provide adequate protection against various risks associated with operations of the REIT/InvIT such as fire, natural disasters, accidents

OPERATIONAL AND RESIDUAL RISKS

- REIT & InvITs Assets are subject to various risks that we may not be insured against, adequately or at all, including:
 - (i) Changes in governmental and regulatory policies;
 - (ii) Shortages of, or adverse price movement for, materials, equipment and plants;

- (iii) Design and engineering defects;
- (iv) Breakdown, failure or substandard performance of the underlying assets and other equipments;
- (v) Improper installation or operation of the underlying assets and other equipment;
- (vi) Terrorism and acts of war;
- (vii) Inclement weather and natural disasters;
- (viii) Environmental hazards, including earthquakes, flooding, tsunamis and landslide
- Any additional debt financing or issuance of additional Units may have a material, adverse effect on the REITs & InvITs distributions.
- Any future issuance of Units by REITs & InvITs or sales of Units by the Sponsor or any of other significant Unitholders may materially and adversely affect the trading price of the Units.
- The Valuation Report, and any underlying reports, and the valuation contained therein may not be indicative of the true value of the Project SPVs' assets.
- Risk related to business or industry sector.
- There can be no assurance that REITs & InvITs will be able to successfully undertake future acquisitions.

Market Risk:

REITs and InvITs are volatile and prone to price fluctuations on a daily basis owing to market movements. AMC/Fund Manager's investment decisions may not always be profitable, as actual market movements may be at variance with the anticipated trends. NAV of the Scheme is vulnerable to movements in the prices of securities invested by the scheme, due to various market related factors like changes in the general market conditions, factors and forces affecting capital market, level of interest rates, trading volumes, settlement periods and transfer procedures.

Liquidity Risk:

As the liquidity of the investments made by the scheme(s) could, at times, be restricted by trading volumes and settlement periods, the time taken by the Mutual Fund for liquidating the investments in the scheme may be high in the event of immediate redemption requirement. Investment in such securities may lead to increase in the scheme portfolio risk. The subsequent valuation of illiquid units may reflect a discount from the market price of comparable securities for which a liquid market exists.

Reinvestment Risk:

Investments in REITs & InvITs may carry reinvestment risk as there could be repatriation of funds by the Trusts in form of buyback of units or dividend pay-outs, etc. Consequently, the proceeds may get invested in assets providing lower returns.

Price-Risk or Interest-Rate Risk:

REITs & InvITs run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates.

Credit Risk:

In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. REITs & InvITs are likely to have volatile cash flows as the repayment dates would not necessarily be pre scheduled.

RISK MITIGATION FACTORS:

The UTI AMC Ltd. (AMC) endeavours to invest in REITs/InvITs, where adequate due diligence and research has been performed by AMC. The AMC also relies on its own research as well as third party research. This involves one-to-one meetings with the managements, attending conferences and analyst meets and also tele-conferences. The analysis will focus, amongst others, on the strength of management, predictability and certainty of cash flows, value of assets, capital structure, business prospects, policy environment, volatility of business conditions, etc.

24. PARTICIPATION IN REPO IN CORPORATE DEBT SECURITIES

In accordance with Para 12.18 under Chapter 12 of SEBI Master Circular on Mutual Funds read along with SEBI Circular no. SEBI/HO/IMD/POD-2/CIR/P /2023/0085 dated June 8, 2023 and SEBI Circular no. SEBI/HO/IMD/IMD PoD-2/P/CIR/2023/87 dated June 13, 2023 on 'Participation of mutual funds in repo in corporate debt securities', the Scheme may participate in repo transactions in Corporate Debt Securities, within the following overall framework, as per the guidelines of Securities and Exchange Board of India and Boards of UTI Trustee Co Pvt. Ltd & UTI Asset Management Company Ltd:

(A) Eligibility

The scheme can participate in repos on following corporate debt securities:

- Listed AA and above rated corporate debt securities
- Commercial Papers (CPs) and Certificate of Deposits (CDs)

For the purpose of consideration of credit rating of exposure on repo transactions for various purposes including for Potential Risk Class (PRC) matrix, liquidity ratios, Risk-o-meter etc., the same shall be as that of the underlying securities, i.e., on a look through basis.

(B) Gross Exposure Norms

- (i) The gross exposure of any scheme to 'corporate bonds repo transactions' shall not be more than 10% of the net assets of the concerned scheme.
- (ii) The cumulative gross exposure through 'corporate bonds repo transactions' along with equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs) and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- (iii) For transactions where settlement is guaranteed by a Clearing Corporation, the exposure shall not be considered for the purpose of determination of investment limits for single issuer, group issuer and sector level limits.

(C) Category of the counter-party to be considered for making investment

All entities eligible for transaction in corporate debt repos, as defined by Reserve Bank of India (RBI) and SEBI, shall be considered for repo transactions.

(D) Credit Rating of Counterparty to be considered for making investment

The scheme shall carry out repo transactions with only those counterparties, who have a credit rating of 'AA- and above' (Long term rating) or 'A1+' (Short term rating).

(E) Tenor of Repo

As a repo seller, the scheme can borrow for a period not more than six months as per the existing Regulation 44(2) of the SEBI (Mutual Funds) Regulations, 1996.

As a repo buyer, the scheme can lend for a maximum period of one year, subject to provision/s of the Scheme Information Document (SID).

(F) Tenor and Credit Rating of the Collateral The scheme shall participate in repo transactions in Corporate 'Bonds rated 'AA' and above ('A1+' in respect of money market instruments).

The tenor of the collateral shall not be more than 10 years.

(G) Minimum Haircut

In terms of RBI guidelines, repo transactions shall be subject to the following minimum haircuts:-

Rating of the Security	AAA	AA+	AA
Minimum Haircut	7.50%	8.50%	10%

The above are minimum stipulated haircuts where the repo period is overnight or where the re-margining frequency (in case of longer tenor repos) is daily. In all other cases, Fund Manager may adopt appropriate higher haircuts.

Depending on the market conditions and risk perceptions, the Fund Manager may seek higher haircut (while lending) or give a higher haircut (while borrowing).

(H) Risk factors and mitigation measures

(i) Illiquidity Risk

The repo market for corporate debt securities is over the counter (OTC) and illiquid. Hence, repo obligations cannot be easily sold to other parties.

Therefore, to mitigate such risks, it has been stipulated that gross exposure to Repo in corporate bonds would be limited to 10% of net assets of the concerned scheme. Further, the tenor of repo would be taken based on nature and unit holders' pattern of the scheme.

(ii) Counter-party Risk

Credit risk would arise if the counter-party fails to repurchase the security as contracted or if counterparty fails to return the security or interest received on due date. To mitigate such risks, the scheme shall carry out repo transactions with only those counterparties, which has a credit rating of 'A1+' or 'AA- and above'. In case of lending of funds as a repo buyer, minimum haircuts on the value of the collateral security have been stipulated, and we would receive the collateral security in the scheme's account before the money is lent to the counter-party. Overall, we would have a limited number of counter-parties, primarily comprising of Mutual Funds, Scheduled Commercial banks, Financial Institutions and Primary dealers.

Similarly, in the event of the scheme being unable to pay back the money to the counterparty as contracted, the counter-party may hurriedly dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Scheme. Thus, the Scheme may suffer losses in such cases. Sufficient funds flow management systems are in place to mitigate such risks.

(iii) Collateral Risk (as a repo buyer)

Collateral risks arise due to fall in the value of the security (change in credit rating and/or interest rates) against which the money has been lent under the repo arrangement. To mitigate such risks, we have stipulated the minimum credit rating of the issuer of collateral security ('AA' for long-term instruments / A1+ for money market instruments), maximum duration of the collateral security (10 years) and minimum haircuts on the value of the security.

25. PARTICIPATING IN DERIVATIVE PRODUCTS:

Derivatives:

A derivative instrument, broadly, is a financial contract whose payoff structure is determined by the value of an underlying security, index, interest rate etc. Thus a derivative instrument derives its value from some underlying variable.

Derivatives are further classified into:-

Futures
Options
Swaps

Futures: A futures contract is a standardized contract between two parties where one of the parties commits to sell, and the other to buy, a stipulated quantity of a security at an agreed price on or before a given date in future.

Options:

An option is a derivative instrument, which gives its holder (buyer) the right but not the obligation to buy or sell the underlying security at the contracted price on or before the specified date. The purchase of an option requires an up-front payment (premium) to the seller of the option.

There are two basic types of options, call option and put option.

- (a) Call option:** A call option gives the buyer of the option the right but not the obligation to buy a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.
- (b) Put option:** A put option gives the buyer of the option the right but not the obligation to sell a given quantity of the underlying asset, at a given price (strike price), on or before a given future date.

On expiry of a call option, if the market price of the underlying asset is lower than the strike price the call would expire unexercised. Likewise, if, on the expiry of a put option, the market price of the underlying asset is higher than that of the strike price the put option will expire unexercised.

The buyer/holder of an option can make loss of not more than the option premium paid to the seller/writer but the possible gain is unlimited. On the other hand, the option seller/writer's maximum gain is limited to the option premium charged by him from the buyer/holder but can make unlimited loss.

Swaps:

The exchange of a sequence of cash flows that derive from two different financial instruments. For example, the party receiving fixed in an ordinary Interest Rate Swap receives the excess of the fixed coupon payment over the floating rate payment. Of course, each payment depends on the rate, the relevant day count convention, the length of the accrual period, and the notional amount.

Debt derivatives are as of now customized over the counter products and there is no guarantee that these products will be available on tap. There are various possible combinations of strategies, which may be adopted, in a specific situation. The provision for trading in derivatives is an enabling provision and it is not binding on the Scheme to undertake trading on a day to day basis.

Some of the derivative techniques / strategies that may be used are:-

- (i) The scheme will use hedging techniques including dealing in derivative products – like futures and options, warrants, interest rate swaps (IRS), forward rate agreement (FRA) as may be permissible under SEBI (MF) Regulations.
- (ii) The scheme may take derivatives position based on the opportunities available and in line with the overall investment objective of the scheme. This may be taken to hedge the portfolio and rebalance the same.
- (iii) The Fund manager may use various strategies for trading in derivatives with a view to enhancing returns and taking cover against possible fluctuations in the market.
- (iv) The Fund Manager may sell the index forward by taking a short position in index futures to save on the cost of outflow of funds or in the event of negative view on the market.

• **REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME**

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the scheme. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2) (c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions shall also be complied within each calendar quarter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25% limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. RISK MITIGATION STRATEGIES:

The scheme may use various derivative products as permitted by the Regulations. Participating in derivatives is a highly specialized activity and entails greater than ordinary investment risks. Primarily, derivatives including Interest Rate Futures would be used for purpose of hedging and portfolio balancing.

The AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Risk indicators & internal limits are defined and judiciously monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigation measures.

Exposure limits as per provision no. 12.24.1 and 12.25.1 to 12.25.7 of para 12.24 and 12.25 under Chapter 12 of SEBI Master Circular for Mutual Funds:

- a. The cumulative gross exposure through equity, debt, derivative positions (including commodity and fixed income derivatives), repo transactions and credit default swaps in corporate debt securities, Real Estate Investment Trusts (REITs), Infrastructure Investment Trusts (InvITs), and such other securities/assets as may be permitted by the SEBI from time to time should not exceed 100% of the net assets of the scheme.
- b. Mutual Funds shall not write options or purchase instruments with embedded written options.
- c. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
- d. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

- e. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:-
 - (i) Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - (ii) Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point a.
 - (iii) Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - (iv) The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
- f. Mutual Funds may enter into plain vanilla interest rate swaps for hedging purposes. The counter party in such transactions has to be an entity recognized as a market maker by RBI. Further, the value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme. Exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme.
- g. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point a.

Definition of Exposure in case of Derivative Positions

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss.

Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

- (i) To reduce interest rate risk a scheme may hedge the portfolio or part of the portfolio (including one or more securities) on weighted average modified duration basis by using Interest Rate Futures (IRFs). The maximum extent of short position that may be taken in IRFs to hedge interest rate risk of the portfolio or part of the portfolio, is as per the formula given below:

$$\frac{(\text{Portfolio Modified Duration} * \text{Market Value of the Portfolio})}{(\text{Futures Modified Duration} * \text{Futures Price} / \text{PAR})}$$
- (ii) In case the IRF used for hedging the interest rate risk has different underlying security(s) than the existing position being hedged, it would result in imperfect hedging.
- (iii) Imperfect hedging using IRFs may be considered to be exempted from the gross exposure, upto maximum of 20% of the net assets of the scheme, subject to the following:
 - a) Exposure to IRFs is created **only for hedging** the interest rate risk based on the weighted average modified duration of the bond portfolio or part of the portfolio.
 - b) Mutual Funds are permitted to resort to imperfect hedging, without it being considered under the gross exposure limits, if and only if, the correlation between the portfolio or part of the portfolio (*excluding the hedged portions, if any*) and the IRF is atleast 0.9 at the time of initiation of hedge. In case of any subsequent deviation from the correlation criteria, the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative positions created for hedging shall be considered under the gross exposure computed in terms of paragraph 12.25.9.3 (i) & (ii) of para 12.25.9 under Chapter 12 of SEBI Master Circular for Mutual Funds. The correlation should be calculated for a period of last 90 days.
Explanation: If the fund manager intends to do imperfect hedging upto 15% of the portfolio using IRFs on weighted average modified duration basis, either of the following conditions need to be complied with:
 - i. The correlation for past 90 days between the portfolio and the IRF is at least 0.9 or
 - ii. The correlation for past 90 days between the part of the portfolio (*excluding the hedged portions, if any*) i.e. at least 15% of the net asset of the scheme (including one or more securities) and the IRF is at least 0.9.
 - c) At no point of time, the net modified duration of part of the portfolio being hedged should be negative.

- d) The portion of imperfect hedging in excess of 20% of the net assets of the scheme should be considered as creating exposure and shall be included in the computation of gross exposure in terms of paragraph 12.25.9.3 (iv) of para 12.25.9 under Chapter 12 of SEBI Master Circular for Mutual Funds.

e) **Risk involved in imperfect hedging using Interest Rate Futures (IRFs)**

With imperfect hedging, there is a risk that offsetting investments in a hedging strategy will not experience price changes in entirely same direction from each other. This imperfect correlation between the two investments creates the potential for excess gains or losses in a hedging strategy, thus adding risk to the position.

For example, in the attempt to hedge interest rate risk of a scheme (diversified portfolio of various debt securities) with a modified duration of say 6 years, the fund manager takes a short position in 10 year IRF having a modified duration of 6 years. The risk is that price changes in IRF and the scheme portfolio may not move in the same direction or in the same proportion.

Numerical Example:

To understand risk associated with imperfect hedging let us look at the following illustration:

On Nov 1, 2021 the fund buys Rs. 100 Crs of 10 year Power Finance Co. (corporate bond) with a modified duration of 6 years from the spot market at a yield of 7.50% (Price: Rs. 100). Subsequently, it is anticipated that the interest rate will rise in the near future. Therefore, to hedge the exposure in underlying corporate bond, the fund sells Nov 2021, 10 year benchmark Interest Rate Futures at yield of 7.00% (Price: Rs. 98.50) having a modified duration of 6 years.

Let us assume the following two scenarios:

Both the securities experience price changes in the same direction:

On Nov 15, 2021 the corporate bond and government bond yields move up by 10 basis points (0.10%) on back of deteriorating macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest Rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Profit on short selling of Interest Rate Futures = Rs. 100 Crs * 0.10% * 6 = Rs. 60 Lacs

This allows the fund manager to hedge the portfolio against interest rate movement using Interest Rate Futures.

Securities experience price changes in the opposite direction:

On Nov 15, 2021 the corporate bond yield moves up by 10 basis points (0.10%) on back of higher supply of corporate bonds & the government bond yield fell by 5 bps due to improving macro economic factors.

Loss in Corporate Bond Holding = Portfolio Value * Change in Interest rate * Modified Duration

Loss in Corporate Bond Holding = Rs. 100 Crs * 0.10% * 6 = (Rs. 60 Lacs)

Similarly, Loss on short selling of Interest Rate Futures = Rs. 100 Crs * 0.05% * 6 = (Rs. 30 Lacs)

On certain instances like the one illustrated above, it is observed that the co-relation between the corporate bonds and government securities may not be perfect over a short period of time leading to imperfect hedging which may result in higher loss/ gain from the strategy. The likelihood of such instances being prevalent on a sustainable basis is expected to be minimal due to strong correlation between government securities & bond markets over the medium to long term.

- (iv) The basic characteristics of the scheme should not be affected by hedging the portfolio or part of the portfolio (including one or more securities) based on the weighted average modified duration.

Explanation: In case of long term bond fund, after hedging the portfolio based on the modified duration of the portfolio, the net modified duration should not be less than the minimum modified duration of the portfolio as required to consider the fund as a long term bond fund.

- (v) The interest rate hedging of the portfolio should be in the interest of the investors.

The AMC retains the right to enter into such derivative transactions as may be permitted by the Regulations from time to time. For risks associated with investments in derivatives investors are requested to refer to Risk Factors of this Scheme Information Document.

Debt and Money market in India

(i) Debt Instrument Characteristics:

A Debt Instrument is basically an obligation which the borrower has to service periodically and generally has the following features:

Face Value	: Stated value of the paper / Principal Amount
Coupon	: Zero; fixed or floating
Frequency	: Semi-annual; annual, sometimes quarterly
Maturity	: Bullet, staggered
Redemption	: FV; premium or discount
Options	: Call/Put
Issue Price	: Par (FV) or premium or discount

A debt instrument comprises of a unique series of cash flows for each paper, terms of which are decided at the time of issue. Discounting these cash flows to the present value at various applicable discount rates (market rates) provides the market price.

(ii) Debt Market Structure:

The Indian Debt market comprises of the Money Market and the Long Term Debt Market.

Money market instruments have a tenor of less than one year while debt market instruments typically have a tenor of more than one year.

Money market instruments are Commercial Papers (CPs), Certificates of Deposit (CDs), Treasury bills (T-bills), Repos, Inter-bank Call money deposit, Triparty Repos on Government Securities or treasury bill etc. They are mostly discounted instruments that are issued at a discount to face value.

Long Term Debt market in India comprises mainly of two segments viz., the Government securities market and the corporate securities market.

Government securities includes central, state and local issues. The main instruments in this market are Dated securities (Fixed or Floating) and Treasury bills (Discounted Papers) The Central Government securities are

generally issued through auctions on the basis of 'Uniform price' method or 'Multiple price' method while State Govt. are through on-tap sales.

Corporate debt segment on the other hand includes bonds/debentures issued by private corporates, public sector units (PSUs) and development financial institutions (DFIs). The debentures are rated by a rating agency and based on the feedback from the market, the issue is priced accordingly. The bonds issued may be fixed or floating. The floating rate debt market has emerged as an active market in the rising interest rate scenario. Benchmarks range from Overnight rates or Treasury benchmarks.

Debt derivatives market comprises mainly of Interest Rate Swaps linked to Overnight benchmarks called MIBOR (Mumbai Inter Bank Offered Rate) and is an active market. Banks and corporate are major players here and Mutual Funds have also started hedging their exposures through these products.

Securitised Debt Instruments - Asset securitization is a process of transfer of risk whereby commercial or consumer receivables are pooled packaged and sold in the form of financial instruments. A typical process of asset securitization involves sale of specific Receivables to a Special Purpose Vehicle (SPV) set up in the form of a trust or a company. The SPV in turn issues financial instruments to investors, which are rated by an independent credit rating agency. Bank, Corporates, Housing and Finance companies generally issue securitised instruments. The underlying receivables generally comprise of loans of Commercial Vehicles, Auto and Two wheeler pools, Mortgage pools (residential housing loans), Personal Loan, credit card and Corporate receivables.

The instrument, which is issued, includes loans or receivables maturing only after all receivables are realized. However depending on timing of underlying receivables, the average tenure of the securitized paper gives a better indication of the maturity of the instrument.

(iii) Regulators: The RBI operates both as the monetary authority and the debt manager to the government. In its role as a monetary authority, the RBI participates in the market through open-market operations as well as through Liquidity Adjustment facility (LAF) to regulate the money supply. It also regulates the bank rate and repo rate, and uses these rates as indirect tools for its monetary policy. The RBI as the debt manager issues the securities at the cheapest possible rate. The SEBI regulates the debt instruments listed on the stock exchanges.

(iv) Market Participants:

Given the large size of the trades, the debt market has remained predominantly a wholesale market.

Primary Dealers

Primary dealers (PDs) act as underwriters in the primary market, and as market makers in the secondary market.

Brokers

Brokers bring together counterparties and negotiate terms of the trade.

Investors

Banks, Insurance Companies, Mutual Funds are important players in the debt market. Other players are Trusts, Provident and pension funds.

(vi) Trading Mechanism

Government Securities and Money Market Instruments

Currently, G-Sec trades are predominantly routed through NDS-OM which is a screen based anonymous order matching systems for secondary market trading in Government Securities owned by RBI. Corporate Debt is basically a phone driven market where deals are concluded verbally over recorded lines. The reporting of trade is done on the NSE Wholesale Debt Market segment.

Details under Foreign Account Tax Compliance provisions (commonly known as FATCA) / Foreign Tax Laws and Common Reporting Standard (CRS)	FATCA is United States (US) Federal Law, aimed at prevention of tax evasion by US citizens and residents ("US persons" as defined in the applicable extant laws of the United States of America) through use of offshore accounts. FATCA provisions are part of Hiring Incentives to Restore Employment (HIRE) Act, enacted by US Legislature. Under FATCA, withholding tax may be levied on certain US source income/receipt of the Schemes of the Mutual Fund, unless they are FATCA compliant.

	FATCA obligates foreign financial institutions (FFIs), including Indian financial institutions to provide the US Internal Revenue Service (IRS) with information and to report on the accounts held by specified US Persons as well as passive NFFEs in which controlling interest is held by specified US person. The term FFI is defined widely to cover a large number of non-US based financial service providers, such as mutual funds, depository participants, brokers, custodians, as well as banks. FATCA requires enhanced due diligence processes by the FFI so as to identify US reportable accounts. The identification of US person will be based on one or more of following “US indicia”- • Identification of the Account Holder as a US citizen or resident; • Unambiguous indication of a US place of birth; • Current US mailing or residence address (including a US post office box); • Current US telephone number; • Standing instructions to transfer funds to an account maintained in USA; • Current effective power of attorney or signing authority granted to a person with a US address; or • An “in-care of” or “hold mail” address that is the sole address that the Indian Financial Institution has on the file for the Account Holder. FATCA due diligence will be applicable to each unit holder (including joint holders) irrespective of the country of residence/citizenship, and on being identified as reportable person/specified US person, all folios/accounts will be reported. Such information may include (not limited to) their identity, direct or indirect beneficiaries, beneficial owners and controlling persons. Unit holders will therefore be required to comply with the request of the AMC / Fund to furnish such information as and when deemed necessary by the AMC / Fund in accordance with the Applicable Laws. FATCA provisions are relevant not only at on-boarding stage of unit holders but also throughout the life cycle of investment with the Mutual Fund. Unit holders therefore should immediately intimate to the Fund/the AMC, any change in their status with respect to FATCA related declaration provided by them previously. In case unit holder / investor fails to furnish the relevant information and/or documentation in accordance with the Applicable Laws, the AMC / Fund reserves the right to reject the application or redeem the units held directly or beneficially and may also require reporting of such accounts/levy of withholding tax on payments made to investors. Prospective investors / Unit holders should consult their own advisors to understand the implications of FATCA provisions/requirements. The AMC reserves the right to change/modify the provisions mentioned at a later date. Common Reporting Standard (CRS) – The New Global Standard for Automatic Exchange of Information On similar lines as FATCA, the Organisation of Economic Development (OECD), along with the G20 countries, of which India is a member, has released a “Standard for Automatic Exchange of Financial Account Information in Tax Matters”, in order to combat the problem of offshore tax evasion and avoidance and stashing of unaccounted money abroad, requiring cooperation amongst tax authorities. The G20 and OECD countries have together developed a Common Reporting Standard (CRS) on Automatic Exchange of Information (AEOI). All Applicants whose country of tax residence is not India shall fill in the prescribed FATCA & CRS Form.

	AMC reserves right to reject the application in case the applicant / investor fails to submit information /documentation for any of the above. Please refer to Instructions given in the FATCA/CRS Form before filling in the particulars and for further details relating to FATCA/CRS, refer to SEBI Circular Nos. CIR/MIRSD/2/2015 dated 26th August 2015 & CIR/MIRSD/3/2015 dated 10th September 2015 and guidelines /circulars issued by SEBI from time to time.
