I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors:

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 22.2 lacs made by it towards setting up the Fund.
- The present Scheme is not a guaranteed or assured return Scheme.
- ICICI Prudential Fixed Maturity Plan - Series 63 is the name of the Scheme and 3 Years Plan K is only the name of the Plan under the Scheme and does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The NAVs of the Scheme may be affected by changes in the general market conditions, factors and forces affecting capital market in particular, level of interest rates, various market related factors and trading volumes, settlement periods and transfer procedures.
- The liquidity of the Schemes' investments is inherently restricted by trading volumes in the securities in which it invests.
- Changes in Government policy in general and changes in tax benefits applicable to mutual funds may impact the returns to Investors in the Plans.
- Investors in the Scheme are not being offered any guaranteed/indicated returns.
- From time to time and subject to the Regulations, the Sponsors, the Mutual Funds and investment companies managed by them, their affiliates, their associate companies, subsidiaries of the Sponsors, and the AMC may invest either directly or indirectly in the Scheme. The funds managed by these affiliates, associates, the Sponsors, subsidiaries of the Sponsors and /or the AMC may acquire a substantial portion of the Scheme's Units and collectively constitute a major investor in the Scheme. Further, as per SEBI (Mutual Funds) Regulations, 1996, in case the AMC invests in any of the schemes managed by it, it shall not be entitled to charge any fees on such investments.
- The Scheme may invest in other schemes managed by the AMC or in the Schemes of any other Mutual Funds, provided it is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations. As per the Regulations, no investment management fees will be charged for such investments.
- From time to time and subject to the regulations, the AMC may invest in this Scheme. The decision to invest in the Scheme by the AMC will be based on parameters specified by the Board of the AMC.
- Mutual funds being vehicles of securities investments are subject to market and other risks and there can be no guarantee against loss resulting from investing in the Schemes. The various factors which impact the value of the Plan's investments include, but are not limited to, fluctuations in the bond markets, fluctuations in interest rates, prevailing political and economic environment, changes in government policy, factors specific to the issuer of the securities, tax laws in various countries, liquidity of the underlying instruments, settlement periods, trading volumes overseas etc.

- Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly the scheme's risk may increase or decrease depending upon its investment pattern. E.g. corporate bonds carry a higher amount of risk than Government securities. Further even among corporate bonds, bonds which are AAA rated are comparatively less risky than bonds which are AA rated.

- **Scheme Specific Risk Factors and Risk management strategies**

The Fund by utilizing a holistic risk management strategy will endeavor to manage risks associated with investing in debt markets. The risk control process involves identifying & measuring the risk through various risk measurement tools.

The Fund has identified following risks of investing in debt and have designed risk management strategies, which are embedded in the investment process to manage such risks.

Risk & Description specific to Debt	Risk mitigants / management strategy
Market Risk As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down	The fund will invest in a basket of debt and money market securities maturing on or before maturity of the fund with a view to hold them till the maturity of the fund. While the interim NAV will fluctuate in response to changes in interest rates, the final NAV will be more stable. To that extent the interest rate risk will be mitigated at the maturity of the scheme.
Liquidity or Marketability Risk This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.	The Scheme may invest in government securities, corporate bonds and money market instruments. While the liquidity risk for government securities, money market instruments and short maturity corporate bonds may be low, it may be high in case of medium to long maturity corporate bonds. Liquidity risk is today characteristic of the Indian fixed income market. The fund will however, endeavor to minimise liquidity risk by investing in securities having a liquid market.
Credit Risk Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security). Because of this risk corporate debentures are sold at a higher yield above those offered on Government Securities which are sovereign obligations and free of credit risk. Normally, the value of a fixed income security will fluctuate depending upon the changes in the perceived level of credit risk as well as any actual event of default. The greater the credit risk, the greater the yield required for someone to be compensated for the increased risk.	A traditional SWOT analysis will be used for identifying company specific risks. Management's past track record will also be studied. In order to assess financial risk a detailed assessment of the issuer's financial statements will be undertaken to review its ability to undergo stress on cash flows and asset quality. A detailed evaluation of accounting policies, off-balance sheet exposures, notes, auditors' comments and disclosure standards will also be made to assess the overall financial risk of the potential borrower. In case of securitized debt instruments, the fund will ensure that these instruments are sufficiently backed by assets.
Reinvestment Risk This risk refers to the interest rate levels at which cash flows received from the securities in the Scheme are reinvested. The additional income from reinvestment is the "interest on interest" component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.	Reinvestment risks will be limited to the extent of coupons received on debt instruments, which will be a very small portion of the portfolio value.

Risks associated with Investing in Securitised Debt

Securitization: Background, Risk Analysis, Mitigation, Investment Strategy and Other Related Information

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

Generally available asset classes for securitization in India are:

- Commercial vehicles
- Auto and two wheeler pools
- Mortgage pools (residential housing loans)
- Personal loan, credit card and other retail loans
- Corporate loans/receivables

In pursuance to SEBI communication dt: August 25, 2010, given below are the requisite details relating to investments in Securitized debt.

1. Risk profile of securitized debt vis-à-vis risk appetite of the scheme

   The Scheme aim to invest in a portfolio of fixed income securities/ debt instruments maturing on or before the maturity of the Plan under the Scheme. In this Scheme the fund manager ensures that the Scheme maturity matches the maturity of the underlying securities and as securitised debt instruments are relatively illiquid the fund manager buys these with the view to hold them till maturity. Investment in these instruments will help the fund in aiming at reasonable returns. These returns come with a certain degree of risks which are covered separately in the Scheme Information Document. Accordingly, the medium risk profile of the securitised debt instruments matches that of the prospective investors of this fund and hence can be considered in the fund universe.

2. Policy relating to originators based on nature of originator, track record, NPAs, losses in earlier securitized debt, etc.
3. Risk mitigation strategies for investments with each kind of originator

   For a complete understanding of the policy relating to selection of originators, we have first analysed below risks attached to a securitization transaction.

   In terms of specific risks attached to securitization, each asset class would have different underlying risks, however, residential mortgages are supposed to be having lower default rates as an asset class. On the other hand, repossession and subsequent recovery of commercial vehicles and other auto assets is fairly easier and better compared to mortgages. Some of the asset classes such as personal loans, credit card receivables etc., being unsecured credits in nature, may witness

higher default rates. As regards corporate loans/receivables, depending upon the nature of the underlying security for the loan or the nature of the receivable the risks would correspondingly fluctuate. However, the credit enhancement stipulated by rating agencies for such asset class pools is typically much higher, which helps in making their overall risks comparable to other AAA/AA rated asset classes.

The Scheme may invest in securitized debt assets. These assets would be in the nature of Asset Backed securities (ABS) and Mortgage Backed securities (MBS) with underlying pool of assets and receivables like housing loans, auto loans and single corporate loan originators. The Scheme intends to invest in securitized instruments rated AAA/AA by a SEBI recognized credit rating agency.

Before entering into any securitization transaction, the risk is assessed based on the information generated from the following sources:

1. Rating provided by the rating agency
2. Assessment by the AMC

Assessment by a Rating Agency

In its endeavor to assess the fundamental uncertainties in any securitization transaction, a credit rating agency normally takes into consideration following factors:

1. Credit Risk
Credit risk forms a vital element in the analysis of securitization transaction. Adequate credit enhancements to cover defaults, even under stress scenarios, mitigates this risk. This is done by evaluating following risks:

- Asset risk
- Originator risk
- Portfolio risk
- Pool risks

The quality of the pool is a crucial element in assessing credit risk. In the Indian context, generally, pools are 'cherry-picked' using positive selection criteria. To protect the investor from adverse selection of pool contracts, the rating agencies normally take into consideration pool characteristics such as pool seasoning (seasoning represents the number of installments paid by borrower till date: higher seasoning represents better quality), over dues at the time of selection and Loan to Value (LTV). To assess its risk profile vis-à-vis the overall portfolio, the pool is analyzed with regard to geographical location, borrower profile, LTV, and tenure.

2. Counterparty risk
There are several counterparties in a securitization transaction, and their performance is crucial. Unlike in the case of credit risks, where the risks emanate from a diversified pool of retail assets, counterparty risks result in either performance or non-performance. The rating agencies generally mitigate such risks through the usage of stringent counterparty selection and replacement criteria to reduce the risk of failure. The risks assessed under this category include:

- Servicer risk
- Co-mingling risk
- Miscellaneous other counterparty risks

3. Legal risks

The rating agency normally conducts a detailed study of the legal documents to ensure that the investors' interest is not compromised and relevant protection and safeguards are built into the transaction.

4. Market risks

Market risks represent risks not directly related to the transaction, but other market related factors, stated below, which could have an impact on transaction performance, or the value of the investments to the investors.

- Macro-economic risks
- Prepayment risks
- Interest rate risks

Other Risks associated with investment in securitized debt and mitigation measures

Limited Recourse and Credit Risk

Certificates issued on investment in securitized debt represent a beneficial interest in the underlying receivables and there is no obligation on the issuer, seller or the originator in that regard. Defaults on the underlying loan can adversely affect the pay outs to the investors (i.e. the Schemes) and thereby, adversely affect the NAV of the Scheme. While it is possible to repossess and sell the underlying asset, various factors can delay or prevent repossession and the price obtained on sale of such assets may be low. Housing Loans, Commercial Vehicle loans, Motor car loans, Two wheeler loans and personal loans will stake up in that order in terms of risk profile.

Risk Mitigation: In addition to careful scrutiny of credit profile of borrower/pool additional security in the form of adequate cash collaterals and other securities may be obtained to ensure that they all qualify for similar rating.

Bankruptcy Risk

If the originator of securitized debt instruments in which the Scheme invests is subject to bankruptcy proceedings and the court in such proceedings concludes that the sale of the assets from originator to the trust was not a 'true sale', and then the Scheme could experience losses or delays in the payments due.

Risk Mitigation: Normally, specific care is taken in structuring the securitization transaction so as to minimize the risk of the sale to the trust not being construed as a 'true sale'. It is also in the interest of the originator to demonstrate the transaction as a true sell to get the necessary revenue recognition and tax benefits.

Limited Liquidity and Price risk

Presently, secondary market for securitized papers is not very liquid. There is no assurance that a deep secondary market will develop for such securities. This could limit the ability of the investor to resell them. Even if a secondary market develops and sales were to take place, these secondary transactions may be at a discount to the initial issue price due to changes in the interest rate structure.

Risk Mitigation: Securitized debt instruments are relatively illiquid in the secondary market and hence they are generally held to maturity. The liquidity risk and HTM nature is taken into consideration at the time of analyzing the appropriateness of the securitization.

Risks due to possible prepayments: Weighted Tenor / Yield

Asset securitization is a process whereby commercial or consumer credits are packaged and sold in the form of financial instruments Full prepayment of underlying loan contract may arise under any of the following circumstances;

- Obligor pays the Receivable due from him at any time prior to the scheduled maturity date of that Receivable; or
- Receivable is required to be repurchased by the Seller consequent to its inability to rectify a material misrepresentation with respect to that Receivable; or
- The Servicer recognizing a contract as a defaulted contract and hence repossessing the underlying Asset and selling the same
- In the event of prepayments, investors may be exposed to changes in tenor and yield.

Risk Mitigation: A certain amount of prepayments is assumed in the calculations at the time of purchase based on historical trends and estimates. Further a stress case estimate is calculated and additional margins are built in.

Bankruptcy of the Investor's Agent
If Investor's agent becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that the recourse of Investor's Agent to the assets/receivables is not in its capacity as agent/Trustee but in its personal capacity, then an Investor could experience losses or delays in the payments due under the swap agreement.

Risk Mitigation: All possible care is normally taken in structuring the transaction and drafting the underlying documents so as to provide that the assets/receivables if and when held by Investor's Agent is held as agent and in Trust for the Investors and shall not form part of the personal assets of Investor's Agent.

Assessment by the AMC

Mapping of structures based on underlying assets and perceived risk profile
The scheme will invest in securitized debt originated by Banks, NBFCs and other issuers of investment grade credit quality and established track record. The AMC will evaluate following factors, while investing in securitized debt:

Originator

Acceptance evaluation parameters (for pool loan and single loan securitization transactions)
Track record
We ensure that there is adequate past track record of the Originator before selection of the pool including a detailed look at the number of issuances in past, track record of issuances, experience of issuance team, etc.

Willingness to pay
As the securitized structure has underlying collateral structure, depending on the asset class, historical NPA trend and other pool / loan characteristics, a credit enhancement in the form of cash collateral, such as fixed deposit, bank, guarantee etc. is obtained, as a risk mitigation measure.

Ability to pay
This assessment is based on a strategic framework for credit analysis, which entails a detailed financial risk assessment.

A traditional SWOT analysis is used for identifying company specific financial risks. One of the most important factors for assessment is the quality of management based on its past track record and feedback from market participants. In order to assess financial risk a broad assessment of the issuer's financial statements is undertaken to review its ability to undergo stress on cash flows and asset quality.
Business risk assessment, wherein following factors are considered:

- Outlook for the economy (domestic and global)
- Outlook for the industry
- Company specific factors

In addition a detailed review and assessment of rating rationale is done including interactions with the company as well as agency

Critical Evaluation Parameters (for pool loan and single loan securitization transactions)
Typically we would avoid investing in securitization transaction (without specific risk mitigant strategies / additional cash/security collaterals/ guarantees) if we have concerns on the following issues regarding the originator / underlying issuer:

1. High default track record/ frequent alteration of redemption conditions / covenants
2. High leverage ratios – both on a standalone basis as well on a consolidated level/ group level
3. Higher proportion of re-schedulement of underlying assets of the pool or loan, as the case may be
4. Higher proportion of overdue assets of the pool or the underlying loan, as the case may be
5. Poor reputation in market
6. Insufficient track record of servicing of the pool or the loan, as the case may be.

Advantages of Investments in Single Loan Securitized Debt

1. Wider Coverage: A Single Loan Securitized Debt market offers a more diverse range of issues / exposures as the Banks / NBFCs lend to larger base of borrowers.
2. Credit Assessment: Better credit assessment of the underlying exposure as the Banks / NBFCs ideally co-invest in the same structure or take some other exposure on the same borrower in some other form.
3. Better Structuring : Single Loan Securitized Debt investments facilitates better structuring than investments in plain vanilla debt instruments as it is governed by Securitization guidelines issued by RBI.
4. Better Legal documentation: Single Loan Securitized Debt structures involves better legal documentation than Non Convertible Debenture (NCD) investments.
5. End use of funds: Securitized debt have better standards of disclosures as well as limitation on end use of funds as compared to NCD investments wherein the end use is general corporate purpose.
6. Yield enhancer: Single Loan Securitized Debt investments give higher returns as compared to NCD investments in same corporate exposure.
7. Regulator supervision: Macro level supervision from RBI in Securitization Investments as compared to NCD investments.
8. Tighter covenants: Single Loan Securitized Debt structures involve tighter financial covenants than NCD investments.

Disadvantages of Investments in Single Loan Securitized Debt

1 Liquidity risk: Investments in Single Loan Securitized Debts have relatively less liquidity as compared to investments in NCDs.

2 Co-mingling risk: Servicers in a securitization transaction normally deposit all payments received from the obligors into a collection account. However, there could be a time gap between collection by a servicer and depositing the same into the collection account. In this interim period, collections from the loan agreements by the servicer may not be segregated from other funds of the servicer. If the servicer fails to remit such funds due to investors, investors in the Scheme may be exposed to a potential loss.

Table below lists the major risks and advantages of investing in Single Loan securitizations

Risks	**PTC**	**NCD**	**Risk Mitigants**
Liquidity Risk	Less	Relatively high	Liquidity Risk is mitigated by investing in structures which are in line with product maturity, also by taking cash collateral, bank guarantees etc
Commingling Risk	Relatively high	No	Management representations are taken from the servicer to avoid such risks
Advantages	**PTC**	**NCD**	
Wider Coverage /Issuers	High	Relatively less

Average single exposure range %	0.5%-3%	0.5%-3%	<1% of the Fund size	<1% of the Fund size	<1% of the Fund size	<1% of the Fund size

Notes:

1. Retail pools are the loan pools relating to Car, 2 wheeler, micro finance and personal loans, wherein the average loan size is relatively small and spread over large number of borrowers.
2. Information illustrated in the Tables above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors.

4. The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments

Majority of our securitized debt investments shall be in asset backed pools wherein we'll have underlying assets as Medium and Heavy Commercial Vehicles, Light Commercial Vehicles (LCV), Cars, and Construction Equipment etc. Where we invest in Single Loan Securitization, as the credit is on the underlying issuer, we focus on the credit review of the borrower. A credit analyst sets up limit for various issuers based on independent research taking into account their historical track record, prevailing rating and current financials.
In addition to the framework as per the table above, we also take into account following factors, which are analyzed to ensure diversification of risk and measures identified for less diversified investments:

- Size of the loan: We generally analyze the size of each loan on a sample basis and analyze a static pool of the originator to ensure the same matches the Static pool characteristics. Also indicates whether there is excessive reliance on very small ticket size, which may result in difficult and costly recoveries. To illustrate, the ticket size of housing loans is generally higher than that of personal loans. Hence in the construction of a housing loan asset pool for say Rs.1,00,00,000/- it may be easier to construct a pool with just 10 housing loans of Rs.10,00,000 each rather than to construct a pool of personal loans as the ticket size of personal loans may rarely exceed Rs.5,00,000/- per individual. Also to amplify this illustration further, if one were to construct a pool of Rs.1,00,00,000/- consisting of personal loans of Rs.1,00,000/- each, the larger number of contracts (100 as against one of 10 housing loans of Rs.10 lakh each) automatically diversifies the risk profile of the pool as compared to a housing loan based asset pool.

- Average original maturity of the pool: indicates the original repayment period and whether the loan tenors are in line with industry averages and borrower's repayment capacity. To illustrate, in a car pool consisting of 60-month contracts, the original maturity and the residual maturity of the pool viz. number of remaining installments to be paid gives a better idea of the risk of default of the pool itself. If in a pool of 100 car loans having original maturity of 60 months, if more than 70% of the contracts have paid more than 50% of the installments and if no default has

been observed in such contracts, this is a far superior portfolio than a similar car loan pool where 80% of the contracts have not even crossed 5 installments.

- Default rate distribution: We generally ensure that all the contracts in the pools are current to ensure zero default rate distribution. Indicates how much % of the pool and overall portfolio of the originator is current, how much is in 0-30 DPD (days past due), 30-60 DPD, 60-90 DPD and so on. The rationale here being, as against 0-30 DPD, the 60-90 DPD is certainly a higher risk category.

- Geographical Distribution: Regional/state/ branch distribution is preferred to avoid concentration of assets in a particular region/state/branch.

- Risk Tranching: Typically, we would avoid investing in mezzanine debt or equity of Securitized debt in the form of sub ordinate tranche, without specific risk mitigant strategies / additional cash / security collaterals/ guarantees, etc.

Also refer Paragraphs 2 and 3 above for risk assessment process.

5. & 6. Minimum retention period of the debt by originator prior to securitization and minimum retention percentage by originator of debts to be securitized

Refer the Table in paragraph 2 and 3 above, which illustrates the average seasoning of the debt by the originator prior to securitization. Further, also refer the same Table, which illustrates additional collaterals taken against each type of asset class, which is preferred over the minimum retention percentage by the originator of the loan.

7. The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the scheme in any asset are done based on the requirements of the scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitized debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest. In addition to internal controls in the fixed income investment process, there is regular monitoring by the compliance team, risk management group, and internal review teams. Normally the issuer who is securitizing instrument is in need of money and is unlikely to have long term surplus to invest in mutual fund scheme.

8. In general, the resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

The risk assessment process for securitized debt, as detailed in the preceding paragraphs, is same as any other credit. The investments in securitized debt are done after appropriate research by credit analyst. The ratings are monitored for any movement. Monthly Pool Performance MIS is received from the trustee and is analyzed for any variation. The entire securitized portfolio is published in the fact sheet and disclosed in the web site for public consumption with details of underlying exposure and originator.

Note: The information contained herein is based on current market conditions and may change from time to time based on changes in such conditions, regulatory changes and other relevant factors. Accordingly, our investment strategy, risk mitigation measures and other information contained herein may change in response to the same.

Credit Rating of the Transaction / Certificate

The credit rating is not a recommendation to purchase, hold or sell the Certificate in as much as the ratings do not comment on the market price of the Certificate or its suitability to a particular investor. There is no assurance by the rating agency either that the rating will remain at the same level for any given period of time or that the rating will not be lowered or withdrawn entirely by the rating agency.

Credit Evaluation Policy for investment in debt securities

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks so the Investment process is firmly research oriented. It comprises qualitative as well as quantitative measures. Qualitative factors like management track record, group companies, resource-raising ability, extent of availability of banking lines, internal control systems, etc are evaluated in addition to the business model and industry within which the issuer operates as regards industry/model-specific risks working capital requirements, cash generation, seasonality, regulatory environment, competition, bargaining power, etc. Quantitative factors like debt to equity ratio, Profit and loss statement analysis, balance sheet analysis are taken into further consideration.

Macroeconomic call is taken on interest rate direction by careful analysis of various influencing factors like Inflation, Money supply, Private sector borrowing, Government borrowing, Currency market movement, Central Bank policy, Local fiscal and monetary policy, Global interest rate scenario and Market sentiment. Interest rate direction call is supplemented by technical analysis of market and short term influencing factors like trader position, auction/issuance of securities, release of economic numbers, offshore market position, etc. Interest Rate direction call and anticipation of yield curve movement forms the basis of portfolio positioning in duration and spread terms.

Credit research is done on a regular basis for corporate having high investment grade rating. Credit research includes internal analysis of rating rationale, and financial statements (annual reports and quarterly earnings statements) of the issuer, for the last 1-3 years evaluating amongst other metrics, relevant ratios of profitability, capital adequacy, gearing, turnover and other inputs from external agencies. On an ongoing basis, the credit analyst keeps track of credit profile of the issuer, possible credit risks reflected in change in outlook of rating agencies, external developments affecting the issuer etc. Internal credit call is a pre-requisite for all investments since the investment universe is primarily high-grade credit instruments. Credit research is also used to minimize credit migration risk and for generating relative value trade ideas. Stable to higher rating on maturity vis-à-vis issuance is the guiding factor for investment decisions from credit point of view

POSITION OF DEBT MARKET IN INDIA

The debt market in India is estimated at about Rs. 20,00,000 crores as of now. A bulk of the debt market consists of Government Securities. Other instruments available currently include Corporate Debentures, Bonds issued by Financial Institutions, Commercial Paper, Certificates of Deposits and Securitized Debt. Securities in the Debt market typically vary based on their tenure and rating. Government Securities have tenures from one year to thirty years whereas the maturity period of the Corporate Debt varies from one year to fifteen years. Recently some banks have also issued perpetual bonds. Securities may be both listed and unlisted and increasingly most securities of maturities of over one year are being listed by issuers. While in the corporate bond market, deals are conducted over telephone and are entered on principal-to-principal basis, due to the introduction of the Reserve Bank of India's NDS- Order Matching system a significant proportion of the government securities market is trading on the new system. The yields and liquidity on various securities, currently, are as under:

Issuer	Instrument	Maturity	Yields	Liquidity
GOI	Treasury Bill	91 days	2.40%-4.10%	High

Fixed Income securities

The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks rigorous in depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. Rated debt instruments in which the Scheme invests will be of investment grade as rated by a credit rating agency. The AMC will be guided by the ratings of Rating Agencies as approved by SEBI. In case a debt instrument is not rated, such investments shall be made by an internal committee constituted by AMC to approve the investment in un-rated debt securities in terms of the parameters approved by the Board of Trustees and the Board of Asset Management Company.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. The AMC would use this analysis to attempt to predict the likely direction of interest rates and position the portfolio appropriately to take advantage of the same.

The Scheme could invest in Fixed Income Securities issued by government, quasi government entities, corporate issuers, structured notes and multilateral agencies in line with the investment objectives of the Scheme and as permitted by SEBI from time to time.

E.WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme will invest in securities with a view to hold them till the maturity. To that effect the Scheme will follow a buy and hold strategy to investment. The AMC aims to identify securities, which offer superior levels of yield at lower levels of risks. With the aim of controlling risks, rigorous in-depth credit evaluation of the securities proposed to be invested in will be carried out by the investment team of the AMC. The credit evaluation includes a study of the operating environment of the company, the past track record as well as the future prospects of the issuer, the short as well as longer-term financial health of the issuer. The AMC will also be guided by the ratings of Rating Agencies approved by SEBI.

In addition, the investment team of the AMC will study the macro economic conditions, including the political, economic environment and factors affecting liquidity and interest rates. Written statement on behalf of the Bank has been filed incorporating the above facts along with an affidavit disclosing the documents available with the Bank for inspection. However, the matter is not appearing in the list and hence no date is available.

7. Civil Suit No. 1559 of 1998: Anchor Electronics and Electricals Limited (AEEL) paid the outstanding dues for and on behalf of Kalpana Lamps and Components Limited (KLCL) who had availed of financial assistances from us and other lenders, and thus AEEL requested for assignment of the securities in its favour. AEEL filed a suit for specific performance but subsequently amended it to a money suit claiming Rs. 10.68 crores with interest thereon from us and others and the same is pending before the Bombay High Court. We have filed our written statement. AEEL has filed an application for release of title deeds of KLCL's properties at Ranipet to which we have given our no-objection certificate (NOC) however other charge holders are yet to give their NOC. We have received a letter from the office of the Official Liquidator, Chennai that a winding up order has been passed by the Madras High Court in respect of KLCL and that they have taken possession of KLCL's properties. 8. Hindustan Agrochemicals Ltd has filed a counter claim (OA No. 29/2001) against its secured lenders *interalia* ICICI Bank before the Debt Recovery Tribunal, Jaipur. Applicants have claimed financial losses of Rs.10 crores, alongwith interest at the rate of 18% per annum jointly and severally, against ICICI bank and other secured lenders. The applicants have claimed that on account of them being blacklisted by the RBI at the behest of ICICI Bank and other secured lenders (*i.e.* IFCI, IDBI, Central Bank of India), their reputation, image and prestige has been adversely affected and they have been deprived of their livelihood. We have filed our reply to the counterclaim. The application is pending adjudication and is fixed for hearing.

9. O.R.J.Electronic Oxides Limited – The erstwhile Bank of Madura (the Bank) granted lease finance of US $ 72,00,000 (INR Rs. 2578.00 lakhs) to the company on May 22, 1997 for import of capital goods from IPTE, Inc., USA. At the request of IPTE, USA, the entire lease finance was placed in FCNR deposits with EBOM in the name of ETKIF America Inc., Chennai, an Overseas Corporate Body. EBOM marked lien on these deposits towards adjustment of lease finance and remitted balance proceeds to ORJ towards equity participation by IPTE, USA. Later it was found on the

investigations conducted by DRI Officials of Customs, that Capital Goods imported were of Indian origin and the machineries were manufactured and exported from India and the same machineries were imported in the same container with inflated value.

Based on DRI's Report, Commissioner of Customs adjudicated and imposed fine of Rs.10.0 Mn on the Bank for alleged violation of Customs Act. On our appeal Customs Tribunal remanded the matter to another Commissioner for fresh adjudication. The Commissioner imposed Customs duty of Rs.12,86,61,198/- payable by Bank and ORJ jointly and severally, and increased penalty to Rs.5,00,00,000/- on the Bank. We filed an appeal before Customs Tribunal and obtained interim stay and waiver of pre-deposits. As the interim stay obtained by ORJ still continues and Customs Department is yet to take steps for vacating stay and inspite of our contentions before CESTAT to go ahead with the appeal filed by us, CESTAT adjourned the matter.

Enforcement Directorate initiated proceedings under FERA against our Bank and Official and imposed fine of Rs.1.0 Mn and Rs.0.1 Mn on the Bank and the Official respectively. We filed an appeal before the FERA Appellate Tribunal and obtained conditional stay. We also challenged the conditional order by filing a writ petition before MHC and obtained stay of further proceedings. The appeal filed by the Bank along with other appeals are being reposted to September 6, 2010 for final arguments.

CBI initiated criminal proceedings and filed charge sheet against Mr.V.Nachiappan, General Manager. We filed an application before MHC for quashing and obtained interim stay of the proceedings

Commissioner of Income Tax initiated proceedings against our Bank and disallowed depreciation under Lease Finance and levied Rs.15,83,42,475/-as Income Tax arrears. We filed an appeal before the Income Tax Appellate Tribunal against the order which is pending.

Sundaram Finance Ltd filed an application No.2035 of 2007 before High Court, Madras in the arbitration proceedings initiated against ETK Softek Private Limited and obtained Pro-Order dated February 23, 2007 against deposits held by us in the name of ETKIF America Inc and ETKIF Export Consultants. We entered appearance through our Advocate in the above application. The FCNR deposits held by us in the name of ETKIF America Inc has already been lien marked in our favour for the Income Tax liability and Sundaram Finance has no locus standi to claim the deposits in the name of ETKIF America Inc. The HC was pleased to consider our arguments and directed the Bank vide its order dated August 27, 2007 not to release the deposits in the name of ETK Export Consultants on account of Sundaram Finance ETK Export Consultants have filed an Appeal for setting aside the above order on January 2, 2008 with an application for condonation of delay. We have received the Court Summons only on October 24, 2008. We have entered appearance through our Counsel. The matter is yet to be listed
