### **C. WHAT ARE THE INVESTMENT STRATEGIES?**

The Scheme follows a passive investment strategy. The Scheme would invest not less than 95% of its corpus in securities comprising the underlying index and endeavour to track the benchmark index while minimizing the tracking error and therefore would follow a passive investment strategy. The scheme would aim to maintain least amount of cash & will also try & avoid investment in debt & money market securities. This would only be for the purpose of redemption requirements.

#### **PORTFOLIO TURNOVER:**

Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time.

The Scheme shall be a passively managed, open ended, exchange traded fund. It is therefore expected that there would be a number of subscriptions and redemptions on a daily basis through Authorised Participants and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition will be done within 30 days, if any, and corporate actions of securities included in Index.

The Scheme has no explicit constraints either to maintain or limit the portfolio turnover. It would be also difficult to have any reasonable accuracy in estimating the likely portfolio turnover. However, the fund manager intends to avoid any transactions in the portfolio unless there is any subscription, redemption or change in the underlying Index.

### Part III- OTHER DETAILS

#### A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of units outstanding under the Scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (Mutual Funds) Regulations, 1996 or such norms as may be specified by SEBI from time to time.

NAV of units under Scheme shall be calculated as shown below:

$$\text{NAV per unit} = \frac{\text{Market or Fair Value of the Scheme's Investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

The NAV of the Scheme will be calculated and disclosed at the close of every Business Day. Separate NAV will be calculated and announced for each of the Options of the respective Plan(s) at the close of every Business Day. The NAV will be calculated upto 4 decimals.

**Illustration of NAV:** If the net assets of the Scheme, after considering applicable expenses, are Rs.10,05,55,700 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: Rs. 10,05,55,700 / 1,00,00,000 units = Rs. 10.0556 per unit (rounded off to four decimals).

##### a) Methodology of calculating sale price

The price or NAV a unitholder is charged while investing in Scheme is called sale or subscription price. Pursuant to paragraph 10.4.1.a of SEBI Master Circular for Mutual Funds dated 19<sup>th</sup> May 2023, no entry load will be charged by the Scheme to the unitholders. Therefore,

$$\text{Sale/Subscription price} = \text{Applicable NAV (subject to Statutory levies applicable, if any.)}$$

**For Example:** An investor invests Rs. 20,000/- and the current NAV is Rs. 20/- then the sale/subscription price will be Rs. 20/- and the investor will receive  $20000/20 = 1000$  units

##### b) Methodology of calculating repurchase price

Repurchase or redemption price is the price or NAV at which scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price. Therefore,

$$\text{Repurchase or Redemption Price} = \text{Applicable NAV} * (1 - \text{Exit Load, if any}).$$

**For example,** If the Applicable NAV of the Scheme is Rs.10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the unitholder redeems units before completion of 1 year, then the repurchase or redemption price will be: Rs. 10 \* (1-0.02) =Rs.9.80.

The Redemption Price will not be lower than 95% of the NAV or as permitted / prescribed under the SEBI (Mutual Funds) Regulations, 1996 from time to time.

Please refer Statement of Additional Information for details such as policies with respect to computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc.

With reference to SEBI's letter no. SEBI/HO/ IMD/ IMD-SEC-3/ P/ OW/ 2023/ 5823/ 1 dated February 24, 2023, and AMFI Circular No. CIR/ ARN-23/ 2022-23 March 07, 2023, the B-30 incentive structure for new inflows has been kept in abeyance with effect from 01<sup>st</sup> March 2023 till the incentive structure is appropriately re-instated by SEBI with necessary safeguards.

In Addition to expenses under Regulation 52 (6) and (6A), AMC may charge GST on investment and advisory fees, expenses other than investment and advisory fees and brokerage and transaction cost as below:

- a. **GST on investment and advisory fees:** AMC may charge GST on investment and advisory fees of the scheme in addition to the maximum limit of TER as per the Regulation 52(6).

Any other expenses that are directly attributable to the Scheme, and permissible under SEBI (Mutual Funds) Regulations, 1996 from time to time, may be charged within the overall limits as specified in the Regulations.

The Scheme shall strive to reduce the level of these expenses so as to keep them well within the maximum limits currently allowed by SEBI and any revision in the said expenses limits by SEBI would be applicable.

All scheme related expenses including commission paid to distributors, by whatever name it may be called and in whatever manner it may be paid, shall necessarily be paid from the scheme only within the regulatory limits and not from the books of the AMC, its associate, sponsor, trustee or any other entity through any route.

Further, it is clarified that the brokerage and transaction cost incurred for the purpose of execution of trade shall be charged to the Scheme upto 12 bps and 5 bps for cash market transactions and derivative transactions respectively. ## Section II

### **I. Introduction**

#### **A. Definitions/interpretation**

##### **Definitions**

Definitions pertaining to the Scheme are available at the below link: <https://www.licmf.com/sid-disclosure>

##### **Interpretation**

For all purposes of the SID, except as otherwise expressly provided or unless the context otherwise requires:

- All references to the masculine shall include the feminine and all references, to the singular shall include the plural and vice-versa.
- All references to "Rs" refer to Indian Rupees. A "crore" means "ten million" and a "lakh" means a "hundred thousand".
- All references to timings relate to Indian Standard Time (IST).

#### **B. Risk factors**

##### **RISK FACTORS ASSOCIATED WITH INVESTMENTS IN FIXED INCOME SECURITIES:**

**Credit and Counterparty risk:** Credit risk or default risk refers to the risk that an issuer of a fixed income security may default (i.e., will be unable to make timely principal and interest payments on the security or honor its contractual obligations).

Counterparty risk refers to the counterparty's inability to honor its commitments (payment, delivery, repayment, etc.) and to risk of default. This risk relates to the quality of the counterparty to which the scheme has exposures. Losses can occur in particular for the settlement/delivery of financial instruments.

If the credit rating of an issue, issuer or counterparty is downgraded this may cause the value of the related debt securities in which the scheme has invested to fall.

**Liquidity Risk:** The liquidity of the scheme's investment is inherently restricted by trading volumes in the securities in which the Fund invests.

Even though the Government securities market is more liquid compared to other debt instruments, on occasions, there could be difficulties in transacting in the market due to extreme volatility or unusual constriction in market volumes or on occasions when an unusually large transaction has to be put through.

A lower level of liquidity affecting an individual security or an entire market at the same time may have an adverse bearing on the value of the scheme's assets. More importantly, this may affect the Fund's ability to sell particular securities quickly enough to minimize impact cost, as and when necessary to meet requirements of liquidity or to sell securities in response to triggers such as a specific economic/corporate event.

Trading volumes, settlement periods and transfer procedures may restrict the liquidity of a few or all of the investments and may affect the liquidity of the investments of the scheme. The scheme may be unable to implement purchase or sale decisions when the markets turn illiquid, missing some investment opportunities or limiting ability to face redemptions. The lack of liquidity could also lead to the risk that the sale price of a security could be substantially lower than the fair value of the security.

**Interest Rate Risk & Re-investment Risk:** The value of an investment may be affected by interest rate fluctuations. Interest rates may be influenced by several elements or events, such as monetary policy, the discount rate, inflation, etc.

The value of debt and fixed income securities held by the scheme generally will vary inversely with the changes in prevailing interest rates. In general, price of debt and fixed income securities go up when interest rates fall, and vice versa.

The investments made by the scheme are subject to reinvestment risk. This risk refers to the interest rate levels at which cash flows received from the securities in the scheme are reinvested. The additional income from reinvestment is the “interest on interest” component. The risk is that the rate at which interim cash flows can be reinvested may be lower than that originally assumed.

**Concentration Risk:** The scheme may pursue only a limited degree of diversification. It may invest a greater proportion of assets in the securities of very few issuers (within the limits permitted by regulation) or be concentrated on a few market sectors as compared to a diversified scheme. This could have implications on the performance of the scheme. The scheme may be more sensitive to economic, business, political or other changes and this may lead to sizeable fluctuation in the Net Asset Value of the scheme.

**Sovereign risk:** The Central Government of India is the issuer of the local currency debt in India. The Government raises money to meet its capital and revenue expenditure by issuing debt or discounted securities. Since payment of interest and principal amount has a sovereign status implying least probability of a default, such securities are known as securities with sovereign credit. It also implies that the credit risk on such Government securities is even lower than that on non-government securities with "AAA" rating and hence yields on government securities are even lower than yields on non-government securities with "AAA" rating.

**General Provisions:** Debt Securities are subject to the risk of an issuer’s inability to meet principal and interest payments on the obligation (credit risk) and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer and general market liquidity (market risk). The Fund Manager will consider both credit risk and market risk in making investment decisions for the Schemes. The timing of transactions in debt obligations, which will often depend on the timing of the Purchases and Redemptions in the Schemes, may result in capital appreciation or depreciation because the value of debt obligations generally varies inversely with the prevailing interest rates.

**Prepayment Risk:** A borrower may prepay a receivable prior to its due date. This may result in a change in the yield and tenor for the Schemes.

**Zero Coupon and Deferred Interest Bonds:** The Schemes may invest in zero coupon bonds and deferred interest bonds, which are debt obligations issued at a discount to their face value. Zero coupon bonds do not provide periodic interest payments and deferred interest bonds generally provide for a period of delay before the regular payment of interest begins. Such investments experience greater volatility in market value due to changes in interest rates than debt obligations which provide for regular payments of interest, and the Schemes may accrue income on such obligations even though it receives no cash.

**Market Risk:** All mutual funds and securities investments are subject to market risk and there can be no assurance / guarantee that the scheme’s objectives will be achieved. The securities that the scheme invests in would be exposed to price changes on a day-to-day basis. These price changes may occur due to instrument-specific factors as well as general macroeconomic conditions.

Markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. The scheme may be subject to price volatility due to factors such as interest

sensitivity, market perception, and creditworthiness of issuer and market liquidity. Different parts of the market can react differently to these developments. The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the value of the market as a whole.

#### **RISK FACTORS ASSOCIATED WITH INVESTMENTS IN LONG TERM GOVERNMENT SECURITIES:**

**Interest rate risk:** When interest rates rise, bond prices fall; conversely, when rates decline, bond prices rise. The longer the time to a bond's maturity, the greater will be its interest rate risk. Since the scheme would invest in government securities having maturity from 8 years to 13 years, interest rate risk would remain.

**Inflation risk:** Inflation causes tomorrow's money to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices.

**Legislative risk:** The risk that a change in the tax code could affect the value of taxable or tax-exempt interest income.

**Liquidity risk:** The risk that the fund may have difficulty finding a buyer when they want to sell and may be forced to sell at a significant discount to market value.

#### **RISKS ASSOCIATED WITH MARKET TRADING:**

**Absence of Prior Active Market:** Although the units of Exchange Traded Funds are listed on the Stock Exchange for trading, there can be no assurance that an active secondary market will develop or be maintained.

**Lack of Market Liquidity:** Trading in units of Exchange Traded Funds on the Stock Exchange on which it is listed may be halted because of market conditions or for reasons that, in the view of the concerned Stock Exchange or Market Regulator, trading in the Exchange Traded Fund Units is inadvisable. In addition, trading in the units of Exchange Traded Funds is subject to trading halts caused by extraordinary market volatility pursuant to 'circuit breaker' rules. There can be no assurance that the requirements of the concerned Stock Exchange necessary to maintain the listing of the units of Exchange Traded Funds will continue to be met or will remain unchanged.

**Units of Exchange Traded Funds May Trade at Prices Other than NAV:** Units of Exchange Traded Funds may trade above or below their NAV. The NAV of Units of Exchange Traded Funds may fluctuate with changes in the market value of a Scheme's holdings. The trading prices of units of Exchange Traded Fund will fluctuate in accordance with changes in their NAVs as well as market supply and demand. However, given that Exchange Traded Funds can be created / redeemed in Creation Units, directly with the fund, large discounts or premiums to the NAVs will not sustain due to arbitrage possibility available.

**Regulatory Risk:** Any changes in trading regulations by the Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/ discount to NAV.

**Political Risks:** Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in laws and regulations could have an effect on the value of investments. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.

**Right to Limit Redemptions:** The Trustee, in the general interest of the unit holders of the Scheme offered under this Offer Document and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day depending on the total “Saleable Underlying Stock” available with the fund.

**Redemption Risk** – The Unit Holders may note that even though this is an open ended scheme, the Scheme would ordinarily repurchase Units in Creation Unit size. Thus, unit holdings less than the Creation Unit size can normally only be sold through the secondary market, unless no quotes are available on the Exchange for 3 trading days consecutively.

**Passive Investments:** As LIC MF Nifty 8-13 yr G-Sec ETF is not actively managed, the underlying investments may be affected by a general decline in the Indian markets relating to its Underlying Index. The scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to take defensive positions in declining markets. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.

## **OTHER RISKS**

**Risk associated with inflation:** Over time, yields of short-term investments may not keep pace with inflation, leading to reduction in an investment’s purchasing power.

**Legal Risk:** The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.

**Valuation Risk:** This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.

**Past performance of the Sponsor/ the AMC/ the Mutual Fund is not indicative of the future performance of the Scheme. LIC MF Nifty 8-13 yr G-Sec ETF is the name of the Scheme and does not in any manner indicate either the quality of the Scheme; its future prospects or returns.**

## **RISK ASSOCIATED WITH PASSIVE INVESTMENTS**

- **Passive Investments:**

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks or to take defensive positions in declining markets. The value of the Scheme’s investments may be affected generally by factors affecting equity markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or

any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may fluctuate and can go up or down.

- **Market risk:**

Index Funds are typically designed to track the performance of certain indices, market sectors, or groups of assets such as stocks, bonds, or commodities. The Fund managers may use different strategies to achieve this goal, but in general they do not have the discretion to take defensive positions in declining markets. Investors must be prepared to bear the risk of loss and volatility associated with the underlying index/assets.

- **Tracking errors and Tracking difference:**

Tracking errors refer to the disparity in performance between an Index Fund and its underlying index/assets.

Tracking errors may arise due to various reasons like fees and expenses charged to the Scheme, IDCW received, corporate actions, change in the Underlying Index and the fund manager’s replication strategy etc. Tracking error has an impact on the performance of the Scheme. The Scheme’s returns may therefore deviate from those of its Underlying Basket. However, the Fund would endeavor to keep the tracking error as low as possible.

**C. Risk mitigation strategies**

Some of the risks and the corresponding risk mitigating strategies are listed below:

- **Risks associated with Debt and money market securities**

<b>Risk</b>	<b>Risk Mitigation Strategy</b>
<b>Interest Rate Risk</b> (The risk that changes in interest rates will affect the value of debt securities.)	Active duration management strategy; control portfolio duration and actively evaluate the portfolio structure with respect to existing interest rate scenario.
<b>Market Risk/Volatility Risk</b> (Risk arising due to vulnerability to price fluctuations and volatility, having material impact on the overall returns of the scheme.)	There is risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The Scheme will manage volatility risk through diversification.
<b>Concentration Risk</b> (The risk of loss due to a large exposure to a single issuer, sector, or type of security.)	Diversification by investing across the spectrum of issuers or sectors.

<p><b>Liquidity Risk</b></p> <p>(The risk that a debt instrument cannot be sold quickly enough without a significant price concession.)</p>	<p>Periodic Monitoring of portfolio liquidity.</p>
<p><b>Credit Risk</b></p> <p>(The risk that the issuer of a debt security will default on its payment obligations or the credit rating of the issuer gets downgraded.)</p>	<p>Investment universe carefully defined to include issuers with high credit quality; critical evaluation of credit profile of issuers on an on-going basis</p>
<p><b>Tracking Error risk (Volatility/ Concentration risk):</b></p> <p>The performance of the Scheme may not be commensurate with the performance of their underlying Index viz. BSE Sensex Index on any given day or over any given period.</p>	<p>Over a short to medium period, scheme may carry the risk of variance between portfolio composition and Benchmark. The objective of the Scheme is to track the performance of the Underlying Index over the same period, subject to tracking error. The Scheme would endeavor to maintain a low tracking error by actively aligning the portfolio in line with the index.</p>

**Risk Management framework to mitigate liquidity risk :**

1. **Potential Risk Class** – Defines to maximum potential risk a fund may take based on the credit rating and duration of the debt securities
2. **Borrowing** – A fund may borrow up to 20% of AUM (or such higher limits as may be allowed by the regulator from time to time) to meet redemption requirements.

**II. Information about the Scheme:**

**A. Where will the scheme invest?**
