Short Term Defensive Consideration:

As an index linked scheme, the investment policy is primarily passive management. However, as the above mentioned investment pattern is indicative and subject to the SEBI (MF) Regulations and Circulars issued thereunder, the same may vary from time to time. As per clause 1.14.1.2.b of Master Circular, the Fund Manager, may deviate from the above investment pattern for short term period on defensive considerations. The same will be rebalanced within 7 Business Days

C. Mutual Fund Units

Investments in Instruments stated above will be as per the limits specified in the asset allocation table as mentioned subject to restrictions / limits laid under SEBI (Mutual Funds) Regulations 1996 mentioned under section 'WHAT ARE THE INVESTMENT RESTRICTIONS?'

C. WHAT ARE THE INVESTMENT STRATEGIES?

The Scheme follows a passive investment strategy. The Scheme would invest not less than 95% of its corpus in securities comprising the underlying index and endeavour to track the benchmark index while minimizing the tracking error and therefore would follow a passive investment strategy. The scheme would aim to maintain least amount of cash & will also try & avoid investment in debt & money market securities. This would only be for the purpose of redemption requirements.

PORTFOLIO TURNOVER:

Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time.

The Scheme shall be a passively managed, open ended, exchange traded fund. It is therefore expected that there would be a number of subscriptions and redemptions on a daily basis through Authorised Participants and Large Investors. Generally, turnover will depend upon the extent of purchase and redemption of units and the need to rebalance the portfolio on account of change in the composition.

The Scheme has no explicit constraints either to maintain or limit the portfolio turnover. It would be also difficult to have any reasonable accuracy in estimating the likely portfolio turnover. However, the fund manager intends to avoid any transactions in the portfolio unless there is any subscription, redemption or change in the underlying Index.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

BSE Sensex Index TRI*

The performance will be benchmarked to the Total Returns Variant of the Index.

Justification for use of Benchmark: As the Scheme primarily invests in securities which are constituents of BSE SENSEX TRI. Thus, the composition of the aforesaid benchmark is such that it is most suited for comparing the performance of the Scheme.

- vi. Investments of AMC in the Scheme

The AMC may invest in the Scheme subject to the SEBI (MF) Regulations. However, the AMC will not charge Investment Management and Advisory fee on the investment made by it in the Scheme.

The market value of investment made by the AMC in the Scheme as on 30th September 2025 is available at <https://www.licmf.com/sid-disclosure>

Part III- OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme will be computed by dividing the net assets of the Scheme by the number of units outstanding under the Scheme on the valuation date. The Mutual Fund will value its investments according to the valuation norms, as specified in Schedule VIII of the SEBI (Mutual Funds) Regulations, 1996 or such norms as may be specified by SEBI from time to time.

NAV of units under Scheme shall be calculated as shown below:

$$\text{NAV per unit} = \frac{\text{Market or Fair Value of the Scheme's Investments} + \text{Current Assets} - \text{Current Liabilities and Provisions}}{\text{No. of Units outstanding under the Scheme}}$$

The NAV of the Scheme will be calculated and disclosed at the close of every Business Day. Separate NAV will be calculated and announced for each of the Options of the respective Plan(s) at the close of every Business Day. The NAV will be calculated upto 4 decimals. Units will be allotted upto 3 decimals

Illustration of NAV: If the net assets of the Scheme, after considering applicable expenses, are Rs.10,05,55,700 and units outstanding are 1,00,00,000 then the NAV per unit will be computed as follows: Rs. 10,05,55,700 / 1,00,00,000 units = Rs. 10.0556 per unit (rounded off to four decimals).

a) Methodology of calculating sale price

The price or NAV a unitholder is charged while investing in Scheme is called sale or subscription price. Pursuant to paragraph 10.4.1.a of SEBI Master Circular for Mutual Funds dated 19th May 2023, no entry load will be charged by the Scheme to the unitholders. Therefore,

Sale/Subscription price = Applicable NAV (subject to Statutory levies applicable, if any.)

For Example: An investor invests Rs. 20,000/- and the current NAV is Rs. 20/- then the sale/subscription price will be Rs. 20/- and the investor will receive $20000/20 = 1000$ units

b) Methodology of calculating repurchase price

Repurchase or redemption price is the price or NAV at which scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price. Therefore,

Repurchase or Redemption Price = Applicable NAV *(1- Exit Load, if any).

For example, If the Applicable NAV of the Scheme is Rs.10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the unitholder redeems units before completion of 1 year, then the repurchase or redemption price will be: Rs. $10 * (1-0.02) = \text{Rs.}9.80$.

The Redemption Price will not be lower than 97% of the NAV or as permitted / prescribed under the SEBI (Mutual Funds) Regulations, 1996 from time to time.

Please refer Statement of Additional Information for details such as policies with respect to computation of NAV, rounding off, investment in foreign securities, procedure in case of delay in disclosure of NAV etc.

B. NEW FUND OFFER (NFO) EXPENSES

This section does not apply to the Scheme, as the ongoing offer of the Scheme has commenced after the NFO, and the Units are available for continuous subscription and redemption.

Any payment towards brokerage and transaction cost, over and above the said 12 bps cash market transactions may be charged to the scheme within the maximum limit of Total Expense Ratio (TER) as prescribed under regulation 52 of the SEBI (Mutual Funds) Regulations.

These estimates have been made in good faith by the AMC and are subject to change inter-se. The total recurring expenses that can be charged to the Scheme will be subject to limits prescribed from time to time under the SEBI Regulations.

Any other expenses that are directly attributable to the Scheme, and permissible under SEBI (Mutual Funds) Regulations, 1996 from time to time, may be charged within the overall limits as specified in the Regulations.

The Scheme shall strive to reduce the level of these expenses so as to keep them well within the maximum limits currently allowed by SEBI and any revision in the said expenses limits by SEBI would be applicable.

All scheme related expenses including commission paid to distributors, by whatever name it may be called and in whatever manner it may be paid, shall necessarily be paid from the scheme only within the regulatory limits and not from the books of the AMC, its associate, sponsor, trustee or any other entity through any route.

Section II

I. Introduction

A. Definitions/interpretation

Definitions

Definitions pertaining to the Scheme are available at the below link: <https://www.licmf.com/sid-disclosure>

Interpretation

For all purposes of the SID, except as otherwise expressly provided or unless the context otherwise requires:

- All references to the masculine shall include the feminine and all references, to the singular shall include the plural and vice-versa.
- All references to "Rs" refer to Indian Rupees. A "crore" means "ten million" and a "lakh" means a "hundred thousand".
- All references to timings relate to Indian Standard Time (IST).

B. Risk factors

Scheme specific Risk factors:

RISK FACTORS ASSOCIATED WITH INVESTMENTS IN EQUITY AND EQUITY RELATED SECURITIES:

- Equity and Equity related instruments on account of its volatile nature are subject to price fluctuations on daily basis. The volatility in the value of the equity and equity related instruments is due to various micro and macro economic factors affecting the securities markets. This may have adverse impact on individual securities /sector and consequently on the NAV of Scheme.
- The inability of the Scheme to make intended securities purchases due to settlement problems, could cause the Scheme to miss certain investment opportunities as in certain cases, settlement periods may be extended significantly by unforeseen circumstances.
- Similarly, the inability to sell securities held in the schemes portfolio may result, at times, in potential losses to the scheme, should there be a subsequent decline in the value of the securities held in the schemes portfolio.
- Trading volumes, settlement periods and transfer procedures may restrict the liquidity of the investments. This may impact the ability of the unit holders to redeem their units. In view of this, the Trustee has the right, in its sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.
- Investments in equity and equity related securities involve high degree of risks and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.

RISKS ASSOCIATED WITH MARKET TRADING:

- **Absence of Prior Active Market:** Although the units of Exchange Traded Funds are listed on the Stock Exchange for trading, there can be no assurance that an active secondary market will develop or be maintained.
- **Lack of Market Liquidity:** Trading in units of Exchange Traded Funds on the Stock Exchange on which it is listed may be halted because of market conditions or for reasons that, in the view of the concerned Stock

Exchange or Market Regulator, trading in the Exchange Traded Fund Units is inadvisable. In addition, trading in the units of Exchange Traded Funds is subject to trading halts caused by extraordinary market volatility pursuant to ‘circuit breaker’ rules. There can be no assurance that the requirements of the concerned Stock Exchange necessary to maintain the listing of the units of Exchange Traded Funds will continue to be met or will remain unchanged.

- **Units of Exchange Traded Funds May Trade at Prices Other than NAV:** Units of Exchange Traded Funds may trade above or below their NAV. The NAV of Units of Exchange Traded Funds may fluctuate with changes in the market value of a Scheme’s holdings. The trading prices of units of Exchange Traded Fund will fluctuate in accordance with changes in their NAVs as well as market supply and demand. However, given that Exchange Traded Funds can be created/ redeemed in Creation Units, directly with the fund, large discounts or premiums to the NAVs will not sustain due to arbitrage possibility available.
- **Regulatory Risk:** Any changes in trading regulations by the Exchange or SEBI may affect the ability of market maker to arbitrage resulting into wider premium/ discount to NAV.
- **Political Risks:** Whereas the Indian market was formerly restrictive, a process of deregulation has been taking place over recent years. This process has involved removal of trade barriers and protectionist measures, which could adversely affect the value of investments. It is possible that the future changes in the Indian political situation, including political, social or economic instability, diplomatic developments and changes in laws and regulations could have an effect on the value of investments. Expropriation, confiscatory taxation or other relevant developments could affect the value of investments.
- **Right to Limit Redemptions:** The Trustee, in the general interest of the unit holders of the Scheme offered under this Offer Document and keeping in view of the unforeseen circumstances/unusual market conditions, may limit the total number of Units which can be redeemed on any Business Day depending on the total “Saleable Underlying Stock” available with the fund.
- **Redemption Risk** – The Unit Holders may note that even though this is an open ended scheme, the Scheme would ordinarily repurchase Units in Creation Unit size. Thus, unit holdings less than the Creation Unit size can normally only be sold through the secondary market, unless no quotes are available on the Exchange for 3 trading days consecutively.
- **Passive Investments:** As LIC MF BSE Sensex ETF is not actively managed, the underlying investments may be affected by a general decline in the Indian markets relating to its Underlying Index. The scheme invests in the securities included in its underlying index regardless of their investment merit.. Further, the fund manager does not make any judgment about the investment merit nor shall attempt to apply any economic, financial or market analysis.

RISK FACTORS ASSOCIATED WITH INVESTMENTS IN MONEY MARKET SECURITIES:

- **Price-Risk or Interest-Rate Risk:** money market instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing money market securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices is a function of the existing coupon, days to maturity and the increase or decrease in the level of interest rates. However, money market securities in this scheme are intended to be held till maturity. For such securities held till maturity, there will not be any interest rate risk at the end of the tenure.
- **Credit Risk:** In simple terms this risk means that the issuer of a debenture/ bond or a money market instrument may default on interest payment or even in paying back the principal amount on maturity. Even where no default occurs, the price of a security may go down because the credit rating of an issuer goes down. It must, however, be noted that where the Scheme has invested in Government securities, there

is no credit risk to that extent.

- **Liquidity or Marketability Risk:** This refers to the ease with which a security can be sold at or near to its valuation yield-to-maturity (YTM). The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. Liquidity risk is today characteristic of the Indian fixed income market.
- **Reinvestment Risk:** Investments in fixed income securities may carry reinvestment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.
- **Pre-payment Risk:** Certain fixed income securities give an issuer the right to call back its securities before their maturity date, in periods of declining interest rates. The possibility of such prepayment may force the fund to reinvest the proceeds of such investments in securities offering lower yields, resulting in lower interest income for the fund.
- **Concentration Risk:** ETF being a passive investment carries lesser risk as compared to active fund management. The portfolio follows the index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to tracking error. Thus there is no additional element of volatility or stock concentration on account of fund manager decisions.

OTHER RISKS

Risk associated with inflation: Over time, yields of short-term investments may not keep pace with inflation, leading to a reduction in an investment's purchasing power.

Legal Risk: The scheme may be affected by the actions of government and regulatory bodies. Legislation could be imposed retrospectively or may be issued in the form of internal regulations which the public may not be aware of. Legislation (including legislation relating to tax) or regulation may be introduced which inhibits the scheme from pursuing their strategies or which renders an existing strategy less profitable than anticipated. Such actions may take any form, for example nationalization of any institution or restrictions on investment strategies in any given market sector or changing requirements and imposed without prior warning by any regulator.

Valuation Risk: This risk relates to the fact that markets, in specific situations and due to lack of volumes of transactions, do not enable an accurate assessment of the fair value of invested assets. In such cases, valuation risk represents the possibility that, when a financial instrument matures or is sold in the market, the amount received is less than anticipated, incurring a loss to the portfolio and therefore impacting negatively the NAV of the scheme.

Past performance of the Sponsor/ the AMC/ the Mutual Fund is not indicative of the future performance of the Scheme.

RISK ASSOCIATED WITH PASSIVE INVESTMENTS

- **Passive Investments:**

As the scheme proposes to invest not less than 95% of the net assets in the securities of the benchmark Index, the Scheme will not be actively managed. The Scheme may be affected by a general decline in the Indian markets relating to its Underlying Index. The Scheme invests in the securities included in its underlying index regardless of their investment merit. The AMC does not attempt to individually select stocks. The value of the Scheme's investments may be affected generally by factors affecting equity markets, such as price and volume volatility in the capital markets, interest rates, currency exchange rates, changes in policies of the Government, taxation laws or any other appropriate authority policies and other political and economic developments which may have an adverse bearing on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units of the Scheme may fluctuate and can go

up or down.

- **Market risk:**

Index Funds are typically designed to track the performance of certain indices, market sectors, or groups of assets such as stocks, bonds, or commodities. The Fund managers may use different strategies to achieve this goal, but in general they do not have the discretion to take defensive positions in declining markets. Investors must be prepared to bear the risk of loss and volatility associated with the underlying index/assets.

- **Tracking errors and Tracking difference:**

Tracking errors refer to the disparity in performance between an Exchange Traded Fund and its underlying index/assets.

Tracking errors may arise due to various reasons like fees and expenses charged to the Scheme, Dividend received, corporate actions, change in the Underlying Index and the fund manager's replication strategy etc. Tracking error has an impact on the performance of the Scheme. The Scheme's returns may therefore deviate from those of its Underlying Basket. However, the Fund would endeavor to keep the tracking error as low as possible.

Tracking difference i.e. the annualized difference of daily returns between the index or goods and the NAV of the ETF will be disclosed on the website of the AMC and AMFI, on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units.

Tracking difference shall be targeted to be 50 bps (over and above actual TER charged). In case the same is not maintained, it shall be brought to the notice of trustees along with corrective actions taken by the AMC, if any.

Further, standard deviation of the difference in daily returns between the underlying index or goods and the NAV of the ETF/ Index Fund based on past one year rolling data shall not exceed 2%. In case of unavoidable circumstances in the nature of force majeure, which are beyond the control of the AMCs, the tracking error may exceed 2% and the same shall be brought to the notice of Trustees with corrective actions taken by the AMC, if any.

C. Risk mitigation strategies

This being a passive Scheme carries lesser risk as compared to active Scheme. The portfolio would replicate the underlying index and therefore the level of stock concentration in the portfolio and its volatility would be the same as that of the index, subject to tracking errors. Thus there would be no additional element of volatility or stock concentration on account of fund manager decisions. The fund manager would endeavor to keep cash levels at the minimal to control tracking errors. The Risk Mitigation strategy revolves around reducing the tracking error to the least possible through regular rebalancing of the portfolio, taking into account the change in weights of stocks in the Underlying Index as well as the incremental inflows into/redemptions from the Scheme. While these measures are expected to mitigate the above risks to a large extent, there can be no assurance that these risks would be completely eliminated.

II. Information about the Scheme:

A. Where will the scheme invest?

I. Investment in Equities and equity related instruments: The Scheme would invest in stocks comprising the BSE Sensex Index in the same proportion (weightage) as in the Index and endeavor to track the benchmark index.

D. Index methodology (for index funds, ETFs and FOFs having one underlying domestic ETF)

BSE SENSEX

Eligible Universe.

The index is derived from the constituents of the BSE 100. The inclusion of DVRs in the index will result in more than 30 stocks in the index. However, the number of companies in the index remains fixed at 30. Stocks in the eligible universe must satisfy the following eligibility factors in order to be considered for index inclusion: • Listing History. Stocks must have a listing history of at least six months at BSE. • Trading Days. The stock must have traded on every trading day at BSE during the six-month reference period. • Derivative Linkage. Stock must have a derivative contract. • Multiple Share Classes. DVRs satisfying the above eligibility criteria are aggregated with the company's common stock and index construction is done based on the aggregated company data as detailed below.

Index Construction.

1. All companies meeting the eligibility factors are ranked based on their average six-month float adjusted market capitalization. The top 75 are identified. 2. All companies meeting the eligibility factors are ranked again based on their average six-month total market capitalization. The top 75 are identified. 3. All companies identified based on steps 1 and 2 are then combined and sorted based on their annualized traded value. Companies with a cumulative annualized traded value greater than 98% are excluded. 4. The remaining companies are then sorted by average six-month float-adjusted market capitalization. Companies with a weight of less than 0.5% are excluded. 5. The remaining companies from step 4 are then ranked based on their average six-month float adjusted market

capitalization, and are selected for index inclusion according to the following rules: a. The top 21 companies (whether a current index constituent or not) are selected for index inclusion with no sector consideration. b. Existing constituents ranked 22 – 39 are selected in order of highest rank until the target constituent count of 30 is reached. c. If after this step the target constituent count is not achieved, then non-constituents ranked 22 – 30 are selected by giving preference to those companies whose common India Industry Classification Structure macro-economic indicator is underrepresented in the index as compared to the macro-economic indicator representation in the BSE AllCap. d. If after this step, the target constituent count is still not achieved, non-constituents are selected in order of highest rank until the target constituent count is reached. Annualized traded value is calculated by taking the median of the monthly medians of the daily traded values over the six-month period. The annualization is calculated using 250 trading days in a year. All additions and deletions are made at the discretion of index committee.

INTRODUCTION TO EXCHANGE TRADED FUND

Exchange Traded Funds are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. Exchange Traded Funds have a number of advantages over traditional open ended index funds as they can be bought and sold on the exchange at prices that are usually close to the actual intra-day NAV of the Scheme. Exchange Traded Funds are an innovation to traditional mutual funds as Exchange Traded Funds provide investors a fund that tracks the performance of an index with the ability to buy / sell on an intra-day basis. Unlike listed close ended funds, Exchange Traded Funds are structured in a manner which allows creating new units and redeeming outstanding units directly with the fund, thereby ensuring that Exchange Traded Funds trade close to their actual NAVs.

Exchange Traded Funds are usually passively managed funds wherein subscription / redemption of units works on the concept of exchange with underlying securities. In other words, large investors / institutions can purchase units by depositing the underlying securities with the fund / AMC and can redeem by receiving the underlying shares in exchange of units. Units can also be bought and sold directly on the exchange.

Exchange Traded Funds have all the benefits of indexing such as diversification, low cost and transparency. As Exchange Traded Funds are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

The structure of Exchange Traded Funds is such that it protects long-term investors from inflows and outflows of short-term investor. This is because the fund does not bear extra transaction cost when buying / selling due to frequent subscriptions and redemptions.

Tracking Error of Exchange Traded Funds is likely to be low as compared to a normal index fund. Due to the Creation / Redemption of units through the in-kind mechanism the fund can keep lesser funds in cash. Also, time lag between buying/ selling units and the underlying shares is much lower.

Exchange Traded Funds are highly flexible and can be used as a tool for gaining instant exposure to the equity markets, equitising cash or for arbitraging between the cash and futures market.

Benefits of EXCHANGE TRADED FUNDS

1. Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
2. Can be bought / sold anytime during market hours at prices that are expected to be close to actual NAV of the Scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
3. No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the net.
4. Ability to put limit orders.
5. Minimum investment for an Exchange Traded Fund is one unit.
6. Protects long-term investors from the inflows and outflows of short-term investors.
7. Flexible as it can be used as a tool for gaining instant exposure to the equity markets, hedging or for arbitraging between the cash and futures market.
8. Helps in increasing liquidity of underlying cash market.
9. An investor can get a consolidated view of his investments without adding too many different account statements, as Exchange Traded Funds will be in demat form.

Uses of EXCHANGE TRADED FUNDS:

1. **Investors with a long-term horizon:** Allows diversification of portfolio at one shot, thereby reducing scrip specific risk at a low cost.
2. **FPIs, Institutions and Mutual Funds:** Allows easy asset allocation, hedging at a low cost.

3. Investors with a shorter term horizon: Allows liquidity due to ability to trade during the day and expected to have quotes near NAV during the course of trading day.

Comparison of EXCHANGE TRADED FUNDS v/s Open Ended Funds v/s closes Ended Funds:

	Open Ended Fund	Closed Ended Fund	Exchange Traded Fund
Fund Size	Flexible	Fixed	Flexible
NAV	Daily	Daily	Real time (indicative NAV)
